### Parallel grippers HGPP, precision

### **FESTO**

#### At a glance

- Wide range of variants for greater flexibility:
  - Double-acting piston drive HGPP-...-A.
  - Compression springs for supporting or retaining gripper forces, or for use as a singleacting gripper with only one compressed air connection
- High precision gripper jaw guide
- Choice of gripping action
  - External gripping
  - Internal gripping
- Multiple compressed air connections
- Integrated sensing electronics
- Adaptable proximity sensor via mounting bracket
- Highly flexible thanks to versatile attachment, mounting and applications options
  - Drives
  - Externally adaptable gripper fingers
  - Guide plate
- 1 Compression spring closes gripper jaws: HGPP-...-G2
- 2 Compression spring opens gripper jaws: HGPP-...-G1
- 3 Synchronisation element
- 4 Backlash-free guide bearing

### Parallel grippers HGPP, precision

**FESTO** 

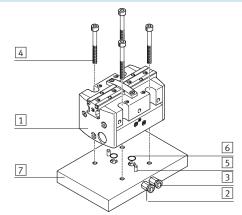

Features

#### Versatile air connections and mounting options

Supply port direct at the front, direct mounting from above

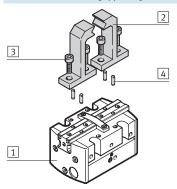

Supply port via adapter plate from underneath, direct mounting from above

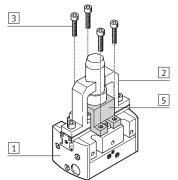

- 1 Parallel gripper
- 2 Compressed air connection, opening
- 3 Compressed air connection, closing
- 4 Mounting screws
- 5 Locating pins
- 6 0-rings
- 7 Plate (user-specific)

#### Range of applications (user-specific)

Attachment of external gripper fingers

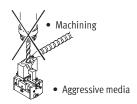

Used as guide plate

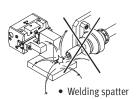

- 1 Parallel gripper
- 2 Gripper finger
- 3 Mounting screws
- 4 Locating pins
- 5 Guide plate

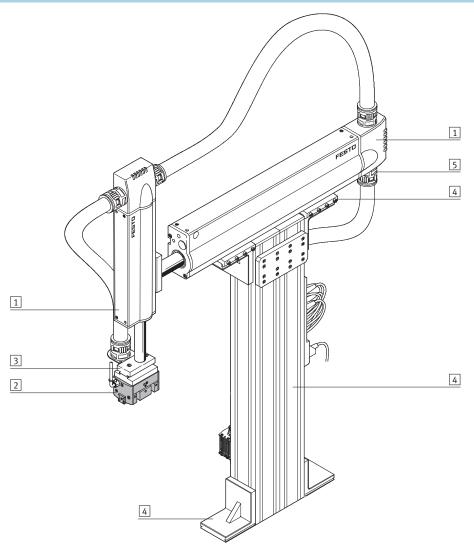

Grippers are not suitable for the following, or for similar applications:

#### System product for handling and assembly technology

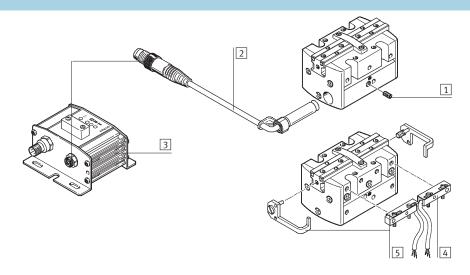

Syste	em elements and accessories		
		Brief description	→ Page/Internet
1	Drives	Wide range of combination options within handling and assembly technology	drive
2	Gripper	Diverse variation options in handling and assembly technology	gripper

	Conforms to RoHS				

#### Gripping force [N] at 6 bar

Size	10	12	16	20	25	32	
Gripping force per gripper jaw							
Opening	40	58	102	170	250	415	
Closing	40	58	102	170	250	415	
Total gripping force							
Opening	80	116	204	340	500	830	
Closing	80	116	204	340	500	830	

