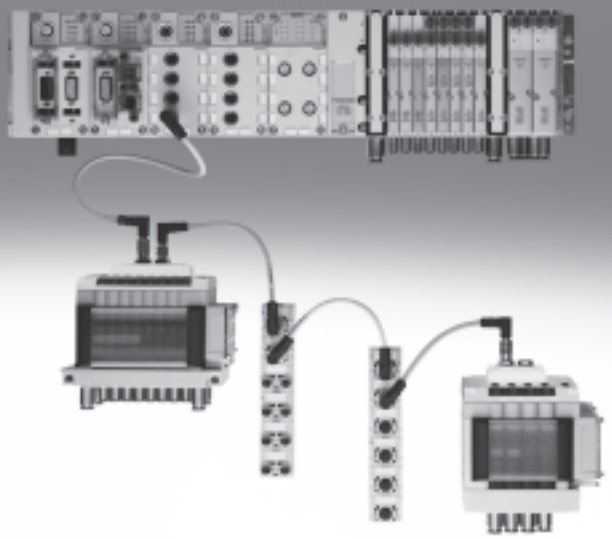
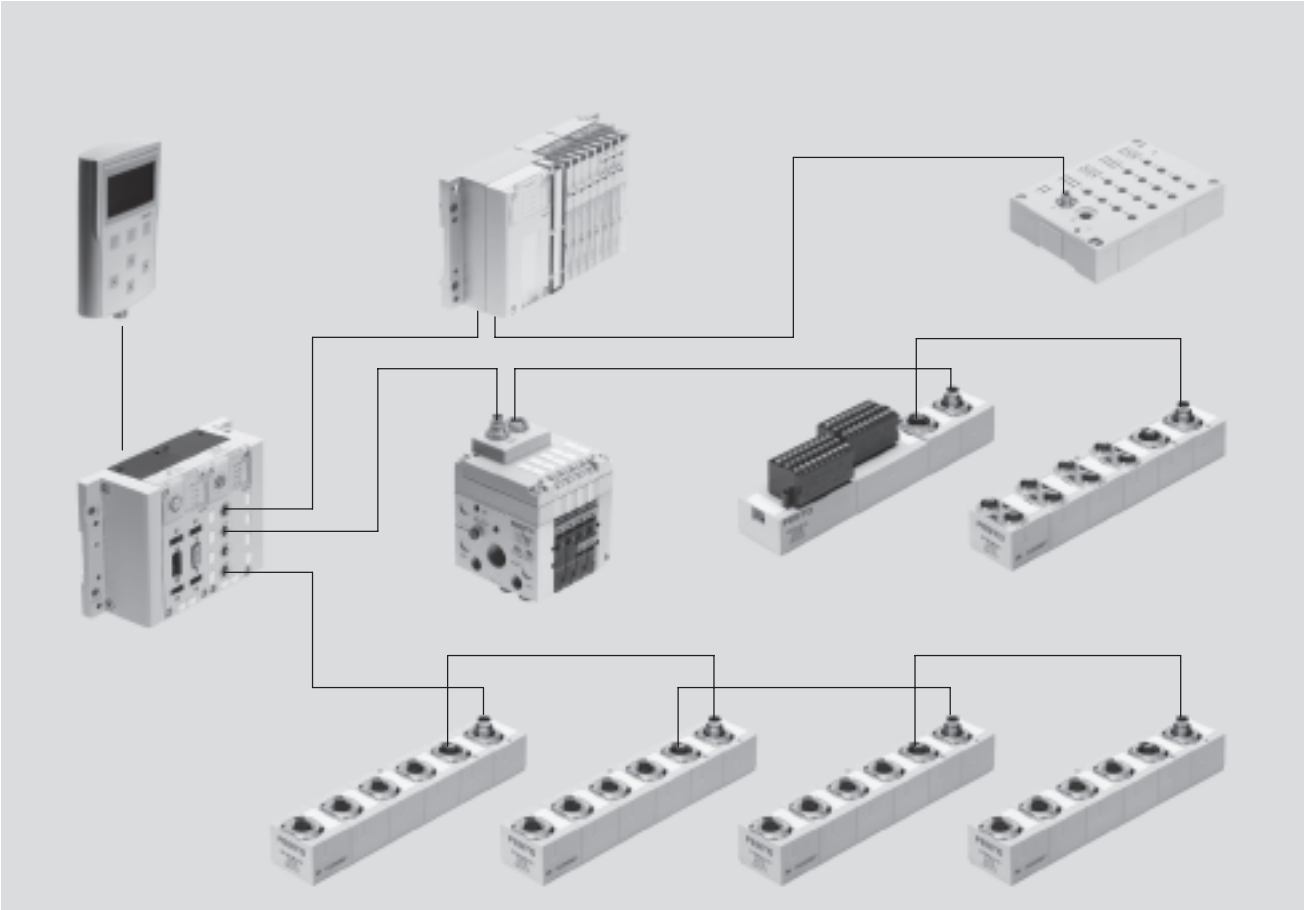
CPI installation system

FESTO



CPI installation system

Key features



Innovative

- Complete concept for decentralised machine and system structure; centralised and decentralised installation can be combined with the CPX terminal
- Decentralised pneumatics and sensors for fast processes
- Centralised electrics for fieldbus and common power supply
- Flexible configuration of the individual CP strings
- Selectable valve terminal sizes for optimum pneumatic control loop systems
- Performance data as for the CP system with the addition of the comprehensive diagnostic capabilities of the CPX terminal

Sturdy

- Electrical accessories to IP65
- Proven valve terminals CPV (compact), MPA (sturdy, modular), CPV-SC (small, compact) and CPA (modular manifold sub-bases)
- Electrical input and output modules in metal housing or compact in encapsulated plastic housing
- Sturdy connection technology M12, alternatively M8
- IP20 modules for control cabinet installation with spring-loaded terminals or screw terminals

Versatile

- A number of CP interfaces can be combined under one fieldbus node
- Four CP strings up to 10 m in length (radius) facilitate optimum decentralisation
- Max. 32 inputs and 32 outputs/valves per string
- Available valves:
  - Valve terminal type 32 MPA, flow rate max. 700 l/min
  - Valve terminal type 10 CPV, flow rate max. 1,600 l/min
  - Valve terminal type 80 CPV-SC, flow rate max. 170 l/min
  - Valve terminal type 12 CPA, flow rate max. 650 l/min
- Input modules with 8 ... 32 inputs and output modules with 4 ... 8 outputs, each with or without additional power supply
- Universal electrical outputs

Reliable

- Sturdy modules and accessories
- Ready to install system including CP cable (hybrid cable for data and power)
- Polarity-safe and short circuit proof connections
- Valves with separate load voltage supply
- All modules equipped with local diagnostics and status LEDs
- Diagnostics of each CP string via controller/fieldbus
- Intelligent system (save button) ”learns” current configuration
- Easy replacement of modules at any time

CPI installation system

Key features

CPI installation system

The CPI system is capable of meeting two completely different requirements and resolves the conflict between extensive decentralised modularisation and electrical installation.

High-speed machines require short cycle times and short pneumatic tubing. The valves must be mounted close to the cylinders. The CPI system was developed to meet these requirements without having to wire each valve individually.

The system integrates the modular valve terminals CPV, the manifold sub-base valve terminal CPA and various input/output modules in a single installation concept.

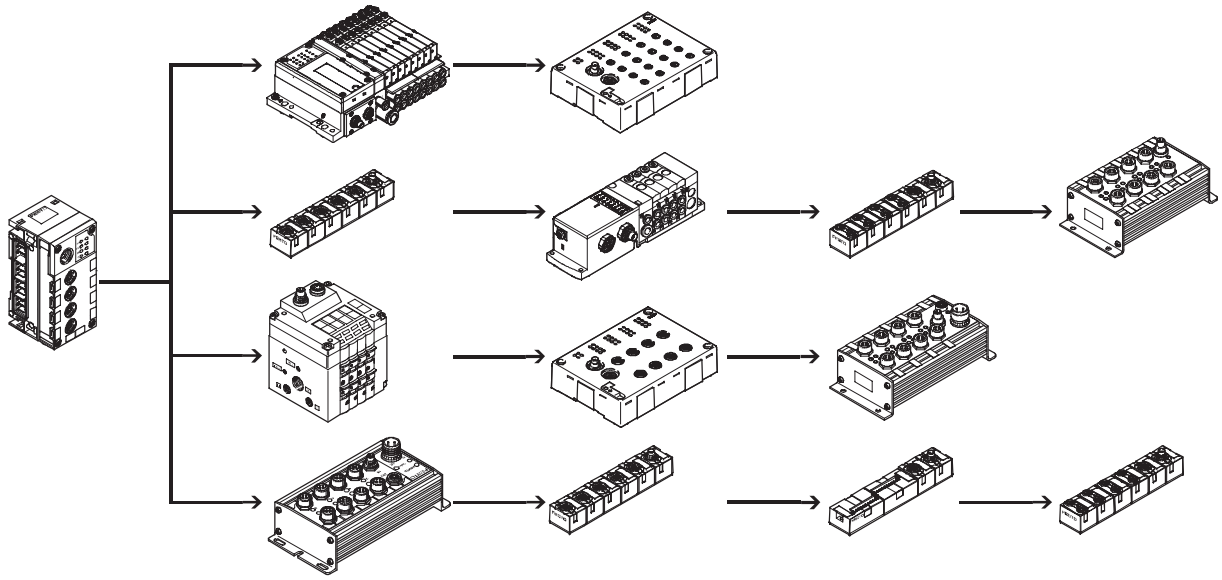
All CP valve terminals and CP modules are connected using a ready to install CP cable, and are attached to the CP interface. Four modules, for example one CPV valve terminal and one to three CP input modules, make up an installation string that ends at the CP interface.

