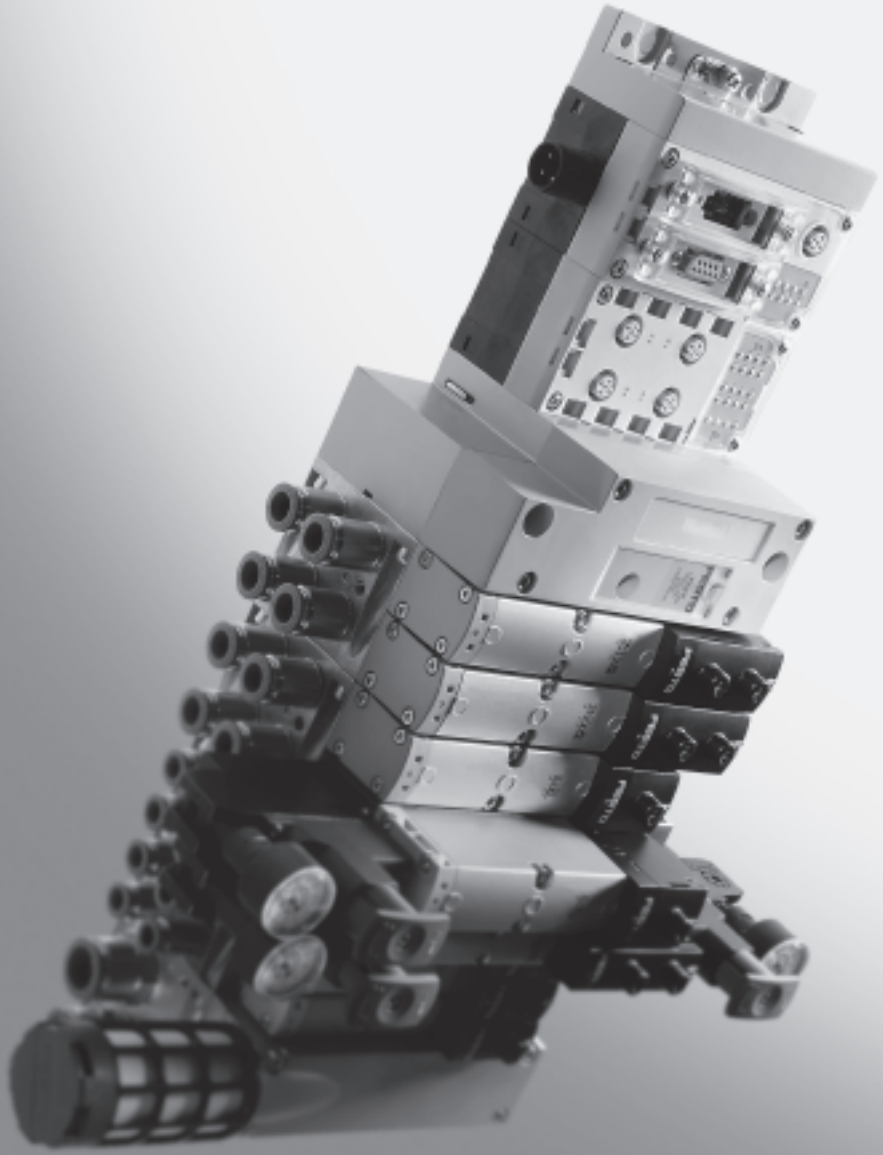
Valve terminal type 45 VTSA-F

FESTO



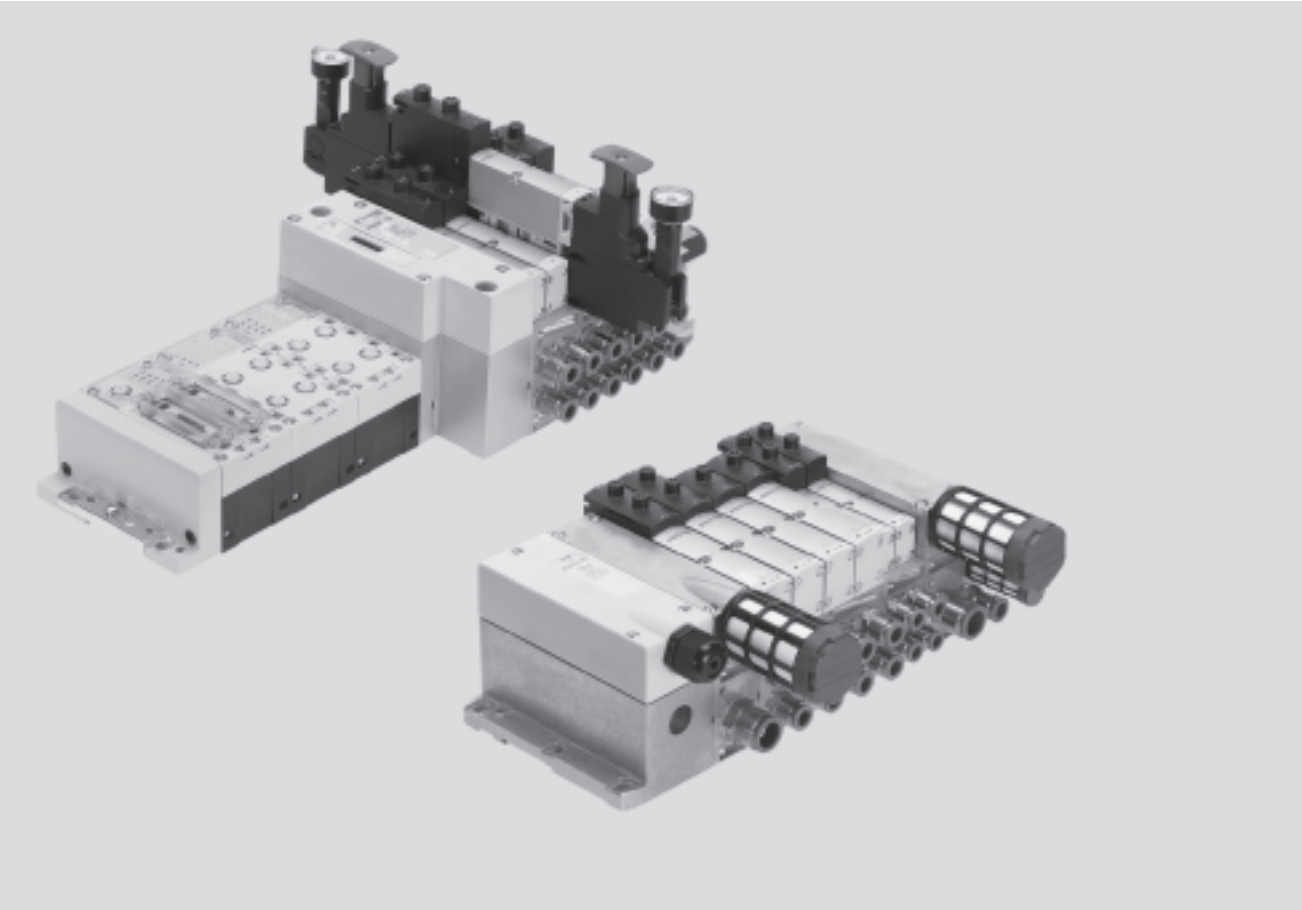
- Modular multi-functional valve terminal for up to 32 valves
- Design suitable for electrical peripherals CPX
- Channel-oriented diagnosis down to the individual valve
- Choice of operating voltage between 24 V DC and 110 V AC
- High flow rate of up to 1,400 l/min
- Two valve sizes on one valve terminal
- Sturdy metal design
- Pneumatic connections with threaded connector/QS fitting

design award winner 2005

reddot design award winner 2005

Valve terminal type 45 VTSA-F

Key features



Innovative

- High-performance valves in sturdy metal housing
- With the VTSA-F the full performance of the Festo valves with a flow rate of up to 1,400 l/min is available
- Standardised: from the multi-pin plug connection up to the fieldbus connection and control block
- Dream team: Fieldbus valve terminal suitable for CPX electrical peripherals. This means
  - Future-ready internal communication system for actuation of valves and CPX modules

Flexible

- Modular system offering a range of configuration options
- Expandable up to 32 solenoid coils
- Conversions and extensions are possible at any time
- Manifold sub-bases can be extended using four screws, sturdy duct separation on metal substrate
- Integration of innovative function modules possible
- Supply plates permit a flexible air supply and variable pressure zones
- Reverse operation
- Wide pressure range –0.9 ... 10 bar
- Wide range of valve functions
- Valve supply: 24 V DC or 110 V AC

Reliable

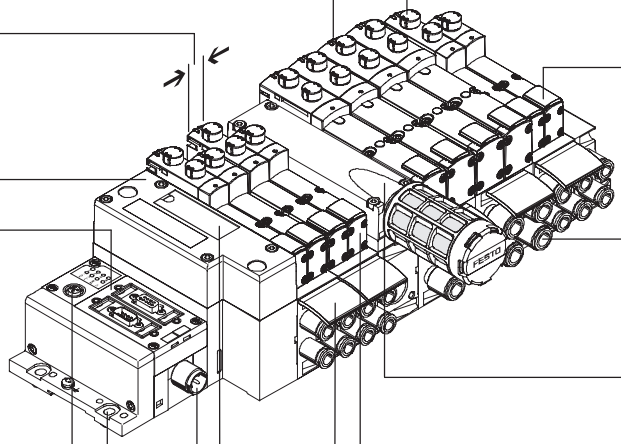
- Sturdy and durable metal components
  - Valves
  - Manifold sub-bases
  - Seals
- Fast troubleshooting thanks to LEDs on the valves and diagnostics via fieldbus
- Reliability of service thanks to valves that can be replaced easily and quickly
- Manual override: pushing, pushing/detented or with cover
- Durable, thanks to tried-and-tested spool valves
- Large and durable labelling system
- 100% duty cycle

