

- Shortest cycle times
- Compact design
- Simple planning, installation and commissioning
- Installation and adaptation concept

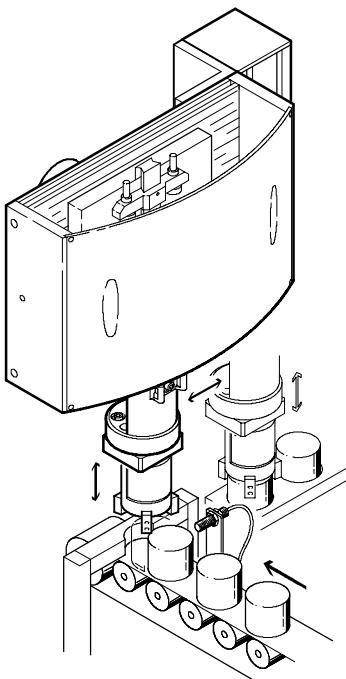

Handling module HSP

Key features at a glance

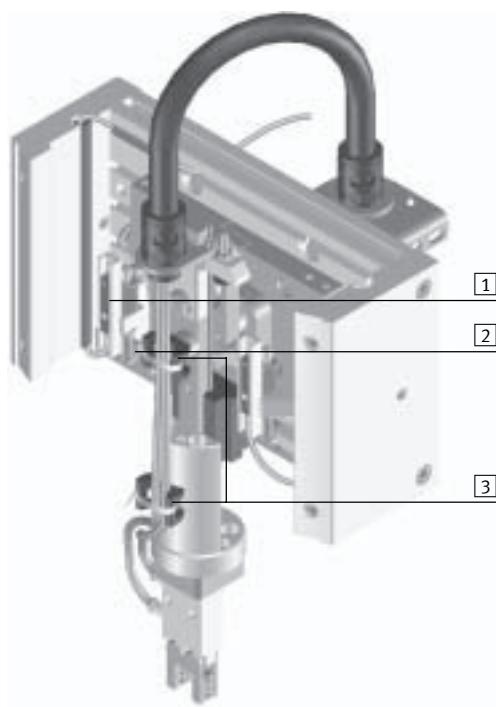

FESTO

High functionality

- Compact, space-saving design
- Simple commissioning
- Independent stroke adjustment
- Stroke range
 - Y-axis 52 ... 170 mm
 - Z-axis 20 ... 70 mm
- Working load up to 1.6 kg
- Cycle times of 0.6 ... 1.0 s attainable

The technology in detail

[1] Proximity sensor cables are installed via profile slots in the side cover and in the back plate.

[2] The pressure piece guarantees freedom from backlash and precision in the end positions and in the effective linear stroke along the Z-axis.

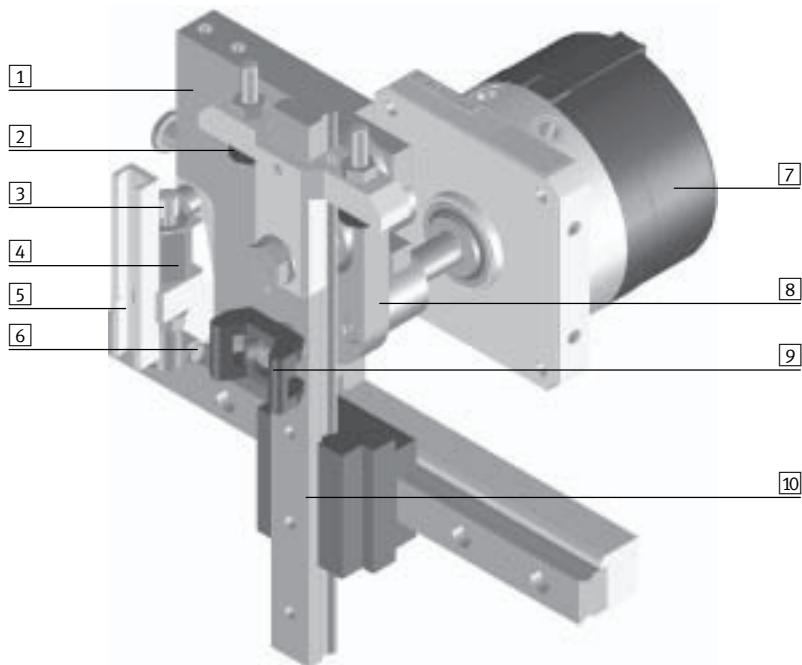

[3] Cable binder holders facilitate the secure routing of tubing and cables.