Scope of features:

- Max. 4 installation strings per CP interface
- Max. 10 metre line length per string (radius)
- Max. 4 CP modules per string
- Max. 32 inputs and max. 32 outputs per string

The number of CP modules that can be connected and the number of inputs/outputs is dependent on the type of CP module and CP interface.

The maximum configuration (4 modules per string, 32 inputs/outputs) is only possible in combination with the CPX terminal and CP modules with CPI functionality. The CP interface is the central connection point for the valve power supply and the sensor supply. The power supply for the sensors connected to the input modules is separate from the load voltage of the valves.



CPI installation system

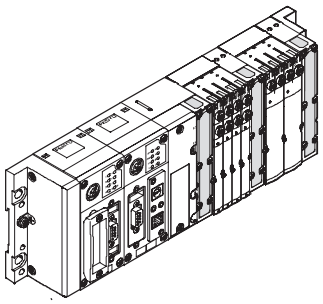
Integration of the CPI installation system in various connection concepts

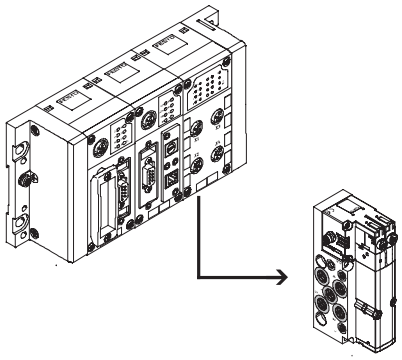
Centralised pneumatic connection (valve terminal)



Advantages
- Pneumatic multiple connector plate
- Less tubing required than with individual valves
- Common valve air supply
- Central positioning
- Material, weight and cost savings

Disadvantages
- Only effective with a large number of closely spaced actuators
- Heavier than an individual valve (lower overall weight than the same number of individual valves), which may make assembly on moving systems or in very cramped installation spaces difficult
- Longer tube lengths are occasionally required, ruling out the possibility of optimum pneumatic performance

Decentralised pneumatic connection (individual valve/valve on individual sub-base)

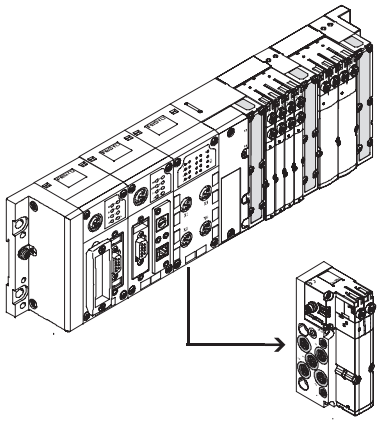


Advantages
- Can be positioned directly at the actuator, can even be integrated
- Short tubing length to the actuator enables short switching times
- Optimum pneumatic timing and performance possible

Disadvantages
- Air supply per valve requires more tubing
- Serial electrical interlinking not advisable/possible
- More complex electrical installation

Integration of the CPI installation system in various connection concepts

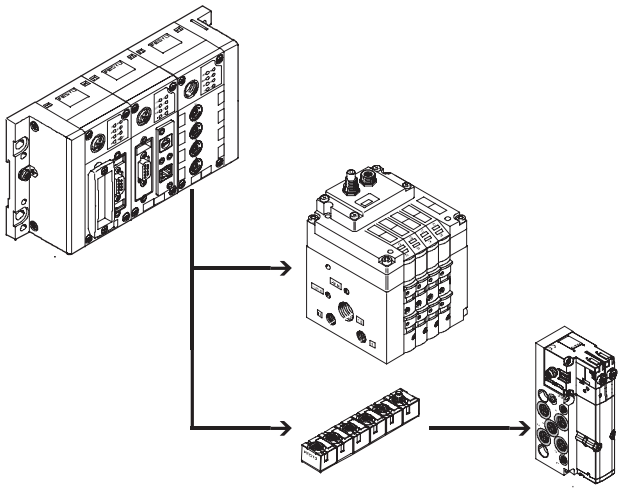
Centralised electrical connection (multi-pin plug/fieldbus connection/standalone minicontroller)



Advantages
- Internal electrical interlinking requires less cabling
- Increased transparency
- Material, weight and cost savings
- Ideal for connecting a large number of closely spaced valves

Disadvantages
- Not suitable for individual, more widely separated applications due to the more complex cabling
- More complex individual components (cables, fieldbus modules)

Decentralised electrical connection (CPI system/individual valve/valve on individual sub-base/valve manifold)

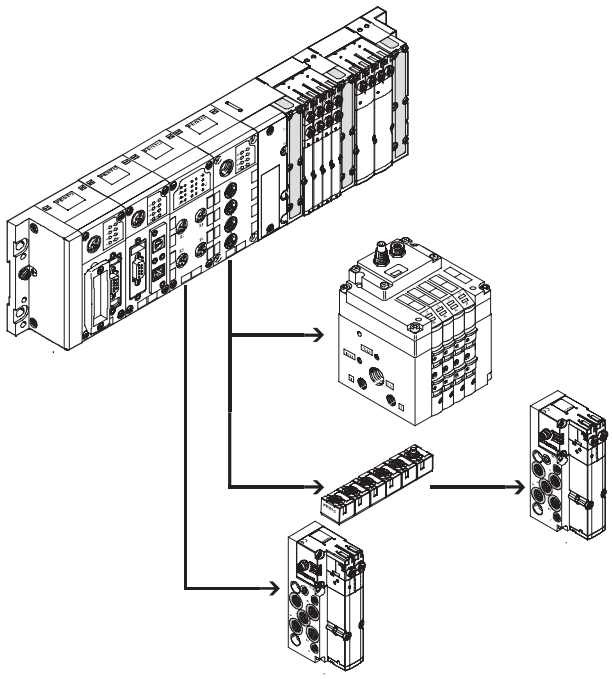


Advantages
- CPI system with reduced installation complexity for groups of actuators/sensors
- Different levels of complexity with widely separated individual components
- Easy replacement of components during servicing
- Optimum pneumatic timing and performance possible

Disadvantages
- Limited spatial expansion possible (CPI system up to 10 m, AS-interface up to 100 m)
- High installation costs

Integration of the CPI installation system in various connection concepts

Combined centralised and decentralised connection (valve terminal with CP interface/output module)



Advantages

- Can be scaled to different requirements within a system
- One control interface in the system, reduces installation complexity with closely and widely spaced actuators
- Enables an optimum electrical and pneumatic control chain

Disadvantages

- Application must at least partially meet the requirements of a centralised connection

Connection of the CPI installation system to a higher-level controller

Fieldbus node/Industrial Ethernet

Different bus nodes are used for integration in the control systems of various manufacturers.
The CPI system can therefore be operated via more than 90% of the most commonly used fieldbus systems.

- Profibus DP
- Profinet
- Interbus
- DeviceNet
- Ethernet IP
- CANopen
- CC-Link