Easy to assemble

- Ready to install, already assembled and tested
- Lower cost of selection, ordering, installation and commissioning
- Secure wall mounting or DIN H-rail mounting

Valve terminal type 45 VTSA-F

Key features



Reduced downtimes:
LED diagnosis on the spot

Width 18 mm, 26 mm can be combined on a single terminal without adapter

Pneumatic interface to CPX

Simple electrical connections
- Fieldbus connection via CPX
- Multi-pin plug connection with pre-assembled cable or terminal strip (Cage Clamp)
- Control block via CPX
- Individual connection

CPX diagnostic interface for hand-held devices (channel-oriented diagnosis down to the individual valve)

Quick mounting:
Direct mounting using screws or DIN H-rail

Secure:
Valves, outputs and logic voltage can be switched off separately

Reliable operation:
Manual override: pushing/detented or with cover

Flexible:
- 32 valve positions/32 solenoid coils
- One valve series for a wide range of flow rates

Functional:
Large ports, flow-optimised ducts, robust metal thread or pre-assembled QS connections

Modular:
Supply plates facilitate the creation of multiple pressure zones as well as numerous additional exhaust and supply ports

Comprehensive range of valve functions

Practical:
Large inscription labels

Equipment options

Valve functions

- 5/2-way valve
  - Single solenoid valve, pneumatic/spring return
  - Double solenoid valve
  - Double solenoid valve with dominant signal
- 2x 3/2-way valve, single solenoid
  - Normally open
  - Normally open, reversible
  - Normally closed
  - Normally closed, reversible
- 2x 3/2-way valve, single solenoid
  - 1x normally open, 1x normally closed
  - 1x normally open, 1x normally closed, reversible
- 5/3-way valve
  - Mid-position pressurised
  - Mid-position closed
  - Mid-position exhausted

Special features

Combinable
- Width 18 mm: valve flow rate up to 700 l/min
- Width 26 mm: valve flow rate up to 1,400 l/min
- Width 26 mm and 18 mm can be combined on a single valve terminal

Terminal with individual connection
- Max. 32 valve positions/ max. 32 solenoid coils
- Any compressed air supply
- Any number of pressure zones

Multi-pin plug terminal
- Max. 32 valve positions/ max. 32 solenoid coils
- Parallel modular valve linking
- Any compressed air supply
- Any number of pressure zones

Fieldbus terminal/control block
- Max. 32 valve positions/ max. 32 solenoid coils
- Any compressed air supply
- Any number of pressure zones

Valve terminal type 45 VTSA-F

Key features

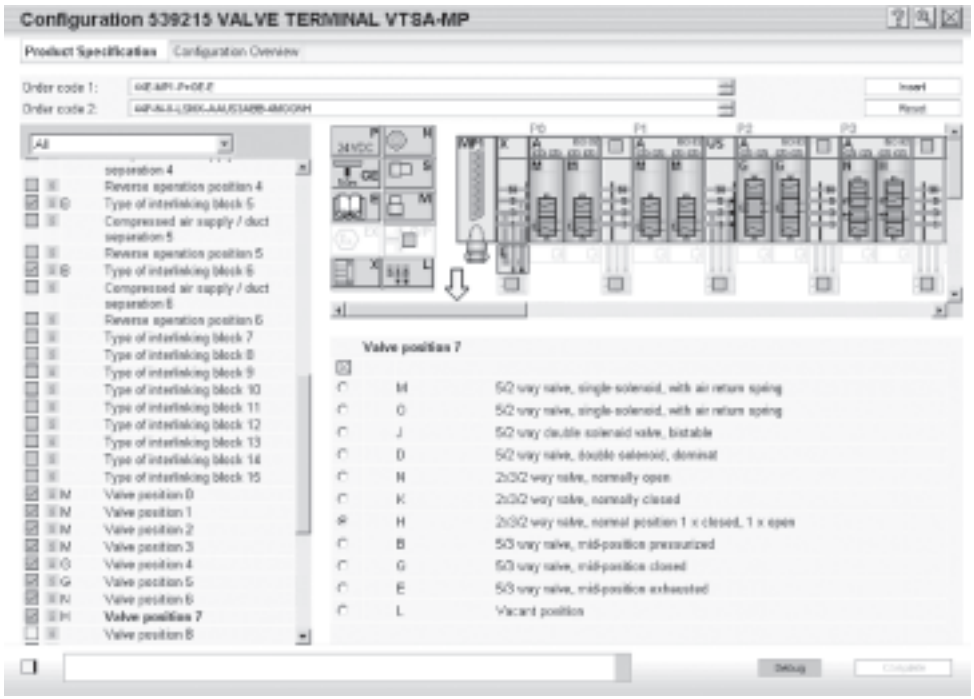
Valve terminal configurator **Online via:** ➔ www.festo.com/en/engineering

A valve terminal configurator is available to help you select a suitable VTSA-F valve terminal. This makes it much easier for you to find the right product.

The valve terminals are fully assembled according to your order specifications and are individually tested. This reduces the amount of assembly and installation to a minimum.
You order a valve terminal type using the order code.

Ordering system for type 45
➔ 4 / 2.4-54

Ordering system, CPX
➔ 4 / 4.8-136



The illustration above provides an example of a valve terminal configuration.
The following steps explain how you arrive at the order code:

Once you have called up the Festo home page, select the online version of the digital product catalogue from the “Products” submenu: This will bring you directly to the home page for the Pneumatic Catalogue. Activate the “Direct Search” menu.

Here you can specify a “Part No.” (e.g. 547 963 or 547 965), the “Type” (e.g. VTSA) or “Article name” (e.g. valve terminal) to find your “Search result”. Click on the blue shopping basket to complete the selected product according to your specifications (this does not create an order).

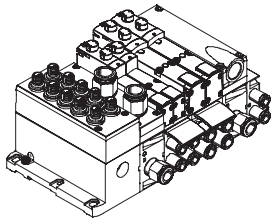
You will then be prompted to configure the product.
Select “Configurator”.
You can then configure the valve terminal step by step (from the top down) according to your requirements.
Select the “Finish” menu to continue on with the ordering process.

Valve terminal type 45 VTSA-F

Key features

FESTO

Terminal with individual connection

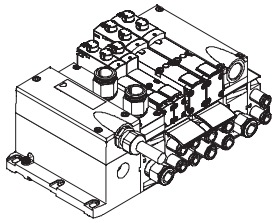


An individual connecting cable carries the control signal between the controller and the valve terminal.

The valve terminals can be fitted with max. 20 valves and max. 20 solenoid coils.

The electrical connection is established via a 5-pin M12 plug 24 V DC

Terminal with multi-pin plug connection

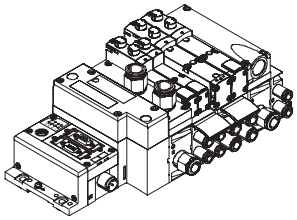


Control signals from the controller to the valve terminal are transmitted via a pre-assembled multi-core cable or a self-assembled multi-pin plug connection (Cage Clamp), which substantially reduces installation time.

The valve terminals can be fitted with max. 32 valves and max. 32 solenoid coils.

Variants
- Multi-pin plug connection with terminal strip (Cage Clamp) 24 V DC or 110 V AC
- Pre-assembled connecting cable 24 V DC
- Sub-D plug connector for fitting by users, 37-pin
- Round plug connector M23, 19-pin, 24 V DC

Terminal with fieldbus connection via the CPX system

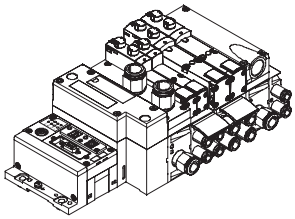


An integrated fieldbus node manages the communication connection to a higher-order PLC. This enables a space-saving pneumatic and electronic solution.

Valve terminals with fieldbus interfaces can be configured with up to 16 manifold sub-bases. With 2 solenoid coils per connection, up to 32 solenoid coils can thus be actuated.

Variants
- Profibus DP
- Interbus
- DeviceNet
- CANopen
- CC-Link
- CPX terminal
  ➔ 4 / 4.8-2

Terminal with control block connection via the CPX system

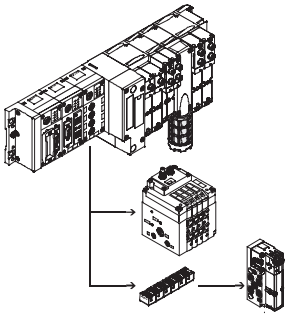


Controllers integrated in the Festo valve terminals enable the construction of stand-alone control units to IP65, without control cabinets.

Using the slave operation mode, these valve terminals can be used for intelligent pre-processing and are therefore ideal modules for designs using decentralised intelligence.