#### Characteristic load values at the gripper jaws

Indicated permissible forces and torques apply to a single gripper jaw. Static forces and torques relate to additional applied loads caused by the workpiece or external gripper fingers, as well as forces which occur

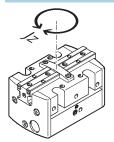

during handling. The zero co-ordinate line (gripper jaws point of rotation) must be taken into consideration for the calculation of torques. Additionally, max. permissible forces

which may be applied to the housing have been entered as well, which, for example, can be absorbed by a guide plate during pressing-in operations.

Size		10	12	16	20	25	32
Max. permissible force FZGripper jaws	[N]	40	70	130	220	380	720
Max. permissible force F <sub>ZHousing</sub>	[N]	200	400	600	800	1,000	1,200
Max. permissible torque $M_X$	[Nm]	1.5	3	7	14	21	30
Max. permissible torque M <sub>Y</sub>	[Nm]	1.5	3	7	14	21	30
Max. permissible torque M <sub>Z</sub>	[Nm]	1.5	3	7	14	21	30

#### Mass moment of inertia [kgm<sup>2</sup>x<sup>10-4</sup>]

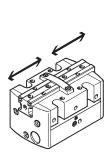

Mass moment of inertia [kgm²x10<sup>-4</sup>] for parallel grippers in relation to the central axis, without load.

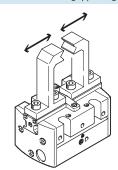

Size	10	12	16	20	25	32
HGPPA	0.43	0.73	2.39	6.22	16.68	38.34
HGPPG1	0.45	0.76	2.58	6.71	17.45	39.21
HGPPG2	0.43	0.74	2.45	6.27	16.85	38.63

#### Opening and closing times [ms] at 6 bar

without external gripper fingers

with external gripper fingers

The indicated opening and closing times [ms] have been measured at room temperature and 6 bar operating pressure with vertically mounted gripper and without external gripper fingers. Load is increased if external gripper fingers are attached. This means that kinetic energy is also increased, as this is determined by gripper finger weight and velocity. If permissible kinetic energy is exceeded, various parts of the gripper may be damaged. This occurs when

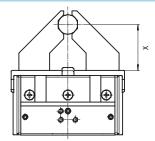

the applied load reaches the endposition and the cushioning is only able to partially convert the kinetic energy into potential energy and heat energy. It thus becomes apparent that the indicated max. permissible applied load due to the external gripper fingers must be checked and maintained. The grippers must be throttled for greater applied loads. Opening and closing times must then be adjusted accordingly.

Size		10	12	16	20	25	32
Without external gripper fi	ngers						
HGPPA	Opening	22	27	40	44	64	76
	Closing	34	40	53	59	92	110

**FESTO** 

#### Gripping force $\boldsymbol{F}_{\boldsymbol{H}}$ as a function of operating pressure and the lever arm $\boldsymbol{x}$

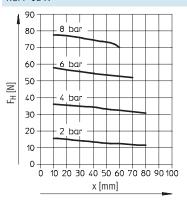

Gripping forces related to operating pressure and lever arm can be determined for the various sizes with the following graphs.