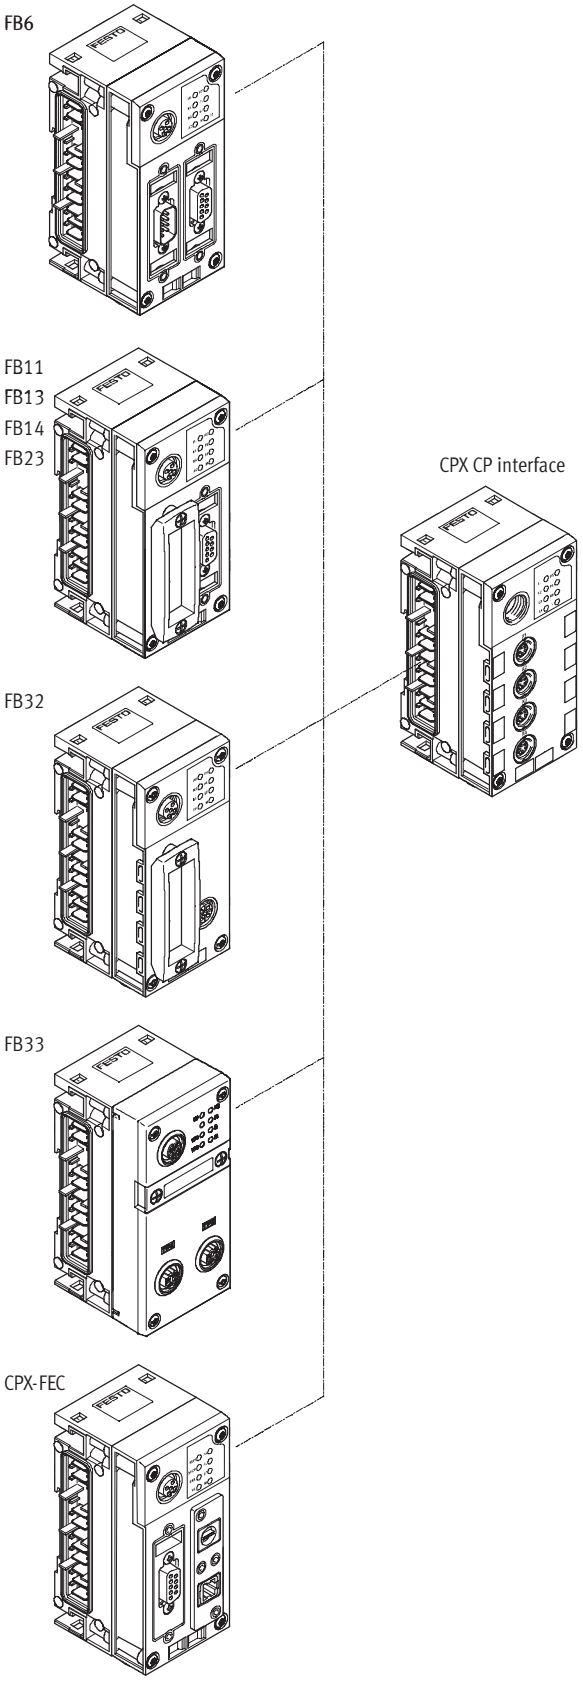
Control block

The optional Front End Controller CPX-FEC enables simultaneous access via Ethernet and an integrated web server, as well as autonomous pre-processing.

- Ethernet
- TCP/IP
- Web

Connection of the CPI installation system to a higher-level controller

Overview



Bus protocol/fieldbus node	Special features
Interbus	
FB6	• Up to 96 digital inputs/outputs • 6 analogue inputs/outputs
DeviceNet	
FB11	• Up to 512 digital inputs/outputs • 18 analogue inputs/outputs
Profibus DP	
FB13	• Up to 512 digital inputs/outputs • 18 analogue inputs/outputs
CANopen	
FB14	• Up to 64 digital inputs and 64 digital outputs • 8 analogue inputs and 8 analogue outputs
CC-Link	
FB23	• Up to 64 digital inputs/outputs • 16 analogue inputs/outputs
Ethernet/IP	
FB32	• Up to 128 digital inputs/outputs • 8 analogue inputs/outputs
PROFINET RT	
FB33	• Up to 512 digital inputs/outputs • 32 analogue inputs/outputs
EtherCAT	
FB38	• Up to 512 digital inputs/outputs • 32 analogue inputs/outputs
Control block FEC	
• Modbus TCP • Easy-IP • Interbus, DeviceNet, Profibus DP, CANopen and CC-Link via combination with CPX fieldbus node • TCP/IP and web connection via Ethernet interface	• Up to 512 inputs/outputs • Several CP interfaces can be connected • Ethernet fieldbus slave in remote I/O operating mode (T05) • Autonomous control of the CPI system as a remote controller (T03)

Connection of modules in the CPI installation system

CP interface within the context of the CPX terminal

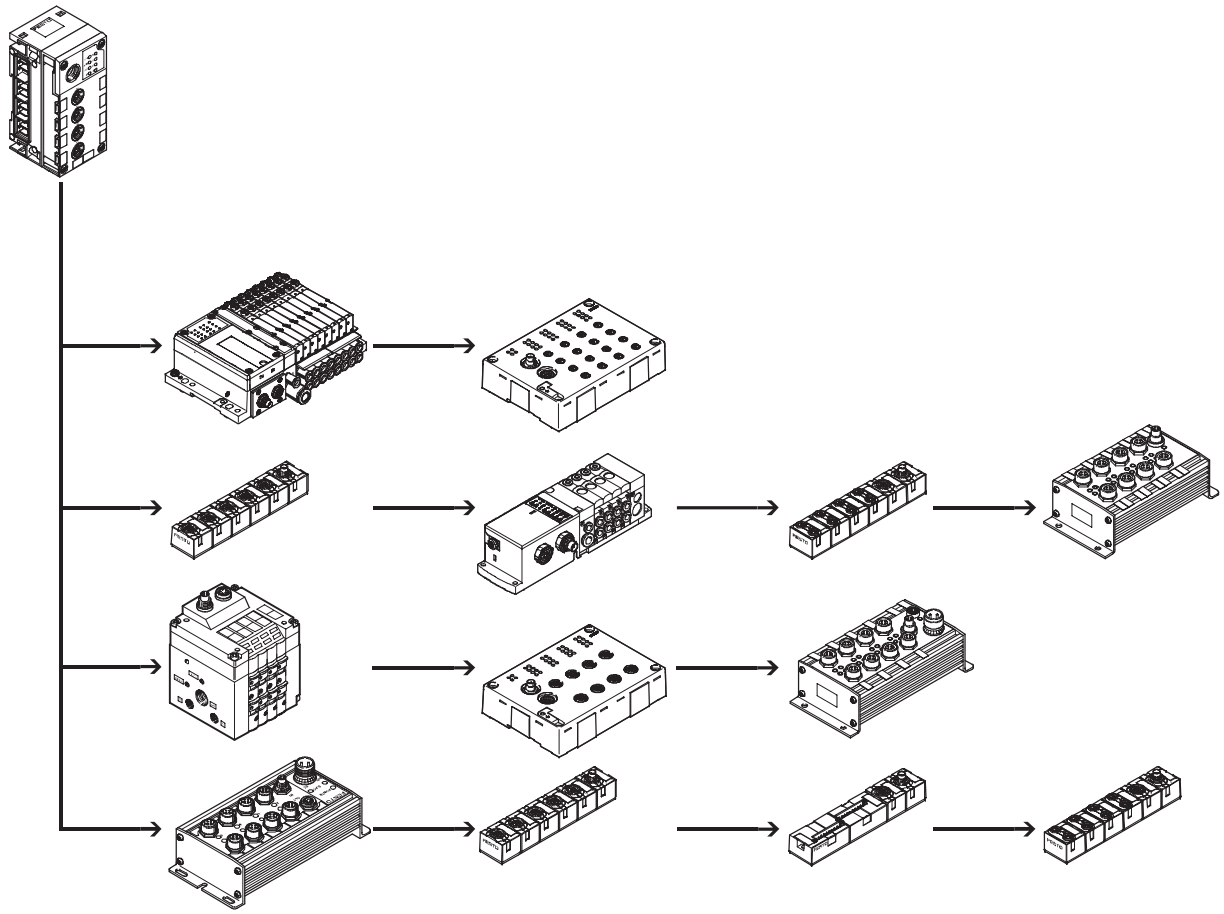
Using the CP interface as a module of the CPX terminal facilitates the progression from the CP system to the CPI system.
All CP modules are both downwards and upwards compatible and can therefore be used in the CP system and in the CPI system.

This extension has doubled the scalability and range of CP modules that can be used:

- 4 CP strings
- Up to 4 modules per string
- Up to 32 inputs and outputs per CP string

An added advantage of the CPI system is its extremely user-friendly access possibilities via the CPX fieldbus node and the CPX-FEC:

- Data pre-processing
- Diagnostics via software
- Reading out of status information
- Display via permanently installed or mobile unit
- Remote maintenance with CPX-FEC and Ethernet connection



CPI installation system

Connection options

Fieldbus Direct

Special feature

The Fieldbus Direct product range is the most compact way of connecting valves to a fieldbus. The fieldbus node is directly integrated in the electrical actuation of the valve terminal and therefore takes up only a minimal amount of space.

Application

Fieldbus Direct is a system for the compact connection of a valve terminal to nine different fieldbus standards. The most important fieldbus protocols including Profibus, Interbus, DeviceNet and CANopen are supported. The CP string extension option allows the functions and components of the CPI installation system to be used.

Characteristics of Fieldbus Direct

- Extremely compact and space-saving design
- Low-cost solution for the connection of a small number of valves to the fieldbus
- Direct front-end integration with a high degree of protection (IP65)
- Comprehensive diagnostics and condition monitoring

Note

The range of functions and combination options of CPV, CPV-SC, CPA-SC, CDVI and MPA valves are described in detail in

➔ Internet: type 80 (Valve terminal CPV-SC)
➔ Internet: cpasc (Valve terminal CPA-SC)
➔ Internet: type 15 (Valve terminal CDVI)
➔ Internet: type 10 (Valve terminal CPV)
➔ Internet: type 32 (Valve terminal MPA)

Fieldbus Direct and CP string extension

The optional string extension allows a further valve terminal and I/O modules to be connected to the Fieldbus Direct fieldbus node.