In the master operation mode, terminal groups can be designed with many options and functions, which can autonomously control a medium sized machine or system.
- CPX terminal
  ➔ 4 / 4.8-2

CP string extension



The optional string extension allows additional valve terminals and I/O modules to be connected to the fieldbus node of the CPX terminal. Different input and output modules as well as CPV-SC, CPV and CPA valve terminals can be connected.
The maximum length of the CP string extension is 10 metres, which means that the extension modules can be mounted directly on site. All of the required electrical signals are transmitted via the CP cable, which in turn means that no further installation is needed on the extension module.

The CP string interface offers:
- 32 input signals
- 32 output signals for 24 V DC output modules or solenoid coils
- Logic and sensor supply for the input modules
- Load voltage supply for the valve terminals
- Logic supply for the output modules

Valve terminal type 45 VTSA-F

Peripherals overview

FESTO

Modular pneumatic components

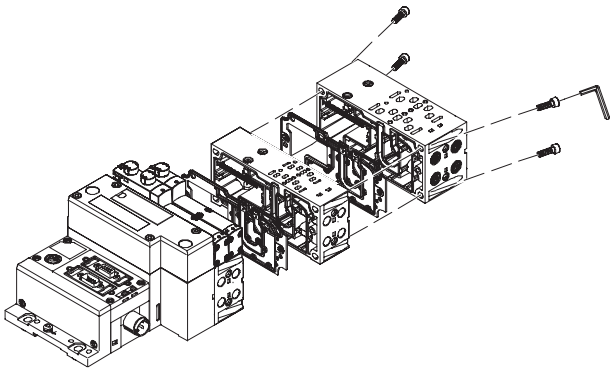
The modular design of the VTSA-F ensures maximum flexibility right from the planning stage and offers maximum ease of service in operation.

The system consists of manifold sub-bases and valves.
The manifold sub-bases are screwed together and thus form the support system for the valves.

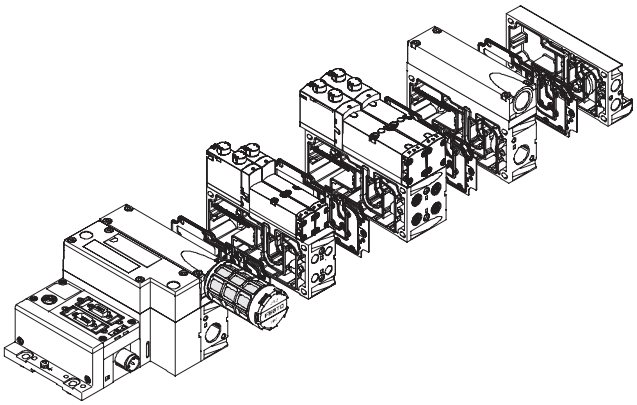
Inside the manifold blocks are the connection channels for supplying compressed air to and venting from the valves on the terminal as well as the working lines for the pneumatic cylinders for each valve.

Each manifold sub-base is connected to the next using four screws. Individual terminal sections can be isolated and further blocks inserted by loosening these screws. This ensures that the valve terminal can be rapidly and reliably extended.

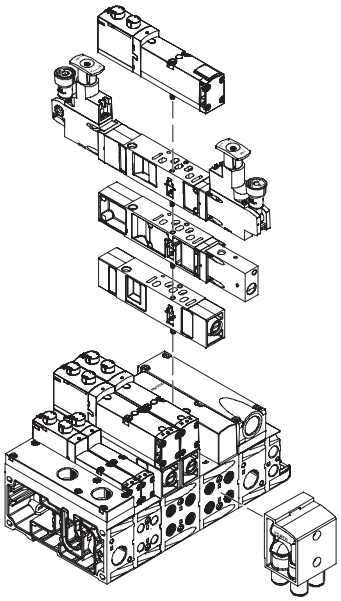
Basic system modularity



Valve modularity



Stacking modularity



Valve terminal type 45 VTSA-F

Peripherals overview

FESTO

Modular electrical peripherals

The manner in which the valves are actuated differs according to whether you are using a multi-pin terminal or fieldbus terminal.

The VTSA-F with CPX interface is based on the internal bus system of the CPX and uses this communication system for all solenoid coils and a range of electrical input and output functions.

Parallel linking facilitates the following:

- Transmission of switching information
- High valve density
- Compact design
- Position-based diagnostics

- Separate voltage supply for valves
- Flexible alteration without address shifting
- Transmission of status, parameter and diagnostic data

Valve terminal with individual connection

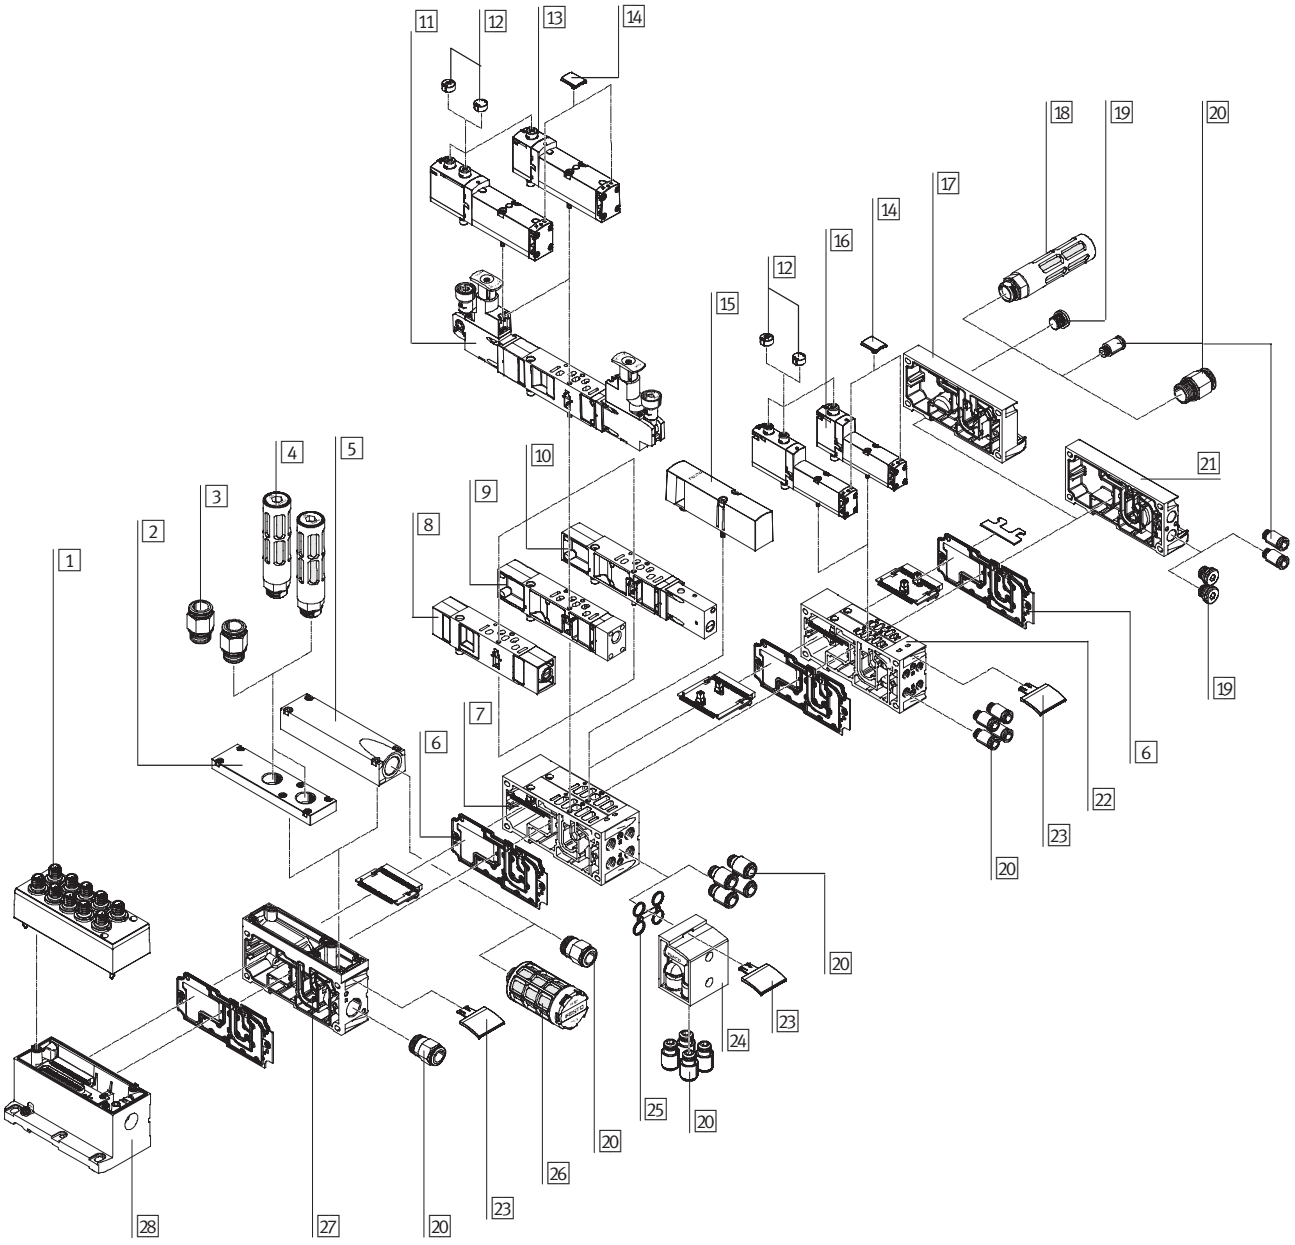
Order code:
- 45E for the electrical components
- 45P for the pneumatic components

VTSA-F valve terminals with individual connection can be expanded with up to 20 valves with max. 20 solenoid coils.
The manifold sub-bases width 18 and 26 mm are either prepared for:
- 2 single solenoid valves
- 2 double solenoid valves

depending on the size.