Handling module HSP

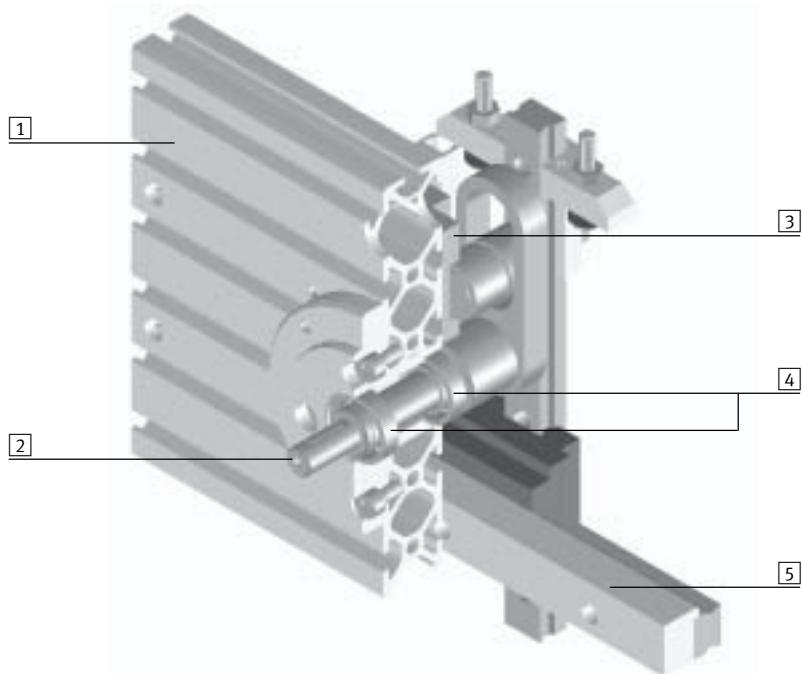

Key features at a glance

HSP design with swivel module DSM

- [1] Slotted guide plate
- [2] Adjustable stop
- [3] Shock absorber YSRW
- [4] Stop sleeve
- [5] Sensor rail
- [6] Pressure piece
- [7] Swivel module DSM
- [8] Swivel lever
- [9] Cable binder holder
- [10] Cross-guide

HSP design without drive (rear side)