- A CP string of the CP system is integrated in the fieldbus node as an extension
- Different input and output modules as well as CPV, CPA and MPA valve terminals can be connected

The maximum length of the CP string extension is 10 metres, which means that the extension modules can be mounted directly on-site. All of the required electrical signals including load current supply are transmitted via the CP cable, which in turn means that no further installation is needed on the expansion module.

The CP string interface offers:

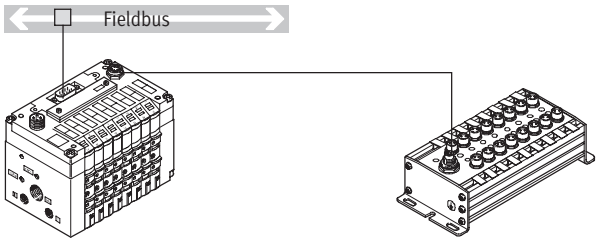
- Max. 32 input signals
- Max. 32 output signals for output modules 24 V DC or solenoid coils
- Logic and sensor supply for the input modules
- Load voltage supply for the valve terminals
- Logic supply for the output modules

CPI installation system

Connection options

Fieldbus Direct with CP string extension

CPV valve terminal



- 4 to 8 valve positions
- DeviceNet
- CANopen
- Profibus DP
- ABB CS31
- Interbus
- Moeller Suconet
- Festo fieldbus
- Beckhoff
- CC-Link
- 4 to 16 solenoid coils

CPI installation system

Connection options

Positioning systems

Application

The SPC200 is a position controller (closed loop) and positioning control (open loop) in one. Together with the drive, the displacement encoder and the proportional directional control valve, it forms a closed control loop.

The CP interface option enables the functions and components of the CP installation system to be used.

Properties

- Modular with 9 different plug-in cards
- Wide variety with up to 4 positioning axes, stepper motor axes and the option of operating pneumatic and electrical systems
- Flexible with set selection for positioning tasks with fixed trajectories and program mode with up to 100 programs
- Quick commissioning using the WINPISA diagnostic and programming tool

Positioning systems and CP interface

The plug-in cards for connecting the axis strings facilitate the connection of further input/output modules:

- One CP string of the CP system is possible as an extension
- Various input and output modules as well as CPV valve terminals can be connected

The maximum length of the CP string extension is 10 metres, which means that the extension modules can be mounted directly on-site. All of the required electrical signals including load current supply are transmitted via the CP cable, which in turn means that no further installation is needed on the extension module.

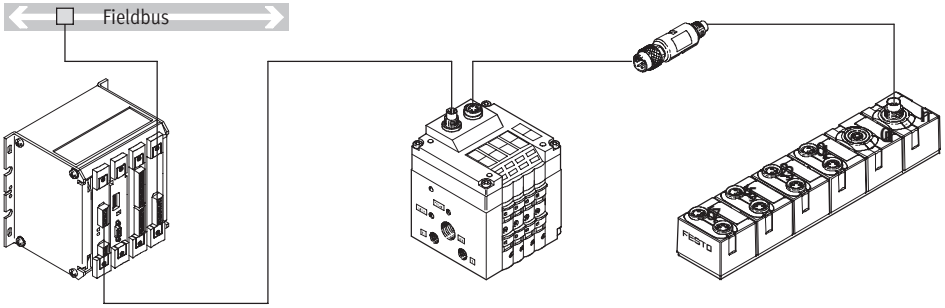
The CP string interface offers:

- 16 input signals
- 16 output signals for output modules 24 V DC or solenoid coils
- Logic and sensor supply for the input modules
- Load voltage supply for the valve terminals
- Logic supply for the output modules

Note

CP input modules can only be connected via a terminating resistor (KZW-M9-R100).

Axis controller SPC200 with CP interface



- Max. 64 inputs and 64 outputs via fieldbus
- DeviceNet, Interbus or Profibus connection

Further information

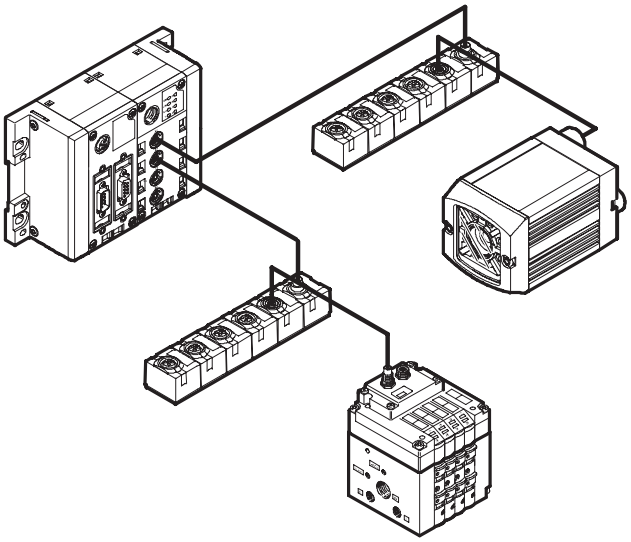
Compact vision system SBOC-Q/SBOI-Q with CP interface



The compact vision system SBOx-Q can be integrated into a Festo CPI network. In this case it functions like a binary module with 16 inputs and outputs.
In combination with a CPX-CPI module and a CPX fieldbus, for example, the camera can be accessed via Profibus DP, Interbus, DeviceNet, CANopen and CC-Link.

- Address requirement: 16 digital inputs/outputs
- CPI connection

CP input/output modules in sturdy, universal and compact design or as a valve terminal

The connection technology for the sensors and additional actuators offers a wide range of digital and analogue input and output modules and is freely selectable – depending on your standard or application:

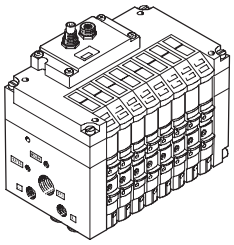
- M12-5PIN
- M8-3PIN
- M8-4PIN
- Spring-loaded terminal or screw terminal technology

The maximum number of inputs/outputs that can be connected to the individual modules can vary depending on the application. The following module sizes are available:

- Input modules with 8, 16 or 32 channels
- Output modules with 4 or 8 channels
- CPV with 4, 6 or 8 valve slices (max. 16 valves)
- MPA with 2 ... 32 valves
- CPV-SC with 4 ... 16 valves
- CPA with 2 ... 16 valves

Valve terminals with CP interface

CPV valve terminal

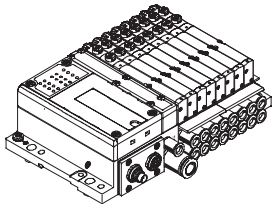


CPV10
CPV14
CPV18

- Max. 16 valves in 8 valve slices
- Highly compact and space-saving
- Width 10, 14, 18 mm
- Nominal flow rate 400/800/1600 l/min
- CPV10 and CPV14 with CPI functionality
- CPV18 with CP functionality

Further information
➔ Internet: type 10 (Valve terminal CPV)

MPA valve terminal

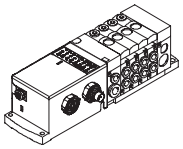


MPA1
MPA2

- Max. 32 valves
- Modular and versatile
- Width 10, 20 mm
- Nominal flow rate 360/700 l/min
- CPI functionality

Further information
➔ Internet: type 32 (Valve terminal MPA)

CPV-SC valve terminal

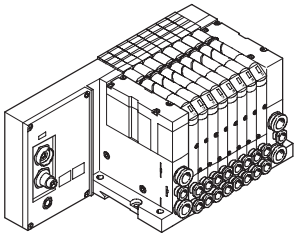


CPV-SC

- Max. 16 valves
- Extremely compact
- Width 10 mm
- Nominal flow rate 170 l/min
- CPI functionality

Further information
➔ Internet: type 80 (Valve terminal CPV-SC)

CPA valve terminal



CPA10
CPA14

- Max. 16 valves
- Width 10, 14 mm
- Nominal flow rate 300/600 l/min
- CP functionality

Further information
➔ Internet: type 12 (Valve terminal CPA)

Connection of input and output modules in the CPI installation system

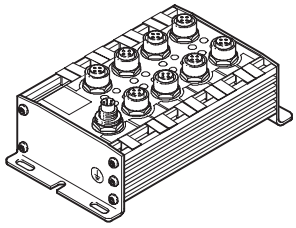
Special features of the CP input/output modules of sturdy design

The sturdy CP input/output modules have a highly resistant aluminium housing and its internal electronic components can be repaired or replaced.

As a CP-E...Z or output modules they have a separate load voltage supply, which means less load on the CP interface and CP cable and more power for the connected consuming devices. This also facilitates separate disconnection of the consuming devices.

High degree of protection (IP65), surpassed only by the compact CP modules with IP65/67 protection. The only exception is the IP20 protection offered by the module with clamped terminal connection for installation in control cabinets.