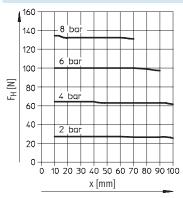

#### HGPP-10-A

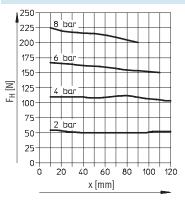

#### HGPP-12-A

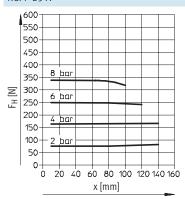

#### HGPP-16-A

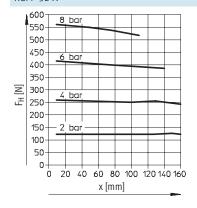

#### HGPP-20-A

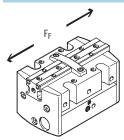

#### HGPP-25-A

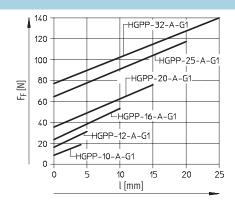

#### HGPP-32-A

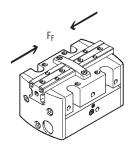

#### Spring force $F_F$ as a function of the gripper size and overall stroke length l

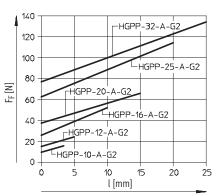

Gripper retention force, opening: the spring forces  $F_{F}\, of\, the\, parallel$ gripper HGPP-...-G1 can be determined from the following graphs.

Gripper retention force, closing: the spring forces  $F_F$  of the parallel gripper HGPP-...-G2 can be determined from the following graphs.

#### Determination of actual gripping forces for HGPP-...-G1 and HGPP-...-G2 depending upon the application

The parallel grippers with integrated spring can be used as:

Application

- single-acting grippers
- grippers with supplementary gripping force and
- grippers with gripping force retention

In order to calculate available gripping forces F<sub>Gr</sub> (per gripper jaw), gripping force (F<sub>H</sub>) and spring force (F<sub>F</sub>) must be combined accordingly.

	Single-acting
The resulting gripping force F <sub>Gr</sub> , conditional on the application, depends on the gripping action	• Gripping with s $F_{Gr} = F_F$
(external/internal gripping) and the gripper design (with/without spring return). The spring force is supplemented in accordance with the design and gripping action.	• Gripping with p $F_{Gr} = F_H - F_F$

- spring force:
- pressure force:
- Supplementary gripping force • Gripping with pressure and spring
- force:  $F_{Gr} = F_H + F_F$
- Gripping force retention
- Gripping with spring force:  $F_{Gr} = F_F$

		Pressurised (in gripping action)	Unpressurised
HGPPA	Internal gripping	$F_{Gr} = F_H$	$F_{Gr} = 0$
	External gripping	$F_{Gr} = F_H$	$F_{Gr} = 0$
HGPPG1	Internal gripping	$F_{Gr} = F_H + F_F$	$F_{Gr} = F_F$
	External gripping	$F_{Gr} = F_{H-}F_{F}$	$F_{Gr} = 0$
HGPPG2	Internal gripping	$F_{Gr} = F_{H-} F_{F}$	$F_{Gr} = 0$
	External gripping	$F_{Gr} = F_H + F_F$	$F_{Gr} = F_F$

**FESTO** 

#### Gripping force F<sub>H</sub> at 6 bar as a function of lever arm x and eccentricity y

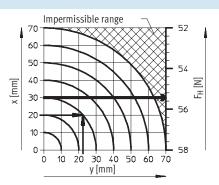

Gripping forces at 6 bar dependent upon eccentric application of force and the maximum permissible off-centre point of force application can be determined for the various sizes using the following graphs.

#### Calculation example

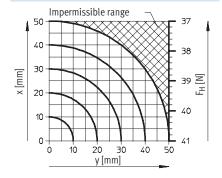

Given: Gripper HGPP-12-A Lever arm x = 20 mmEccentricity y = 22 mm To be found: Gripping force at 6 bar

#### Procedure:

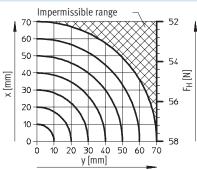

- Determine the intersection xy between lever arm x and eccentricity y in the graph for HGPP-12-A
- Draw an arc (with centre at origin) through intersection xy
- Determine the intersection between the arc and the X axis
- Read gripping force Result: Gripping force = approx. 55 N