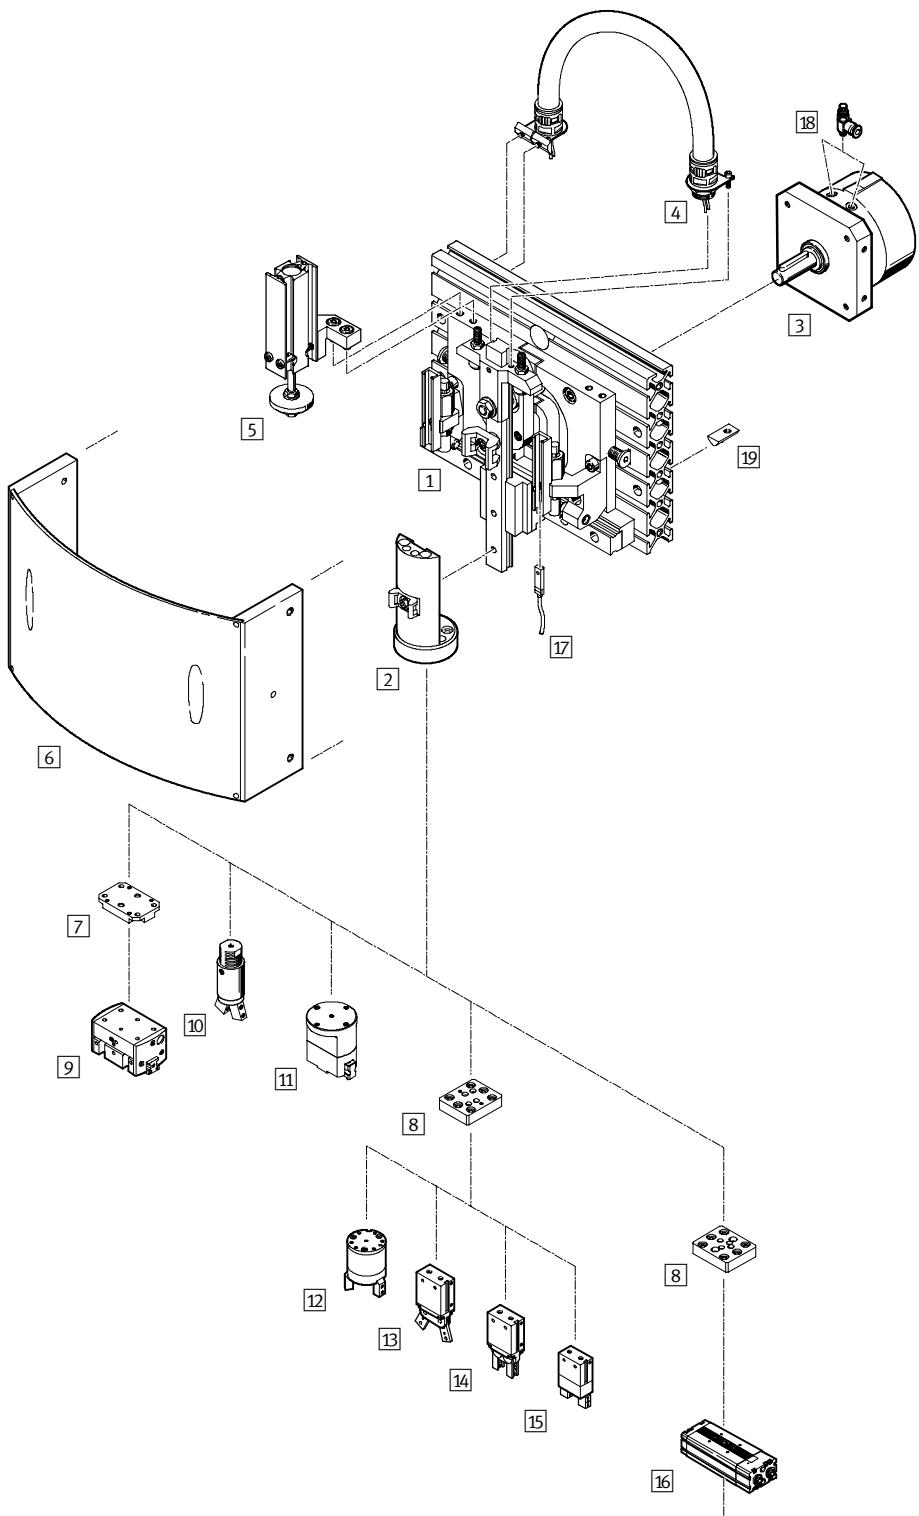

- [1] Back plate
- [2] Shaft with woodruff key
- [3] Slotted guide plate
- [4] Ball bearings
- [5] Aluminium rail for alignment of the guide plate

Function

- Diameter
12, 16 and 25
- Y-stroke length
52 ... 170
- Z-stroke length
20 ... 70

Construction

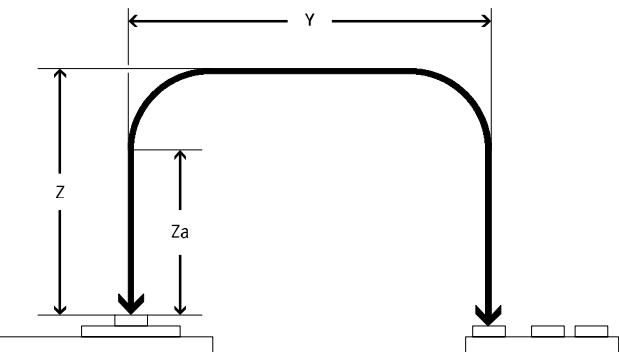

Size	HSP with swivel module DSM	HSP without drive
Pneumatic connection	M5	-
Mode of operation	Double-acting	-
Operating medium	Filtered compressed air, lubricated or unlubricated	-
Constructional design	Swivel module	Drive shaft
	Cross-guide	
	Guided motion sequence	
Cushioning	Shock absorber at both ends, soft characteristic curve	
Position sensing	Via proximity sensor	
Type of mounting	Via through-holes	
	Via slot nuts	
Mounting position	Vertical guide rail	

Operating and environmental conditions

Size	12	16	25
Operating pressure [bar] for HSP with DSM	4 ... 8		
Ambient temperature [°C]	0 ... +60		

Strokes [mm]