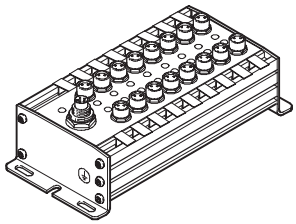
CP input modules of sturdy design



CP-E16-M12x2-5POL
CP-E16N-M12x2

- 16 inputs 24 V DC
- Signal status display via 16 LEDs
- Operating status display
- CP functionality

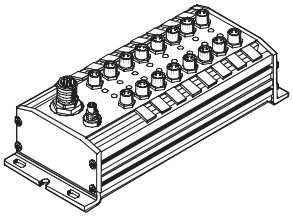
- M12 plug, double allocation
- 1x M9 CP connection
- PNP/NPN, IP65



CP-E16-M8
CP-E16N-M8

- 16 inputs 24 V DC
- Signal status display via 16 LEDs
- Operating status display
- CP functionality

- M8 plug, single allocation
- 1x M9 CP connection
- PNP/NPN, IP65

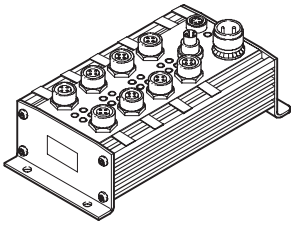


CP-E16-M8-Z

- 16 inputs 24 V DC
- Signal status display via 16 LEDs
- Operating status display
- CP functionality

- Galvanic isolation through additional power supply
- M8 plug, single allocation
- 1x M9 CP connection
- Separate sensor supply
- PNP/NPN, IP65

CP output modules of sturdy design



CP-A08-M12-5POL
CP-A08N-M12

- 8 outputs 24 V DC
- Output signal display via 8 LEDs
- Operating status display
- M12 plug, single allocation
- CP functionality

- 2x M9 CP connection
- Separate load voltage
- Outputs resistant to overloads and short circuits
- PNP/NPN, IP65

CPI installation system

Key features – Input/output modules

FESTO

Connection of input and output modules in the CPI installation system

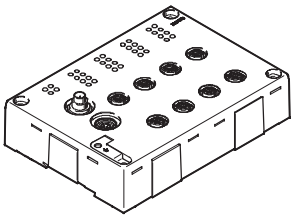
Special features of the CP input/output modules of economical design

In addition to the sturdy CP input/output modules and the compact CP input/output modules, there are also the economical modules with the design features of the compact modules, but with a greater number of inputs/outputs.

The economical CP modules feature a compact design, coupled with a large number of inputs/outputs.
The modules can be used in connection with the following valve terminals:
- CPV, MPA, CPV-SC, CPA-SC, CDVI, CPA

Application:
- Same function, configuration and commissioning as sturdy or compact CP modules
- Integrated H-rail mounting and earthing plate
- Centrally placed status and diagnostic LEDs
- The economical CP modules and the other CP modules can be operated together on a string
- The maximum number of modules per CP string is as follows:
  - CPI system: max. 4 modules or max. 32 inputs and 32 outputs
  - CP system: one valve terminal/output module and one input module

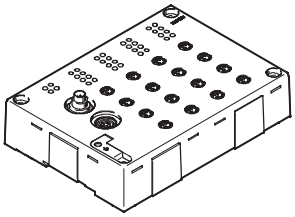
CP input modules of economical design



CP-E16-M12-EL

- 16 inputs 24 V DC
- Signal status display via 16 LEDs
- Operating status display (per module and per group of four inputs)
- CPI functionality

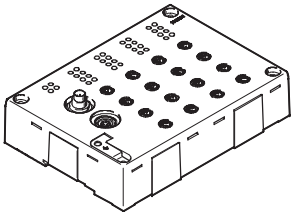
- 8x M12 plug, 5-pin, double allocation
- 2x M9 CP connection
- PNP, IP65



CP-E16-M8-EL

- 16 inputs 24 V DC
- Signal status display via 16 LEDs
- Operating status display (per module and per group of four inputs)
- CPI functionality

- 16x M8 plug, 3-pin, single allocation
- 2x M9 CP connection
- PNP, IP65

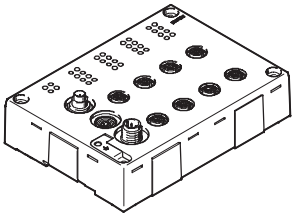


CP-E32-M8-EL

- 32 inputs 24 V DC
- Signal status display via 32 LEDs
- Operating status display (per module)
- CPI functionality

- 16x M8 plug, 4-pin, double allocation
- 2x M9 CP connection
- PNP, IP65

CP output modules of economical design



CP-A08-M12-EL-Z

- 8 outputs 24 V DC
- Signal status display via 4 LEDs
- Operating status display (per module and per channel/output)
- CPI functionality

- 8x M12 plug, 5-pin, double allocation
- 2x M9 CP connection
- Outputs resistant to overloads and short circuits
- PNP, IP65

CPI installation system

Key features – Input/output modules

Connection of input and output modules in the CPI installation system

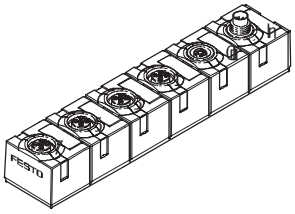
Special features of the CP input/output modules of compact design

In addition to the sturdy and economical CP input/output modules, there is also the compact series of CP input/output modules. These have an optimised, compact design, are made from plastic and are very light. They are, of course, available with the high degree of protection IP65/67 (exception: terminal modules in IP20 for installation in a protected fitting space).

The compact CP modules are designed for use in handling and assembly wherever space requirements and product weight play a role.
The modules can be used in connection with the following valve terminals:
- CPV, MPA, CPV-SC, CPA-SC, CDVI, CPA

Application:
- The modules can be positioned closer to the actuators thanks to the smaller dimensions
- Same function, configuration and commissioning as sturdy or economical CP modules
- The compact CP modules and the other CP modules can be operated together on a string
- The maximum number of modules per CP string is as follows:
  - CPI system: max. 4 modules or max. 32 inputs and 32 outputs
  - CP system: one valve terminal/output module and one input module

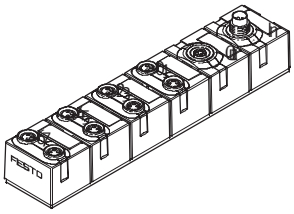
CP input modules of compact design



CP-E08-M12x2-CL

- 8 inputs 24 V DC
- Signal status display via 8 LEDs
- Operating status display
- CPI functionality

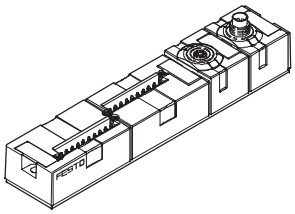
- 4x M12 plug, 5-pin, double allocation
- 2x M9 CP connection
- PNP, IP65/67



CP-E08-M8-CL

- 8 inputs 24 V DC
- Signal status display via 8 LEDs
- Operating status display
- CPI functionality

- 8x M8 plug, 3-pin, single allocation
- 2x M9 CP connection
- PNP, IP65/67

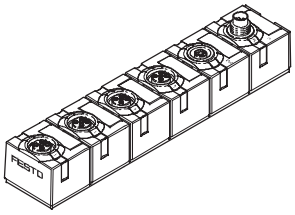


CP-E16-KL-CL

- 16 inputs 24 V DC
- Indirect signal status display via LEDs in the connection set of the tension-spring socket
- Operating status display
- CPI functionality

- Screw terminal or tension-spring sockets
- 2x M9 CP connection
- PNP, IP20

CP output modules of compact design



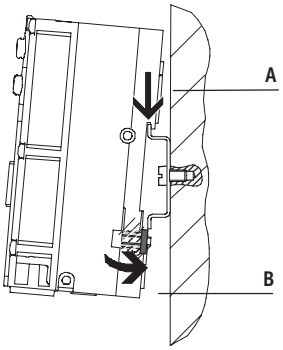
CP-A04-M12x2-CL

- 4 outputs 24 V DC
- Signal status display via 4 LEDs
- Operating status display
- CPI functionality

- 4x M12 plug, 5-pin, double allocation
- 2x M9 CP connection
- Outputs resistant to overloads and short circuits
- PNP, IP65/67

H-rail mounting

CP interface



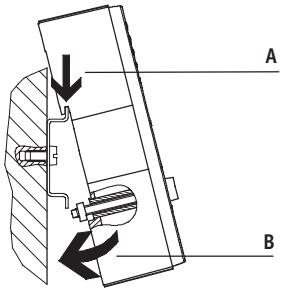
The H-rail mounting is formed in the reverse profile of the CPX interlinking blocks. The CPX terminal can be attached to the H-rail using the H-rail mounting.

The CPX terminal is attached to the H-rail as follows (see arrow A).
It is first swivelled on the H-rail and then secured in place with the clamping component (see arrow B).

The following mounting kit is required for H-rail mounting (plus mounting kit for optionally mounted valves):
- CPA-BG-NRH

This enables mounting on H-rails to EN 60715.