- Double solenoid valve positions can be fitted with any valve or a blanking plate.
- Single solenoid valve positions can only be fitted with single solenoid valves or a blanking plate.

The electrical connection is established via a 5-pin M12 plug.



Valve terminal type 45 VTSA-F

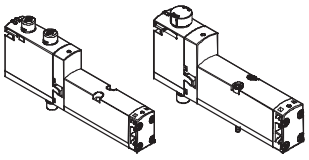
Key features – Pneumatic components

FESTO

Sub-base valve



VTSA-F offers a comprehensive range of valve functions. All valves are fitted with piston spool and patented sealing system which ensure good tightness, a wide operating pressure range and long service life.

Sub-base valves can be quickly replaced since the tubing connections remain on the sub-base.
Irrespective of the valve function there are sub-base valves with one solenoid coil (monostable) or with two solenoid coils for bistable or double valve functions.

Reverse/vacuum operation
Select reverse operation (code Z) if you wish to operate an actuator (cylinder) with different pressures for the forward and return stroke. Please note that these valves must be operated via a separate pressure zone.
The 3/2-way valves, reversible, are also suitable for vacuum operation.

Blanking plate

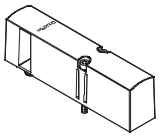


Plate without valve function for reserving valve positions on a valve terminal.

Valves and blanking plates are attached to the manifold sub-base using two screws.

Valve function

Code	Circuit symbol	Width 18 mm	Width 26 mm	Description
M		■	■	5/2-way valve, single solenoid • Pneumatic spring return
O		■	■	5/2-way valve, single solenoid • Spring return
J		■	■	5/2-way valve, double solenoid
D		■	■	5/2-way valve, double solenoid • Dominant signal with port 14 on the control side
N		■	■	2x 3/2-way valve, single solenoid • Normally open • Pneumatic spring return
K		■	■	2x 3/2-way valve, single solenoid • Normally closed • Pneumatic spring return

Valve terminal type 45 VTSA-F

Key features – Pneumatic components

FESTO

Valve function				
Code	Circuit symbol	Width		Description
		18 mm	26 mm	
H		■	■	2x 3/2-way valve, single solenoid • Normal position – 1x closed – 1x open • Pneumatic spring return • Operating pressure > 3 bar
B		■	■	5/3-way valve • Mid-position pressurised[1)] • Spring return
G		■	■	5/3-way valve • Mid-position closed[1)] • Spring return
E		■	■	5/3-way valve • Mid-position exhausted[1)] • Spring return
P		■	■	2x 3/2-way valve, single solenoid • Reverse operation • Normally open • Pneumatic spring return
Q		■	■	2x 3/2-way valve, single solenoid • Reverse operation • Normally closed • Pneumatic spring return
R		■	■	2x 3/2-way valve, single solenoid • Reverse operation • Normal position – 1x closed – 1x open • Pneumatic spring return
L		■	■	For valve terminal only: Blanking plate for vacant valve position

1) If neither solenoid coil is energised, the valve moves to its mid-position by means of spring force.
If both coils are energised at the same time, the valve remains in the previously assumed switching position

Design

Valve replacement

The valves are attached to the metal manifold sub-base using two screws, which means that they can be easily replaced. The mechanical robustness of the manifold sub-base guarantees good long-term seal tightness.

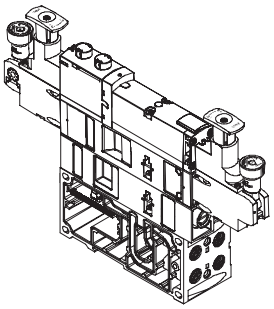
Expansion

Vacant positions can be fitted with valves at a later date. The dimensions, mounting points and existing pneumatic installations remain unchanged during this process.
The order code VSVA-... is located on the front of the valve beneath the manual override.

Valve terminal type 45 VTSA-F

Key features – Pneumatic components

Vertical stacking

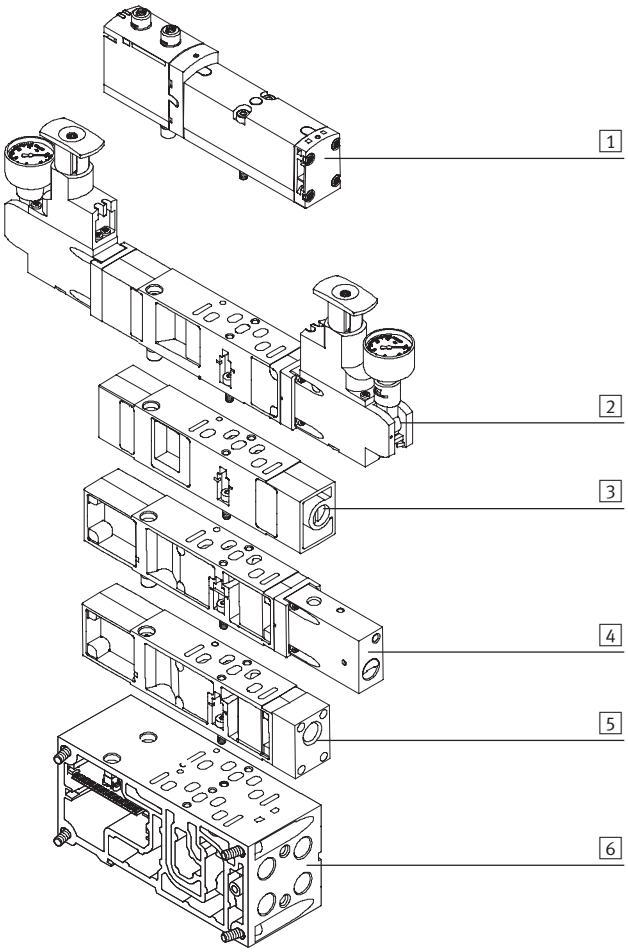


Additional functions can be added to each valve position between the sub-base and the valve. These functions are known as vertical stacking, and enable special functioning or control of an individual valve position. Combinations of several valve sizes on one valve terminal are possible.

Note

Certain combinations are not recommended due to the design of the individual vertical stacking components.

Vertical stacking components



The following component sequence is recommended for valve positions with vertical stacking:

1. valve
2. Pressure regulator plate
3. Flow control plate
4. Vertical shut-off plate
5. Vertical supply plate
6. Manifold sub-base

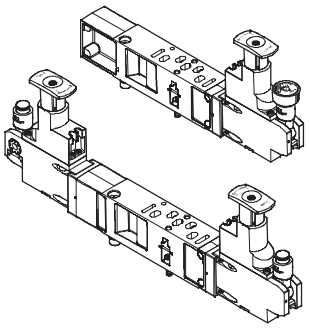
Valve terminal type 45 VTSA-F

Key features – Pneumatic components

FESTO

Vertical stacking

Pressure regulator plate

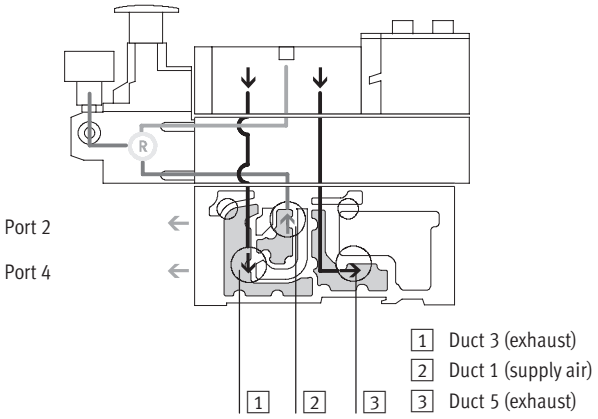


An adjustable pressure regulator can be installed between the sub-base and the valve in order to control the force of the respective actuator.

This pressure regulating valve maintains an essentially constant output pressure (secondary side) independent of pressure fluctuations (primary side) and air consumption.

Standard version:
- For supply pressure up to 6 bar or up to 10 bar
- Without pressure gauge (optional)
- Regulator knob with 3 positions (locked, reference position, free running)

Mode of operation of pressure regulator plate (P regulator) for port 1; code: ZA, ZF



This pressure regulator regulates the pressure before the valve in duct 1. Ducts 2 and 4 thus have the same regulated pressure.

During venting, the exhaust flow in the valve is from duct 2 to duct 3 and from duct 4 to duct 5.

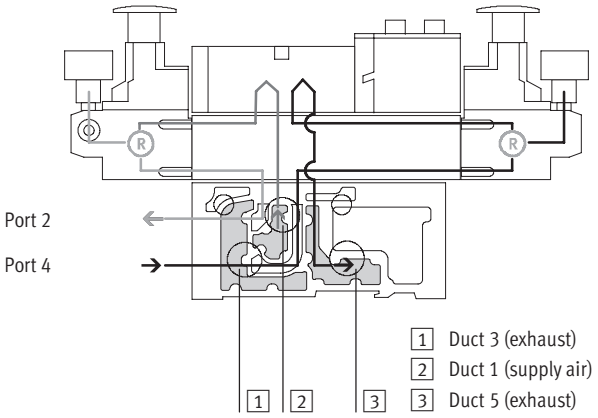
Advantages

- The pressure regulator is not affected by venting, since the pressure is regulated before the valve.
- The pressure regulator can always be adjusted, since the pressure from the valve terminal is always present.