Size	12	16	25
Y Y-stroke	52 ... 68	90 ... 110	130 ... 170
Z Z-stroke	20 ... 30	35 ... 50	50 ... 70
Za Z working stroke	5 ... 15	5 ... 20	5 ... 25

Forces [N]

Size	12	16	25
Effective and pressing-in force at 6 bar for HSP with DSM	40	50	65
Permissible process force along Y-axis	30	35	50

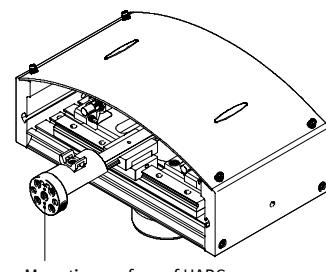

Handling module HSP

Technical data

Repetition accuracy [mm]			
Size	12	16	25
Repetition accuracy	±0.01	±0.01	±0.02

To ensure low-vibration operation, the working load should be mounted as close as possible to the guide rail of the handling module.

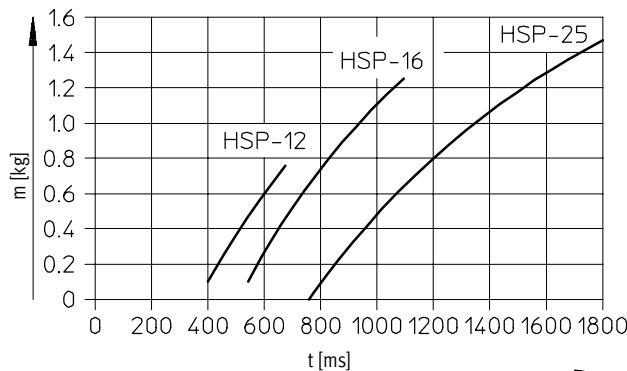

Repetition accuracy is guaranteed by mounting the working load (adapter plate, rotary drive and/or gripper, gripper finger, workpiece) within the mounting surface of the adapter kit HAPG.

Mounting surface of HAPG

Weights [g]			
Size	12	16	25
HSP-...-AP	1900	2900	6400
HSP-...-AP-SD	2600	3400	7600
HSP-...-AP-SD-WR	2800	3600	8100
HSP-...-AP-SD-WL	2800	3600	8100
HSP-...-AS	1800	2700	6200
HSP-...-AS-SD	2500	3200	7400

Travel times t as a function of working load m for variant HSP-...-AP

The travel time t is the time taken for the HSP to move from one end position to the other and back again.

The working load m is the load attached to the vertical guide rail (e.g. adapter, gripper, semi-rotary drive and workpiece)

Cycle times

The cycle time t_c comprises the travel time t and the dwell time t_d in the end positions.

$t_c = t + t_d$
The value must not fall below the minimum cycle time.

Size	12	16	25
Min. cycle time [s]	0.6	0.8	1.0

Problem example for HSP-12-AP

Step 1:
The following values are assumed:
Working load = 0.15 kg
Dwell time $t_d = 2 \times 50$ ms
(50 ms per end position)

Step 2:
The travel time can be determined from the graph:
 $t = 400$ ms

Step 3:
This gives us a cycle time:
 $t_c = 400$ ms + 100 ms = 500 ms

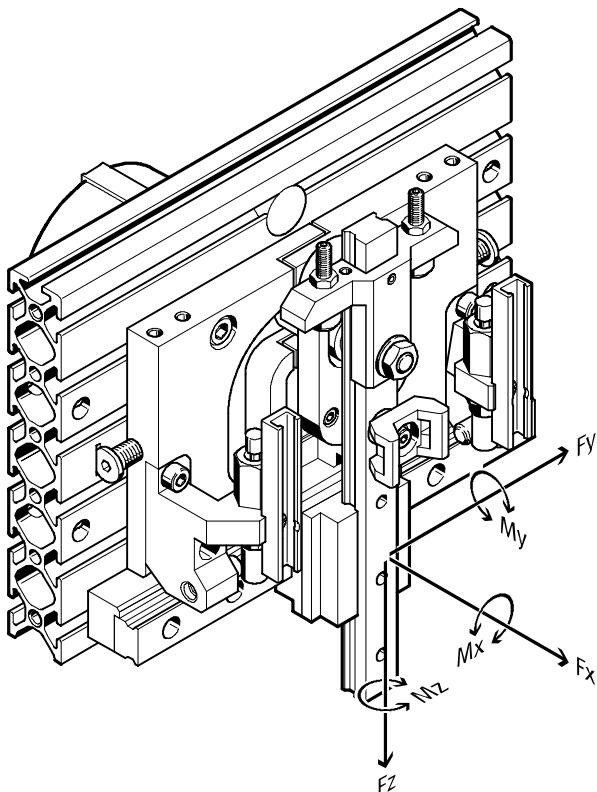

Step 4:
The table gives us a min. cycle time of 600 ms. This means that the movement has to be controlled.