Economical CP modules



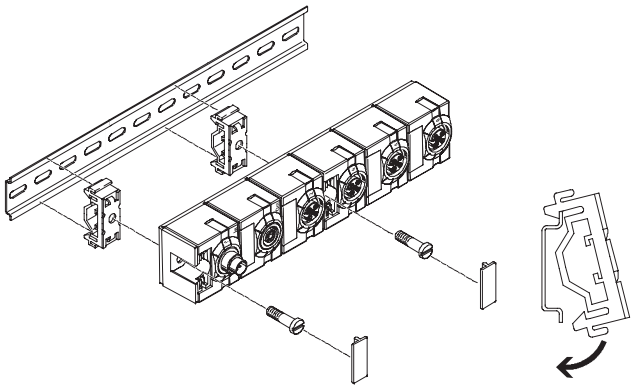
The H-rail mounting is impressed in the reverse profile of the economical CP modules. The modules can be attached to the H-rail using the H-rail mounting.

The module is attached to the H-rail as follows (see arrow A).
It is first swivelled on the H-rail and then secured in place with the clamping component (see arrow B).

The scope of delivery includes the following mounting kit for H-rail mounting:
- CP-EL-HS

This enables mounting on H-rails to EN 60715.

Compact and sturdy CP modules



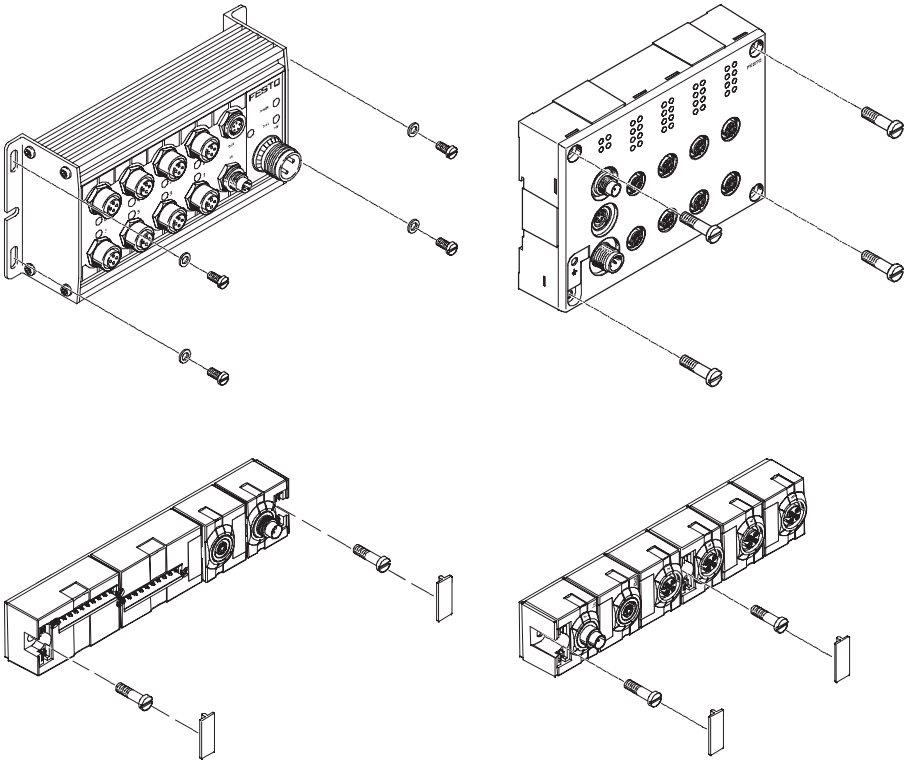
For the CP modules there is a mounting kit that can be used on an H-rail. On the compact CP modules, the mounting holes are covered by inscription labels.

The following mounting kit is required for H-rail mounting:
- CP-TS-HS35

This enables mounting on H-rails to EN 60715.

Wall mounting

CP modules



The CP modules (with screws up to 4 mm in diameter) can be mounted on even surfaces in almost any position using the mounting holes.

Note

The mounting holes on the compact CP modules are covered by inscription labels.

Inscription system

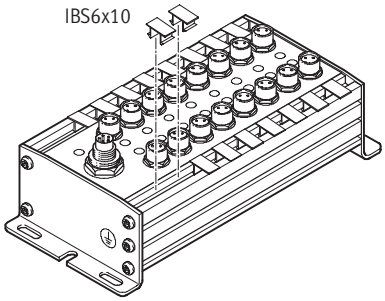
All CP modules have holders for inscription labels.

Inscription labels/holders are not included in the scope of delivery and can be ordered separately.

The labels can be pre-assembled on request.

Robust CP modules

IBS6x10

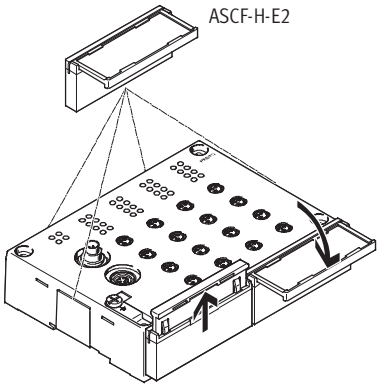


The sturdy CP modules have two slots in which the inscription labels IBS6x10 (Part No. 18576) can be fitted. At least one inscription label can be fitted per connection.

The IBS6x10 are plastic clips that can be printed on, written on or affixed with labels.

Economical CP modules

ASCF-H-E2

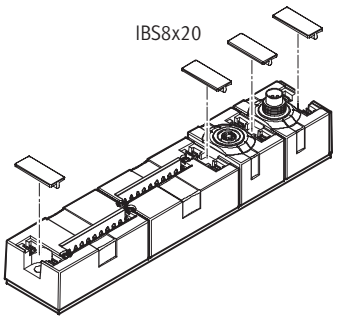


The economical CP modules have six lateral fixtures for one inscription label holder ASCF-H-E2 each (Part No. 547473).

The ASCF-H-E2 are transparent hinged label holders for holding pre-assembled paper inscription labels.
The label can be read when the label holder is opened out.

Compact CP modules

IBS8x20



The compact CP modules have a holder for an inscription label IBS8x20 (Part No. 539388) for each connection.

The IBS8x20 are plastic clips that can be printed on, written on or affixed with labels.

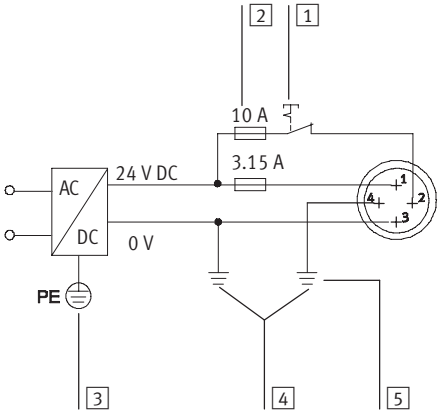
Operating voltage and load current supply

The following functions are made available to the connected modules through the CP cable:
- Connection for data exchange
- Operating voltage for internal electronics
- Load current supply for the connected inputs/sensors and/or outputs/actuators

CP-E...Z or output modules from the sturdy and the economical series have a separate load voltage supply:
- Less load on the CP interface and CP cable
- 0.5 A per output (max. 4 A supply per output module)
- 1 A per 8 inputs
- Separate disconnection of the consuming devices possible

Every module in the CPI system is protected separately against overload with electronic fuses.
The input modules without additional supply provide a maximum sensor supply of 500 mA in the sturdy design, 800 mA in the compact design and 700 mA in the economical design with 16 inputs and 1400 mA with 32 inputs.
The input modules with additional supply provide up to 2 A residual current for the connected sensors.

Example of circuits for additional power supply



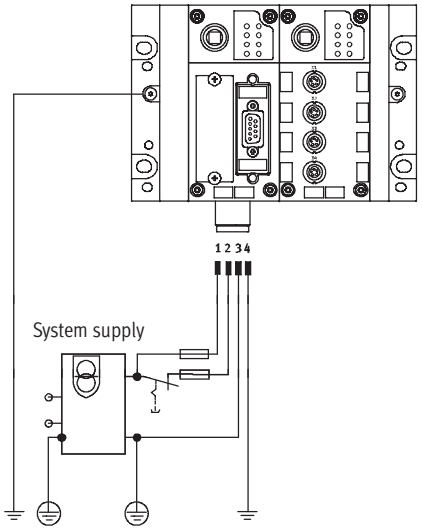
1 Load voltage supply (can be disconnected separately)
2 External fuses
3 Protective earth
4 Equipotential bonding
5 Earth terminal on pin 4, rated for 12 A

Pin allocation of plug for additional power supply

Pin allocation	Pin	Signal	Designation
	1	24 V DC	Supply for electronics and inputs
	2	24 V DC	Load supply for valves/outputs
	3	0 V	Equipotential bonding
	4	0 V	Earth terminal and equipotential bonding, rated for 12 A

Power supply concept of the CPX terminal

Circuit diagram for M18 power supply/system supply (example)



The use of decentralised devices on the fieldbus – particularly with high protection for direct machine mounting – demands a flexible power supply concept.
The CPX terminal facilitates the connection of all voltages via one socket.