Application examples

- An equal working pressure is required at working ports 2 and 4.
- A lower working pressure (e.g. 3 bar) than the operating pressure present on the valve terminal (e.g. 8 bar) is required.

Mode of operation of the pressure regulator plate (AB regulator) for ports 2 and 4; code: ZD, ZI



This pressure regulator regulates the pressure in ducts 2 and 4 after the pressure medium flows through the valve. During venting, the exhaust flow in the valve is from duct 2 to duct 3 and from duct 4 to duct 5 via the pressure regulator.

Example with the following switching position:
The supply air flows from duct 1 of the manifold sub-base via the valve to duct 2, it is then regulated and made available at port 2 of the manifold sub-base. At the same time, venting takes place via duct 4 of the manifold sub-base, via the regulator and via the valve into duct 5 of the manifold sub-base.

Restrictions

- The pressure regulator cannot be adjusted in the exhaust position. For example, the pressure regulator for duct 4 cannot be adjusted when the valve is pressurised in the switching position from duct 1 to duct 2 and exhausted from duct 4 to duct 5.

Application examples

- When two different working pressures are required instead of the valve terminal operating pressure at ports 2 and 4.

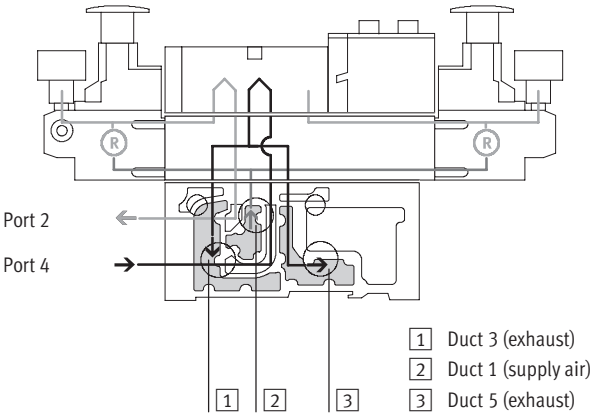
Valve terminal type 45 VTSA-F

Key features – Pneumatic components

FESTO

Vertical stacking

Mode of operation of the pressure regulator plate (AB regulator, reversible) for ports 2 and 4, reversible; code: ZE, ZJ



With this pressure regulator, the supply air (duct 1) is split and routed directly to both pressure regulators. The regulated compressed air is present in ducts 3 and 5 on the valve. The valve is thus operated in reversible mode.
This means
- Duct 3 routes the working pressure to port 2
- Duct 5 routes the working pressure to port 4

Example with the following switching position:
The supply air in duct 1 is split among ducts 3 and 5 in the regulator and flows from here to the valve. In the valve, the supply air is routed to port 2 of the manifold sub-base. The exhaust air is simultaneously routed via duct 4 of the manifold sub-base and via the valve to regulator duct 1, where it is split between ducts 3 and 5 and then drawn off via the manifold sub-base.

Application examples

- When two different pressures are required in ducts 2 and 4 instead of the operating pressure.
- When fast exhaust performance is required.
- When the pressure regulator must always be adjustable.

Note

- Reversible pressure regulator plates may only be combined with valves that can be operated in reversible mode.
- Valves in valve positions with vertical shut-off plates are operated with internal pilot air supply, even when the valve terminal is operated with external pilot air supply.
- The following combination of reversible valve terminals with vertical stacking components is not permitted:
  - Reversible pressure regulator plates
  - Flow control plates
  - Vertical shut-off plates
  - Vertical supply plates

Advantages

- Fast cycle times.
- 50% higher exhaust flow rate, as air is not exhausted via the pressure regulator. The load on the pressure regulator is also reduced.
- No quick exhaust valves are required.
- Operating pressure is always present at the pressure regulator, as the pressure is regulated before the valve, i.e. the regulator can always be adjusted.

Disadvantages

- 2x 3/2-way valves (code N, K, H) not used, as pressure is present at ports 3 and 5.
- No practical combination with a flow control plate possible.

Valve terminal type 45 VTSA-F

Valve terminal type 45 VTSA-F

Key features – Pneumatic components

FESTO

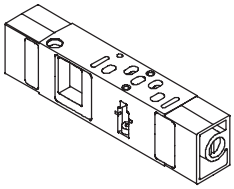
Vertical stacking – Flow control plate



This plate is used for exhaust air flow control in ducts 3 and 5 of a valve in order to adjust the speed of the actuator.

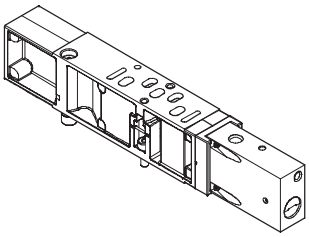
Ducts 3 and 5 can be adjusted independently of each other.

Note

On reversible valve terminals, supply air flow control takes place in ducts 3 and 5 before the valve.

Code		Type	Width		Description
			18 mm	26 mm	
X		VABF-S4-...F1B1-C	■	■	• Controls the flow of exhaust air after the valve to ducts 3 and 5

Vertical stacking – Vertical shut-off plate



With this plate a valve can be shut off from the supply pressure of the terminal. This means that the valve can be removed without shutting off the pressure.

Following activation of the shut-off, the exhaust air/return air from the cylinder is drawn off via the M5 threaded connection.

Note

It must be ensured that the operating pressure of the valve terminal lies within the range of the required pilot pressure (i.e. min. 3 bar).

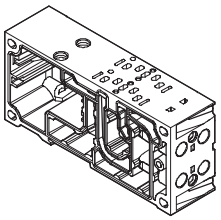
Manifold sub-base



VTSA-F is based on a modular system which consists of manifold sub-bases and valves. Manifold sub-bases are available for valve width 18 mm and width 26 mm in a double grid, i.e. two valves per manifold sub-base. The manifold sub-base contains a ducting seal and electrical linking and can be freely mixed within a valve terminal.

The manifold sub-bases are screwed together and thus form the support system for the valves.
Inside the manifold blocks are the connection channels for supplying compressed air to and venting from the valves on the terminal as well as the working lines for the pneumatic cylinders for each valve.

Each manifold sub-base is connected to the next using four screws. Individual terminal sections can be isolated and further manifold sub-bases inserted by loosening these screws. This ensures that the valve terminal can be rapidly and reliably extended.

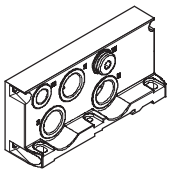
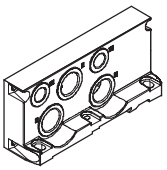
Compressed air supply and venting

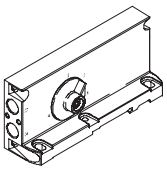
Right-hand end plate
– Code V



Right-hand end plate
– Code X



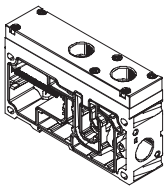
End plate with pilot air selector
– Code Y, U, Z, W



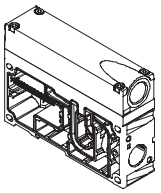
The valve terminal VTSA-F can be supplied with compressed air at one or more points. This is a reliable way of ensuring that all functional components will always offer good performance, even with large-scale expansions. The valve terminal is supplied via supply plates (max. 16 per terminal) or via an end plate. Venting is performed either using silencers or ports for ducted exhaust air on the supply plates and/or on the right-hand end plate. There are two types of supply plates:

- Exhaust port 3/5 common
- Exhaust air 3/5 separated

Port configuration for supply plates
Exhaust air 3/5 separated
– Code K



Port configuration for supply plates
Exhaust port 3/5 common
– Code L



Pilot air supply

The port for the pneumatic supply is located on the supply plates or the right-hand end plate.
The ports differ for the following types of pilot air supply:

- Internal
- External

Internal pilot air supply
Internal pilot air supply can be selected if the working pressure is between 3 and 10 bar.
The pilot air supply is then branched from the compressed air supply 1 using an internal connection. Port 14 on the right-hand end plate is sealed with a blanking plug.

External pilot air supply
If the supply pressure is less than 3 bar, you must operate your VTSA-F valve terminal using external pilot air supply. The pilot air supply is supplied via port 14 on the right-hand end plate to this end. This is the case even if the valve terminal is operated with different pressure zones.

Note

If a gradual pressure build-up in the system using a pressurised on-off valve is required, external pilot air supply where the control pressure applied during switch-on is already very high should be selected.

Right-hand end plate

Different right-hand end plates are available.

With the following two end plates, the outgoing direction of the ports is aligned with the horizontal stacking direction.
Right-hand end plates with supply air/exhaust air
– Internal pilot air supply: Code V
– External pilot air supply: Code X

For end plates with pilot air selector, the outgoing direction of the ports is to the front face of the valve terminal. This means that all of the ports on the terminal can be combined in one outgoing direction.
The special feature of the end plates with pilot air selector is the selector switch itself, which has four settings for different pilot air supply/pilot exhaust air.