Handling module HSP

Technical data

Permissible static/dynamic characteristic load values

Cross-guide

Combined load

The torques apply to the centre of the vertical guide.

$$\frac{M_x}{M_{x\text{perm.}}} + \frac{M_y}{M_{y\text{perm.}}} + \frac{M_z}{M_{z\text{perm.}}} \leq 1$$

The following torque equation must be satisfied with combined load:

Dynamic characteristic load values

Size	12	16	25
Max. torques [Nm] M _{x_{perm.}} , M _{y_{perm.}} , M _{z_{perm.}}	1.1	2.4	3.2

Combined load

The torques apply to the centre of the vertical guide.

$$\frac{M_{ox}}{M_{ox\text{perm.}}} + \frac{M_{oy}}{M_{oy\text{perm.}}} + \frac{M_{oz}}{M_{oz\text{perm.}}} \leq 1$$

The following torque equation must be satisfied with combined load:

Static characteristic load values

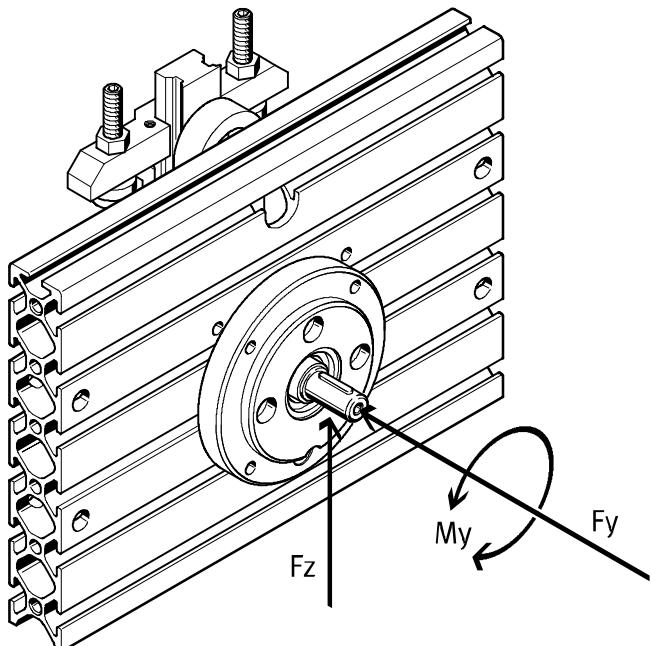

Size	12	16	25
Max. torques [Nm] M _{x_{perm.}} , M _{y_{perm.}} , M _{z_{perm.}}	5	10	15

Handling module HSP

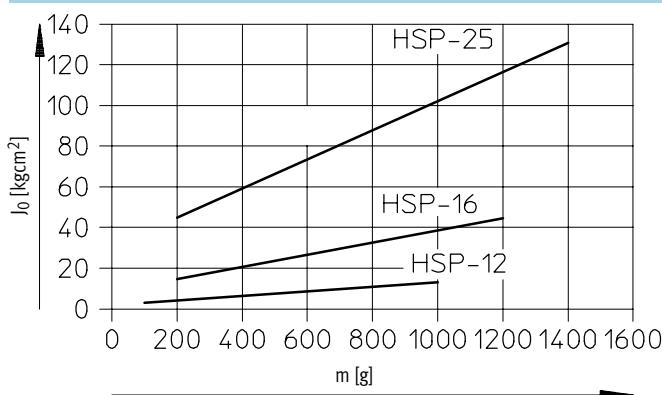

Technical data

Permissible static/dynamic characteristic load values

Without drive

**Characteristic load values**

Size	12	16	25
Max. axial force $F_{y\text{perm.}}$ [N]	18	30	50
Max. radial force $F_{z\text{perm.}}$ [N]	45	75	120
Max. driving torque $M_{y\text{perm.}}$ [Nm]	1.25	2.5	5