A distinction is made between supply for
- electronics and sensors/inputs
- valves
- actuators/outputs

Selectable connecting thread:
- M18
- 7/8"
- AIDA push-pull

Note

The CP interface connects the 0 V of the power supply for the electronics/inputs and the valves. To prevent overloads, the power must therefore be supplied using just one power supply module or using power supply units with a common earthed conductor.

Interlinking blocks

Many applications require segmenting of the voltage into zones. This is true in particular of the separate disconnection of connected actuators (solenoid coils/outputs).
The separation of voltages for valves and the realisation of different voltage segments for electrical outputs and sensors are supported by the different interlinking blocks of the CPX terminal:
- With system supply
- Without power supply
- With additional power supply for electrical outputs
- With additional power supply for valves

The supply voltages are supplied using a
- 4-pin M18 plug
- 4-pin 7/8" plug
- 5-pin 7/8" plug
- AIDA push-pull, 5-pin

Note

The max. current is limited to 12 A with the 7/8" system supply. When using a conventional pre-assembled cable, the max. current is limited to 8 A.

General limits

System supply

The system supply provides the internal voltage for the entire CPX system with
- max. 16 A for electronics and sensors/inputs
- max. 16 A for actuators/outputs and valves

CP interface

The CP interface and the CP modules connected to the CP interface get their operating voltage from the connection for electronics and sensors/inputs.

The operating voltage for the sensors/actuators connected to the CP modules is supplied from the voltage for valves. The CP interface supplies the connected CP modules with

The CP interface supplies the connected CP modules with
- max. 1.6 A per CP string

Diagnostics

General information

A comprehensive diagnostic function is available for each string.
The diagnostic information can either be detected via the LEDs on the module and then read out and evaluated via the controller software (non-fieldbus-specific) or displayed directly on the CPX terminal via the CPX-MMI and then evaluated and edited.

Diagnostics via LED

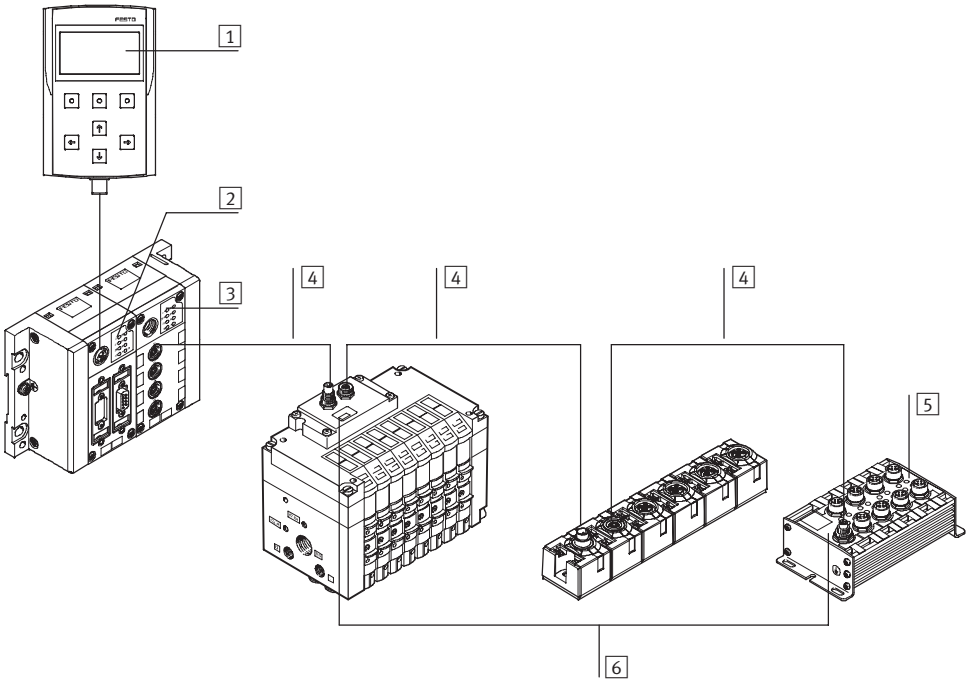
- Error in bus communication
- POWER, power supply display for internal electronics
- POWER V, load voltage display for valves
- 0 … 3, CP string allocation changed or interrupted

There are also bus-specific LED displays.

Diagnostics via control program/CPX-MMI

- Configuration error
- Bus error
- Operating voltage failure
- Falling below voltage tolerance (valves)
- Short circuit in sensor voltage supply
- Operating voltage failure at the output modules
- Short circuit/overload at the output modules
- Connection to one or more CP modules interrupted (valve terminal, input/output modules)

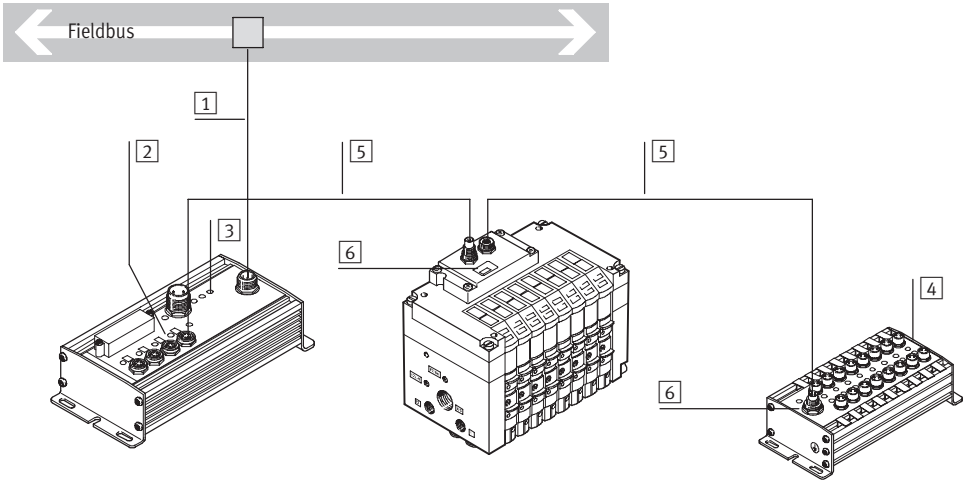
Diagnostics via CPX terminal



1 Diagnostics via controller/fieldbus node
2 Bus-specific LED
3 String diagnostics via LED on the CP interface
4 Diagnostics via CP string
5 Diagnostics via LED on CP module
6 Status display on the CP module

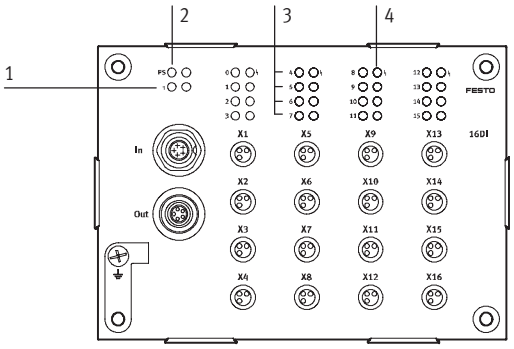
Diagnostics

Diagnostics via CP fieldbus node



1 Diagnostics via fieldbus
2 String diagnostics via LED on the fieldbus node
3 Bus-specific LED
4 Diagnostics via LED on the CP module
5 Diagnostics via CP string
6 Status display on the CP module

Diagnostic LEDs on the CP modules



1 Status LED for CP communication (PS, green)
2 Status LED (module) for short circuit/overload of sensor supply (red)
3 Status LEDs for inputs (status display, green)
4 Status LED (group, only with CP-E16-...-EL) for short circuit/overload of sensor supply (red)

In addition to the status display per module and per individual channel/input, the economical modules with 16 inputs additionally have a status display for a group of four inputs. The following inputs are combined into groups of four:

- 0 ... 3
- 4 ... 7
- 8 ... 11
- 12 ... 15

Parameterisation

Allocation of the addresses to the individual actuators/outputs or sensors/inputs connected to the CP modules is performed in accordance with the fieldbus node or CPX-FEC used (exception: Interbus node). Address allocation is performed in accordance with the following rules:

- One CP interface provides four strings with a total of 128 inputs and 128 output addresses.
- A used string occupies 32 inputs and 32 output addresses.
- The addresses are permanently allocated to the strings and CP modules in ascending order.
- Unused address space remains reserved for future extensions.

The CP interface checks the configuration of the connected modules each time the system is switched on and during operation. If a deviation from the saved configuration is detected, an appropriate message is output via the controller software and displayed via LED.
The configuration detected is stored by pressing the Save button (after the operating voltage is switched on at the CP interface).

The configuration is stored each time the CP interface is switched off and back on.
The option is provided of replacing a connected CP module with a module of identical design during operation. Removal of more than one module from the current configuration will be detected as an error; the address spaces of these modules will no longer be actuated.

This fieldbus node handles communication between the decentralised CP system and a higher-order master. The fieldbus node is a slave station on the fieldbus and represents the I/O data and diagnostic information of the connected CP modules on the network.