End plates with pilot air selector switch set at the factory for:
– Internal pilot air supply: Code Y
– External pilot air supply: Code Z
– Internal pilot air supply, ducted pilot exhaust air: Code U
– External pilot air supply, ducted pilot exhaust air: Code W

Note

The end plate with pilot air selector must be used in combination with a supply plate.
The reversible 3/2-way valves (code P, Q, R) must only be operated in selector position 1 or 2.

Compressed air supply/duct separation

Additional supply plates can be used for larger terminals or to create pressure zones.
These can be selected at any point before or after manifold sub-bases.

Supply plates contain the ports:
- Compressed air supply (1)
- Exhaust port (3/5) common or separated

Depending on your order, the exhaust air ducts are either ducted or vented via silencers.

VTSA-F with ducted exhaust air
With ducted exhaust air, venting can be performed via a supply plate or a right-hand end plate (code V or X).

If duct separation is required, there are three different options:
- Duct separation 1, 3, 5: Code S
- Duct separation 1: Code T
- Duct separation 3, 5: Code R

If a combination of duct separation (S, T or R) and one or two supply plates is required, the following variants can be selected:
- Supply plate with duct separation on the left-hand side: Code SU, TU, RU
- Supply plate with duct separation on the right-hand side: Code US, UT, UR
- 2 supply plates with intermediate duct separation: Code USU, UTU, URU

Valve terminal type 45 VTSA-F

Key features – Pneumatic components

FESTO

Creation of pressure zones and separation of exhaust air

The valve terminal VTSA-F offers a number of options for creating pressure zones if different working pressures are required.
Pressure zones are created by isolating the internal supply channels between the manifold sub-bases using appropriate duct separation.

Compressed air is supplied and vented by using a supply plate.
The position of the supply plates and duct separations can be freely selected for VTSA-F.

Duct separations are integrated ex-works as per your order.
Duct order and separations can be distinguished by their coding, even when the valve terminal is assembled.

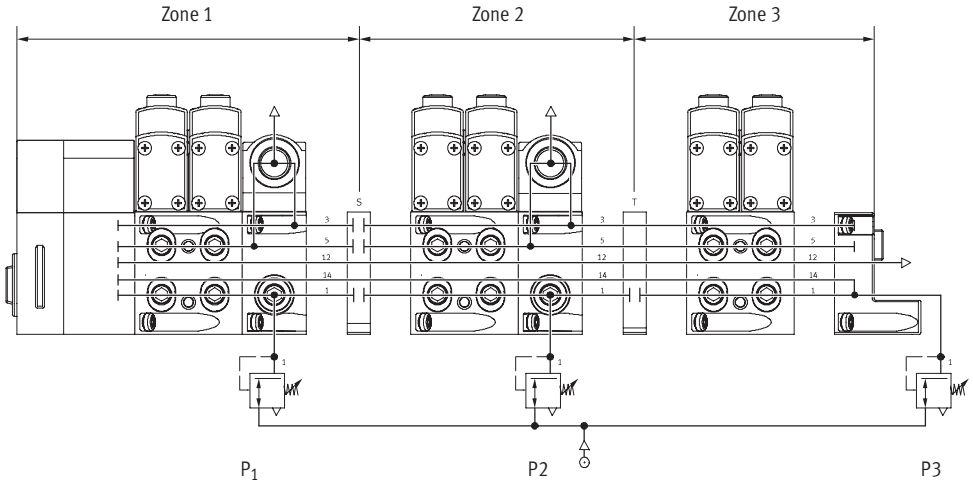
Examples: Creation of pressure zones

VTSA-F with CPX terminal connection

VTSA-F allows the creation of up to 16 pressure zones. The diagram shows an example for the configuration and connection of three pressure zones using duct separations – with internal pilot air supply.



Valve terminal type 45 VTSA-F

Key features – Assembly

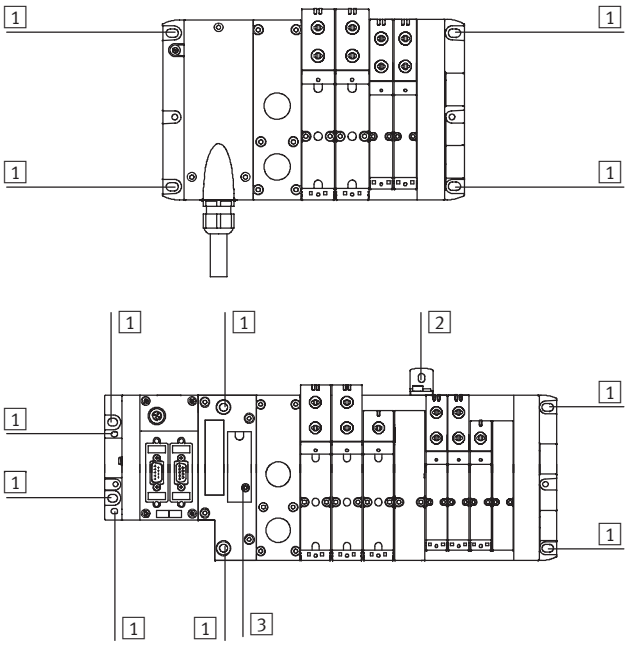
FESTO

Valve terminal assembly

Sturdy terminal assembly thanks to:

- Four through-holes for wall mounting
- Additional mounting bracket
- DIN H-rail mounting

Wall mounting



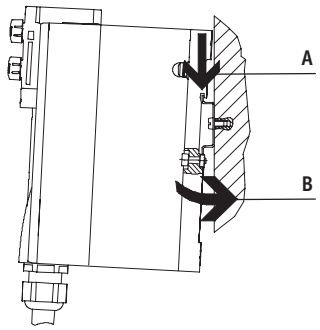
The VTSA-F valve terminal is screwed onto the mounting surface using M6 screws. The mounting holes are located at the following points:

- Multi-pin plug (4 pieces):
  2 each at the multi-pin connection block and the right-hand end plate.
- Fieldbus (4 pieces):
  2 each at the left-hand (CPX) and right-hand (VTSA-F) end plate. The pneumatic interface additionally provides further mounting holes as well as optional mounting brackets.

The fieldbus version additionally provides a bracket for wall mounting (type VTSA-F, Part No. 665 983). The mounting brackets can be used with very long valve terminals (6 manifold sub-bases or more) to improve load capacity during vibration or shocks.

1 Hole for M6 screw
2 Hole for M5 screw
3 Hole for DIN H-rail mounting

DIN H-rail mounting



The VTSA-F valve terminal is hooked onto the DIN H-rail (see arrow A).
The VTSA-F valve terminal is swivelled about the DIN H-rail, then swung into place and secured with the clamping shim (see arrow B).

For DIN H-rail mounting of the valve terminal you will need the following VTSA-F mounting kit:

- With multi-pin plug:
  CPA-BG-NRH
- With fieldbus:
  CPX-CPA-BG-NRH

This permits mounting of the valve terminal on a DIN H-rail to EN 60715.

Valve terminal type 45 VTSA-F

Key features – Display and operation

FESTO

Display and operation

Each solenoid coil is allocated an LED which indicates its switching status.

- Indicator 12 shows the switching status of the pilot control for output 2.
- Indicator 14 shows the switching status of the pilot control for output 4.

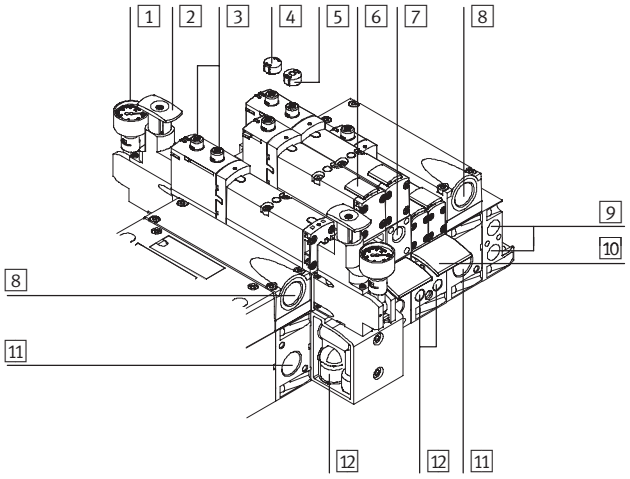
Manual override

The manual override allows the valve to be switched when in the electrically non-activated or de-energised status. The valve is actuated by pushing the manual override. The set switching status can also be fixed by turning the manual override.

Alternatives:

- A cover cap (accessory code N) can be fitted over the manual override to prevent it from being turned. The valve can only be actuated by pressing it.
- A cover cap (accessory code V) can be fitted over the manual override to prevent it from being accidentally actuated.

Pneumatic connection and control elements

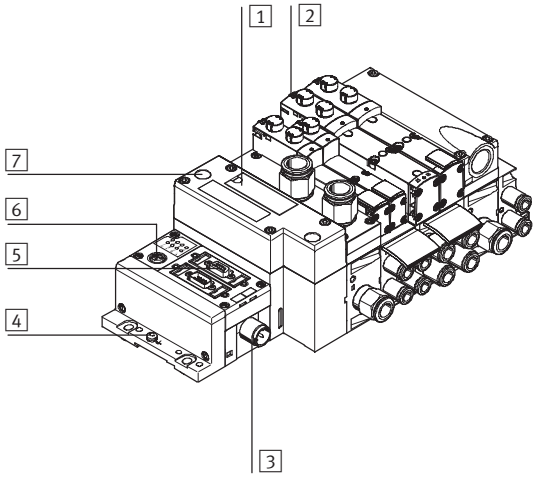


1 Pressure gauge (optional)
2 Adjusting knob of optional pressure regulator plate
3 Manual override (for each pilot solenoid coil, pushing or pushing/detenting)
4 Optional cover cap for manual override (inhibits manual override)
5 Optional cover for manual override with non-detenting pushing function
6 Inscription label holder for valve
7 Adjusting screw of optional flow control plate
8 Exhaust ports (valves) (3/5)
9 Pilot ports 12 and 14 for supplying the external pilot air supply
10 Inscription label holder for manifold block
11 Supply port 1 (operating pressure)
12 Working ports 2 and 4, for each valve position

Note

A manually actuated valve (manual override) cannot be reset electrically. Conversely, an electrically actuated valve cannot be reset using the mechanical manual override.