Mass moment of inertia J_0 as a function of the working load m (for cylinder sizing)

Handling module HSP

Technical data

FESTO

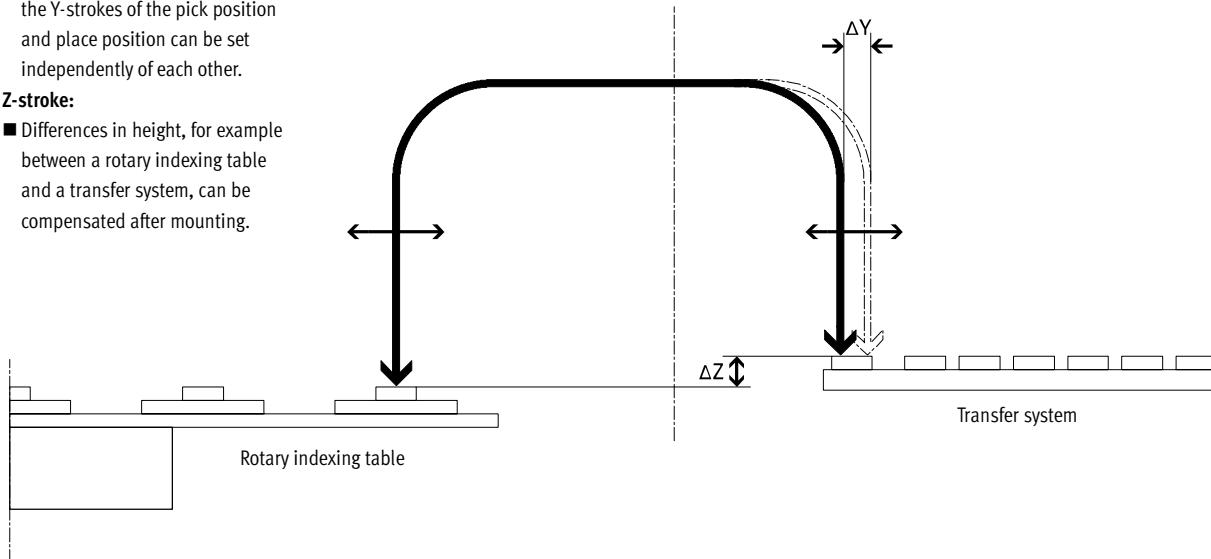

Stroke adjustment

Y-stroke:

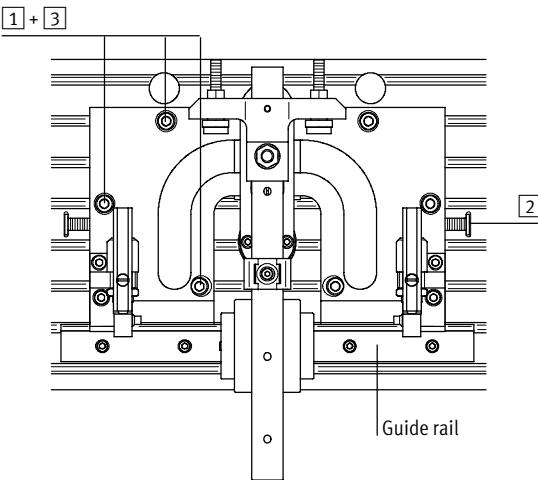

- Once the HSP has been mounted, the Y-strokes of the pick position and place position can be set independently of each other.

Z-stroke:

- Differences in height, for example between a rotary indexing table and a transfer system, can be compensated after mounting.

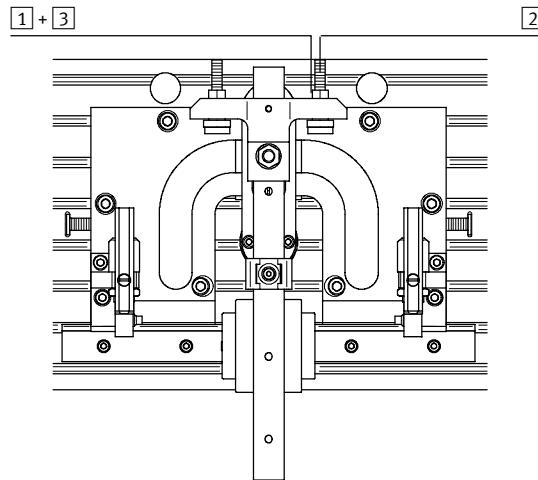

Y-axis (horizontal)