Electrical connection and display components



1 Inscription area and cover for DIN H-rail mounting
2 Yellow LEDs: Signal status display for pilot solenoid coils
3 Voltage supply connection
4 Earth terminal
5 Fieldbus connection (bus-specific)
6 Service interface for handheld unit, etc.
7 Red LED: Common fault display for valves

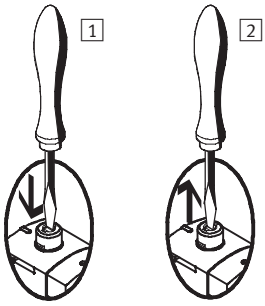
Valve terminal type 45 VTSA-F

Key features – Display and operation

FESTO

Manual override (MO)

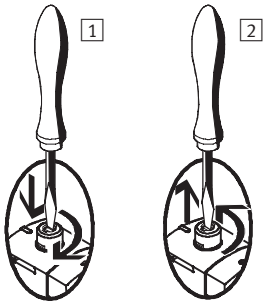
Manual override with automatic return (pushing)



1 Press in the stem of the manual override using a pin or screwdriver.
Valve is then actuated.

2 Remove the screwdriver.
Spring force pushes the stem of the manual override back.
Valve returns to the initial position (not with double solenoid valve code J).

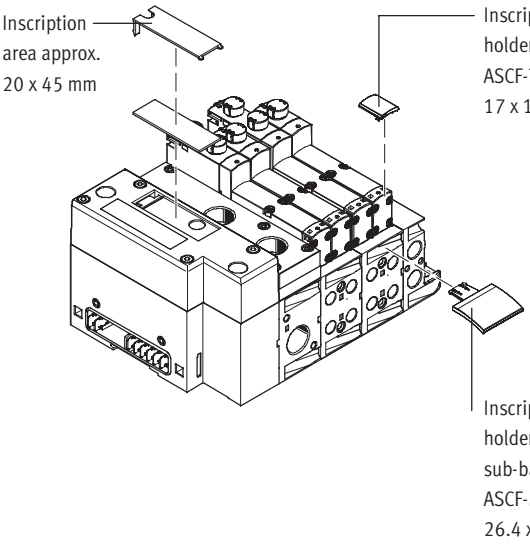
Manual override set via turning (covered)



1 Press in the stem of the manual override using a pin or screwdriver until the valve switches and then turn the stem clockwise by 90° until the stop is reached.
Valve remains actuated.

2 Turn the stem anti-clockwise by 90° until the stop is reached and then remove the screwdriver.
Spring force pushes the stem of the manual override back. Valve returns to the initial position (not with double solenoid valve code J and D).

Inscription system



Inscription label holders can be applied to the valves and manifold sub-bases to identify them. These inscription label holders can be ordered by entering the code B or T in the order code for accessories.
Scope of delivery: Inscription label holder including inscription label.
The following inscription labels can be used as spares:

- Inscription label holder for valve type ASCF-T-S6: Part No. 540 888
- Inscription label holder for manifold sub-base type ASCF-M-S6: Part No. 540 889

Large inscription labels can be attached to the pneumatic interface as an alternative or in addition to the smaller labels.

Valve terminal type 45 VTSA-F

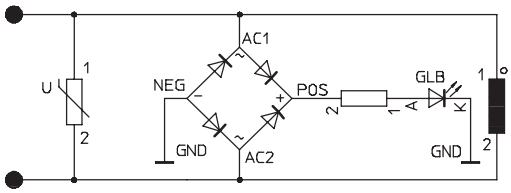
Key features – Electrical components

FESTO

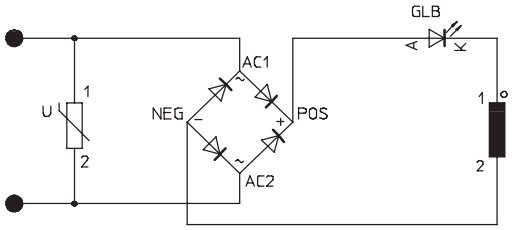
Protective circuit

Each VTSA-F solenoid coil is protected with a spark arresting protective circuit as well as against reverse-polarity protection.

24 V DC version



110 V AC version



Individual electrical connection

A maximum of 20 solenoid coils can be activated. 2 solenoid coils per valve can be addressed.

Individual electrical connection:
- M12
- 6-way or 10-way
- 5-pin
- 24 V DC

Electrical multi-pin plug connection

The following multi-pin plug connection variants are offered for the valve terminal VTSA-F:
- Sub-D multi-pin plug connection (37-pin for 24 V DC): This valve terminal is available with 2 ... 16 valve positions fitted with double solenoid valves and 2 ... 32 valve positions fitted with single solenoid valves. A maximum of 32 solenoid coils can be activated.
- Terminal box (terminal strip for 24 V DC or 110 V AC): This valve terminal is available with 2 ... 16 valve positions fitted with double solenoid valves and 2 ... 32 valve positions fitted with single solenoid valves. A maximum of 32 solenoid coils can be activated.
- Multi-pin node (round plug connector): Electrical multi-pin plug connection with round plug connector, 19-pin to CNOMO E03.62.530.N, connecting thread M23 for 24 V DC. The valve terminals can be fitted with max. 16 solenoid coils.

The valves are switched by means of positive or negative logic (PNP or NPN). Mixed operation is not permitted.

Each pin on the Sub-D multi-pin plug or terminal box (terminal strip) can activate exactly a single solenoid coil. If the maximum configurable number of valve positions is 32, this means that 32 valves, each with a single solenoid coil, can be addressed. With 16 or less valve positions, 2 valve solenoid coils per valve can be addressed.

Note

Use the following 37-pin connecting cables from Festo to connect the valve terminal VTSA-F with Sub-D multi-pin plug connection:
- NEBV-S1W37-...-LE10 for max. 8 solenoid coils
- NEBV-S1W37-...-LE26 for max. 22 solenoid coils
- NEBV-S1W37-...-LE37 for max. 32 solenoid coils
- NECV-S1W37 pre-assembled plug connector

Fieldbus connection/control block

All functions and features of the electrical peripherals CPX are permitted in connection with the CPX interface. This means:
- The valves and electrical outputs are supplied via the CPX operating voltage connection.
- The valves are supplied and switched independently via a separate port on the CPX.

Note

Further information can be found in
➔ Info 4 / 4.8-210 Modular electrical terminal CPX

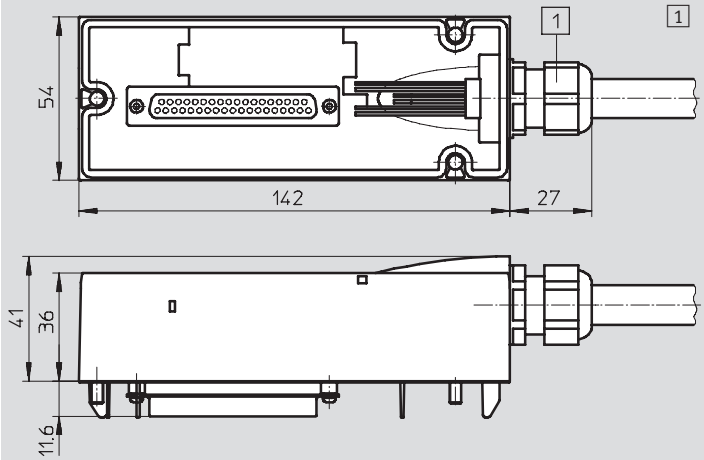
Connecting cable NEBV-S1W37-...



1 Cable conduit fitting M20x1.5

The wire colours refer to the following pre-assembled multi-core cables from Festo:

- NEBV-S1W37-...-10 for valve terminal with max. 8 solenoid coils
- NEBV-S1W37-...-26 for valve terminal with max. 22 solenoid coils
- NEBV-S1W37-...-37 for valve terminal with max. 32 solenoid coils

Valve terminal type 45 VTSA-F

Valve terminal type 45 VTSA-F

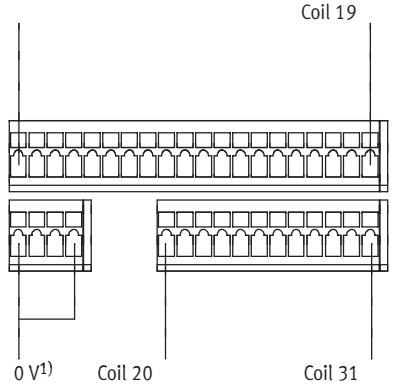
Key features – Electrical components

FESTO

Pin allocation – Multi-pin terminal strip (CageClamp), 24 V DC and 110 V AC; electrical connection code T

Each solenoid coil must be assigned to a specific terminal on the terminal strip in order for actuation of the valves to take place.

Coil 0 Coil 19



Note

The drawing shows the view onto the multi-pin terminal strip (CageClamp).

Terminal	Coil/address		Terminal	Coil/address
1	0		17	16
2	1		18	17
3	2		19	18
4	3		20	19

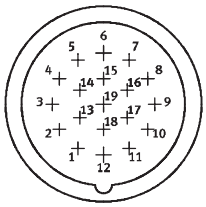
Conductor				
33	0 V		35	0 V
34	0 V		36	0 V

1) 0 V for positive switching control signals; connect 24 V for negative switching control signals; mixed operation is not permitted.

Pin allocation – Round plug connector, 24 V DC; electrical connection code MP4



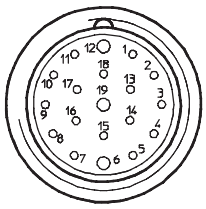
Address	Pin1)		Address	Pin1)
0	15		8	17
1	7		9	9
2	5		10	2
3	4		11	13
4	16		12	11
5	8		13	10
6	3		14	1
7	14		15	18

1) Pin 6: 0 V for positive switching control signals; connect 24 V for negative switching control signals; mixed operation is not permitted.
Pin 12: Earth
Pin 19: Unused

Rules for addressing

- Address allocation does not depend on whether single or double solenoid valve are fitted.
- Addresses are allocated in ascending order without gaps, from left to right.
- A valve position for single solenoid coil activation occupies one address (type VABV-...-...T1).
- A valve position for two solenoid coil activations occupies two addresses (type VABV-...-...T2). The following allocation applies in this case:
  - Coil 14: Lower-value address
  - Coil 12: Higher-value address

Pin allocation – Round plug connector, 24 V DC; electrical connection – CNOMO assignment



Pin	Valve position/coil		Pin	Valve position/coil
1	8/14		10	7/12
2	6/14		11	7/14
3	4/14		12	FE (earth)
4	2/12		13	6/12
5	2/14		14	4/12
6	0 V1)		15	1/14
7	1/12		16	3/14
8	3/12		17	5/14
9	5/12		18	8/12
			19	Unused

1) 0 V for positive switching control signals; connect 24 V for negative switching control signals; mixed operation is not permitted.

Instructions for use

FESTO

Equipment

Operate your equipment with unlubricated compressed air if possible. Festo valves and cylinders are designed for operation under normal use without any additional lubrication and still have a long service life. The quality of compressed air downstream from the compressor must correspond to that of unlubricated compressed air. If possible, do not operate all of your equipment with lubricated compressed air. The lubricators should, where possible, always be installed directly upstream of the actuator used.

Unsuitable additional oil and an excessive oil content in the compressed air reduce the service life of the valve terminal.
Use Festo special oil OFSW-32 or the alternatives listed in the Festo catalogue (as specified in DIN 51524-HLP32; basic oil viscosity 32 CST at 40 °C).

Bio-oils
When using bio-oils (oils which are based upon synthetic or native ester, e.g. rapeseed oil methyl ester), the maximum residual oil content of 0.1 mg/m^3 must not be exceeded (see ISO 8573-1 Class 2).

Mineral oils
When using mineral oils (e.g. HLP oils to DIN 51524, parts 1 through 3) or similar oils based on poly-alpha-olefins (PAO), the maximum residual oil content of 5 mg/m^3 must not be exceeded (see ISO 8573-1 Class 4).
A higher residual oil content irrespective of the compressor oil cannot be permitted, as the basic lubricant would be flushed out over time.

12 **N, K, H** Not permitted in zones with reverse operation.
Not with pressure regulator (15) ZE, ZJ (reversible pressure regulator plate)

13 **P, Q, R** Only permissible in zones with reverse operation or with pressure regulator (15) ZE, ZJ (reversible pressure regulator plate). Pilot pressure required on duct 12 (ducted exhaust air not possible).
Not with right-hand end plate (4) Y, Z

14 **ZA, ZF** Not permitted in zones with reverse operation.

15 **ZE, ZK, ZL, ZJ, ZM, ZN** Not permitted in zones with reverse operation.
Not with 2x 3/2-way valves (14) N, K, H

Pressure gauge					
	T	With cartridge connection for regulator, 10 bar for regulator plate, code ZA, ZB, ZC, ZD, ZE	18 mm 26 mm	**PAGN-26-16-P10**	**543 487**
	U	With cartridge connection for regulator, 6 bar for regulator plate, code ZF, ZG, ZH, ZI, ZJ	18 mm 26 mm	**PAGN-26-10-P10**	**543 488**
Cartridge for regulator plate					
	–	For tubing O.D. 4 mm		**QSP10-4**	**172 972**
	–	For tubing O.D. 3/16"		**QSP10-3/16U**	**172 975**
Flow control plate					
	X	Controls the flow of exhaust air after the valve to ducts 3 and 5	18 mm	**VABF-S4-2-F1B1-C**	**540 176**
			26 mm	**VABF-S4-1-F1B1-C**	**540 175**
Vertical shut-off plate					
	ZT	2/2-way valve for shutting off the operating pressure at the valve position	18 mm	**VABF-S4-2-L1D1-C**	**542 884**
			26 mm	**VABF-S4-1-L1D1-C**	**542 885**
Multi-pin node					
	T	Tension spring, for threaded connection, 36-pin		**VABE-S6-1LF-C-M1-C36M**	**543 412**
		Tension spring, for NPT connection, 36-pin		**VABE-S6-1LF-C-M1-C36N**	**543 413**
	MP1	Sub-D plug, 37-pin		**VABE-S6-1LT-C-M1-S37**	**543 414**
	MP4	Round plug, 19-pin		**VABE-S6-1LF-C-M1-R19**	**543 415**
Individual electrical connection					
	-MP2	Multi-pin node with individual connection M12, 6-way		**VABE-S6-LT-C-S6-R5**	**549 046**
	-MP3	Multi-pin node with individual connection M12, 10-way		**VABE-S6-LT-C-S10-R5**	**549 047**
	–	Cover for individual connection M12, 6-way		**VAEM-S6-C-S6-R5**	**549 048**
	–	Cover for individual connection M12, 10-way		**VAEM-S6-C-S10-R5**	**549 049**
Pneumatic interface					
	–	For electrical terminal CPX		**VABA-S6-1-X1**	**543 416**

Valve terminal type 45 VTSA-F

Designation	Code	Description		Type	Part No.
Cover for multi-pin plug					
	–	For user configuration		**NECV-S1W37**	**545 974**
Cover					
	L	Blanking plate for vacant position	18 mm	**VABB-S4-2-WT**	**539 213**
			26 mm	**VABB-S4-1-WT**	**539 212**
	N	Cover cap for manual override, pushing	10 pieces	**VAMC-S6-CH**	**541 010**
	V	Cover cap for manual override, covered	10 pieces	**VAMC-S6-CS**	**541 011**
	–	End cap for electrical manifold module, size 18 mm and 26 mm	10 pieces	**VABD-S4-E-C**	**547 713**
Inscription label holder					
	B	Clip-on inscription label holder for valve cap	5 pieces	**ASCF-T-S6**	**540 888**
	T	Inscription label holder for manifold blocks	5 pieces	**ASCF-M-S6**	**540 889**
Push-in fitting					
	Threaded connection				
	–	Connecting thread G¼ for tubing O.D. 10 mm	10 pieces	**QS-G¼-10**	**186 101**
		Connecting thread G¼ for tubing O.D. 8 mm	10 pieces	**QS-G¼-8**	**186 099**
		Connecting thread G⅛ for tubing O.D. 10 mm	10 pieces	**QS-G⅛-10**	**190 643**
		Connecting thread G⅛ for tubing O.D. 8 mm	10 pieces	**QS-G⅛-8**	**186 098**
		Connecting thread G⅛ for tubing O.D. 6 mm	10 pieces	**QS-G⅛-6**	**186 096**
		Connecting thread G½ for tubing O.D. 16 mm	1 piece	**QS-G½-16**	**186 105**
		Connecting thread G⅜ for tubing O.D. 10 mm	10 pieces	**QS-G⅜-10**	**186 102**
		Connecting thread G⅜ for tubing O.D. 12 mm	10 pieces	**QS-G⅜-12**	**186 103**
	NPT thread				
	–	Connecting thread ¼ NPT for tubing O.D. 5/16"		**QS-¼-5/16-U**	**153 609**
		Connecting thread ¼ NPT for tubing O.D. ½"		**QS-¼-½-U**	**190 681**
		Connecting thread ⅛ NPT for tubing O.D. 5/16"		**QS-⅛-5/16-U**	**153 608**
		Connecting thread ⅛ NPT for tubing O.D. ¼"		**QS-⅛-¼-U**	**153 605**
		Connecting thread ½ NPT for tubing O.D. ½"		**QS-½-½-U**	**153 615**
		Connecting thread ½ NPT for tubing O.D. ⅝"		**QS-½-⅝-U**	**190 682**
Silencer					
	Threaded connection				
	–	Connecting thread G¼		**U-¼**	**2316**
	L	Connecting thread G½		**U-½**	**2310**
	K	Connecting thread G½		**U-½-B**	**6844**
	NPT thread				
	–	Connecting thread ¼ NPT		**U-¼-B-NPT**	**12 639**
	K, L	Connecting thread ½ NPT		**U-½-B-NPT**	**12 741**