Procedure:

- Loosen the screws
- Adjust the slotted guide plate using the adjustment screw (the slotted guide plate must always make contact with the guide rail)
- Tighten the screws

Z-axis (vertical)

Procedure:

- Loosen the lock nuts
- Set the desired Z-stroke using the set screw
- Tighten the lock nuts

Handling module HSP

Technical data

Wait position module

Application and mode of operation

Figure 1:

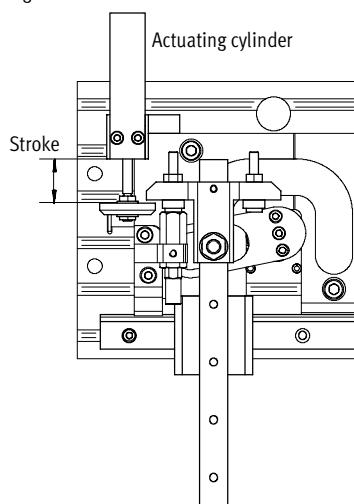

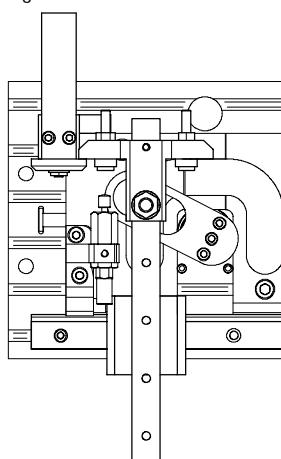

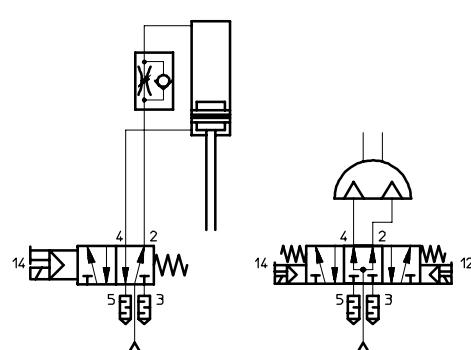

Figure 2:

Circuit diagram for HSP with wait position module

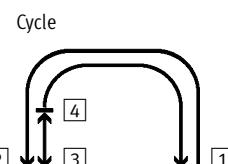

Note

When used in combination with the wait position module the handling module HSP must be actuated using a 5/3-way valve (normally pressurised). The actuating cylinder is actuated using a 5/2-way valve. The actuating cylinder may only be used for applications involving pulling.

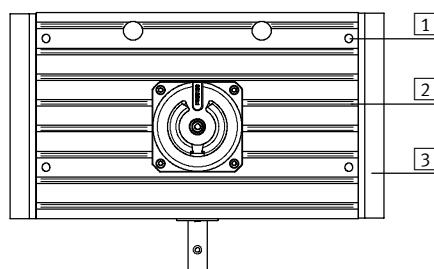

- [1] The handling module HSP is in the right-hand end position. The actuating cylinder is extended in its initial position.
- [2] The 5/3-way valve is reset once the handling module reaches the left-hand end position (Figure 1).
- [3] During retraction the actuating

- cylinder pulls the handling module upwards into its wait position. The operating range is then free (Figure 2).
- [4] From the wait position the handling module can either swivel to the initial position or to the other end position.

Size	HSP-12	HSP-16	HSP-25
Max. Z-stroke of wait position module	15	25	25

Mounting options

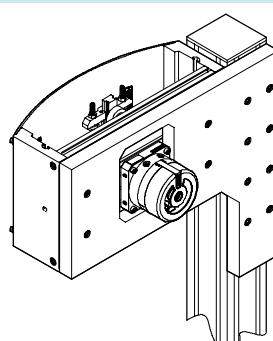

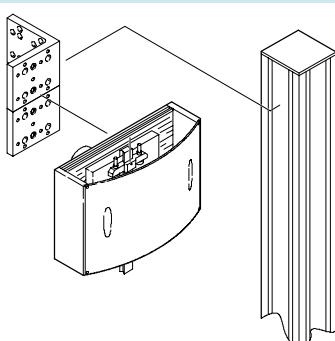

- [1] Direct mounting via through-holes
- [2] Via slot nuts
- [3] User-specific