For the electrical peripherals, this module provides the separate electrical system supply for

- the electronics modules and sensor supply, and
- the load current of the valves.

The FB5 fieldbus node supports three different company-specific fieldbus protocols, based on a floating RS485 connection. The required protocol is selected by means of switch settings.

- Festo fieldbus
- ABB CS31
- Moeller SUCONET K

Application

Bus connection

The bus connection on the FB5 is established by means of a 9-pin Sub-D plug. In the case of operation on the fieldbus, the incoming control signals from the node via the fieldbus are permanently forwarded to the connected CP modules. The CP modules ensure that the programmed output signals are present or switch the relevant valves.

Note

Alternatively the bus connection can be established via a 2x M12 adapter plug (B-coded).

Implementation

The FB5 supports the digital input and output modules and the solenoid coils. It can service a total of 64 digital outputs, of which max. 4x 16 can include solenoid coils, and 64 digital inputs.

Note

Please observe the general guidelines on I/O addressing when assigning the outputs.

This fieldbus node handles communication between the decentralised CP system and a higher-order master. The fieldbus node is a slave station on the fieldbus and represents the I/O data and diagnostic information of the connected CP modules on the network.

For the electrical peripherals, this module provides the separate electrical system supply for
- the electronics modules and sensor supply, and
- the load current of the valves.

Application

Bus connection

The bus connection is established via two 9-pin M23 connections with a typical Interbus pin allocation.
The plug and socket are labelled with Remote IN and Remote OUT in accordance with the definition for the Interbus remote bus. Both bus cables are always routed to the fieldbus node and looped through in accordance with the ring structure of the Interbus.

The CP fieldbus node receives the data from the higher-order controller and forwards it to the connected CP valve terminals or electrical output modules. The signal status of the inputs is requested from the input modules and forwarded to the CP fieldbus nodes.

Implementation

The FB6 supports the digital input and output modules and the solenoid coils. It can service a total of 64 digital outputs, of which max. 64 can include solenoid coils, and 64 digital inputs.

Note

Please observe the general guidelines regarding addressing when assigning outputs.

This fieldbus node handles communication between the decentralised CP system and a higher-order master. The fieldbus node is a slave station on the fieldbus and represents the I/O data and diagnostic information of the connected CP modules on the network.

For the electrical peripherals, this module provides the separate electrical system supply for
- the electronics modules and sensor supply, and
- the load current of the valves.

The FB11 fieldbus node supports the CAN-based fieldbus protocol DeviceNet.
- DeviceNet

Application

Bus connection

The DeviceNet connection is established via a 5-pin M12 plug with pins that corresponds to the specific mini connector. A DeviceNet installation with a higher degree of protection is typically installed using main and branch lines that are connected via T-pieces.
Various manufacturers such as Turck, Lumberg and Rockwell offer finished cables and terminating resistors. The terminating resistors are attached to the two outermost T-pieces.
This installation technique keeps the bus closed while a bus station is being removed. Provides detailed diagnostic information about status bits for the master controller.

Implementation

The FB11 supports the digital input and output modules.
It can service a total of 64 digital inputs and 64 digital outputs, of which max. 64 can include solenoid coils.

Note

Please observe the general guidelines on I/O addressing when assigning the outputs.

This fieldbus node handles communication between the decentralised CP system and a higher-order master via Profibus DP. The fieldbus node is a slave station on the fieldbus and represents the I/O data and diagnostic information of the connected CP modules on the network.

For the electrical peripherals, this module provides the separate electrical system supply for
- the electronics modules and sensor supply, and
- the load current of the valves.

The status of the voltage supplies and the bus communication is indicated via the LEDs Power, Power Valves, String Error and Bus Error.
- Profibus-DP

Application

Bus connection

The bus connection is established via a 9-pin Sub-D socket with a typical Profibus allocation (to EN 50 170). The bus connector plug (with protection class IP65 from Festo or IP20 from other manufacturers) facilitates the connection of an incoming and an outgoing bus cable. An active bus terminal can be connected using the integrated DIL switch. The Sub-D interface is designed for the control of network components via a fibre optic cable connection and provides detailed diagnostic information for master detection.

Note

Alternatively the bus connection can be established via a 2x M12 adapter plug (B-coded).

Implementation

The FB13 supports digital input and output modules and solenoid coils.
64 digital outputs in total, of which max. 64 solenoid coils.
Max. 64 digital inputs for recording sensor signals.

Note

When assigning the electrical modules, please observe the configuration guidelines for valve terminals in relation to address allocation and the number of occupied module positions.

CPI installation system

Technical data – Input modules CP-E16

Function

Digital input modules facilitate the connection of proximity sensors or other 24 V DC sensors (inductive, capacitive, etc.).
M12 plugs with double allocation are separated using a DUO plug or DUO cable.

Application

- Input modules for 24 V DC sensor signals
- M8 and M12 plugs, single allocation connection technology with 16 connections, double allocation connection technology with 8 connections
- M12 plug, 5-pin
- The input statuses are indicated for each input signal on an assigned LED
- 24 V DC supply provided for all connected sensors
- Diagnostic LED for short circuit/undervoltage of sensor supply
- Diagnostic LED for short circuit/interruption of external sensor supply with CP-E-16-M8-Z

CPI installation system

Technical data – Input modules CP-E...-EL

Function

Digital input modules facilitate the connection of proximity sensors or other 24 V DC sensors (inductive, capacitive, etc.).
Plugs with double allocation are separated using a DUO plug or DUO cable.

Application

- Input modules for 24 V DC sensor signals
- M8 and M12 connection technology
- Display of the input statuses for each input signal via an assigned LED
- Operating voltage supply 24 V DC for all connected sensors
- Diagnostic LED for short circuit/overload of sensor supply
- Circumferential labelling with large, hinged inscription label
- Earthing plate and H-rail mounting already integrated

CPI installation system

Technical data – Input modules CP-E...-CL

Function

Digital input modules facilitate the connection of proximity sensors or other 24 V DC sensors (inductive, capacitive, etc.).
Plugs with double allocation are separated using a DUO plug or DUO cable.

Application

- Input modules for 24 V DC sensor signals
- M8 and M12 plug connection technology
- M12 input module, inputs with double allocation. M8 inputs with single allocation
- M12 plug, 5-pin
- The input statuses are indicated for each input signal on an assigned LED
- 24 V DC supply provided for all connected sensors
- Diagnostic LED for short circuit/undervoltage of sensor supply
- Modules support the CPI functionality (only in combination with the CPX CP interface)

General technical data					
Type			**CP-E08-M12-CL positive switching**	**CP-E08-M8-CL positive switching**	**CP-E16-KL-CL positive switching**
No. of inputs			8		16
Allocation of inputs			Double allocation	Single allocation	
Sensor connection type			4x M12, 5-pin	8x M8, 3-pin	Spring-loaded terminals or screw terminals
Power supply 24 V DC			From the bus node, basic unit, CP interface, etc.		
Intrinsic current consumption of electronics		[mA]	Typically 35 (inputs not connected)		
Input current at 24 V DC (from sensor)		[mA]	Typically 6		
Fuse protection for sensors and electronic module			Internal electronic short circuit protection		
Max. current consumption of sensor supply, residual current		[A]	Max. 0.8		
Nominal operating voltage for sensors			24		
Operating voltage range for sensors		[V DC]	18 ... 30		
Protection against polarity reversal			For logic and sensor supply		
Galvanic isolation			None		
Switching level	Signal 0	[V]	≤5		
	Signal 1	[V]	≥–11		
Input delay		[ms]	Typically 3		
Switching logic			PNP		
Input characteristic curve			To IEC 1131-2		
Connection to bus node			Via pre-assembled cables		
Diagnostics			Undervoltage		
			Short circuit/overload of sensor supply		

General technical data					
Type			CP-E08-M12-CL positive switching	CP-E08-M8-CL positive switching	CP-E16-KL-CL positive switching
Material			Polybutylene terephthalate		
Material note			Conforms to RoHS		
Dimensions (WxLxH)		[mm]	151 x 30 x 25		
Weight		[g]	165	190	145

Operating conditions					
Type			CP-E08-M12-CL	CP-E08-M8-CL	CP-E16-KL-CL
Protection class to EN 60529			IP65/IP67 (when fully plugged in or fitted with protective cap)		IP20
Ambient temperature	Operation	[°C]	–5 ... +50		
	Storage	[°C]	–20 ... +70		
Corrosion resistance class CRC[1)]			1		

1) Corrosion resistance class 1 to Festo standard 940 070
Components requiring low corrosion resistance. Transport and storage protection. Parts that do not have primarily decorative surface requirements, e.g. in internal areas that are not visible or behind covers.

CPI installation system

Technical data – Output modules CP-A08

Function

The electrical outputs activate actuators such as individual valves, lamps, signal equipment and many more.

Note

Optimum actuation of valves with M12 central plug.

Application

- Output module with 8 outputs 24 V DC
- M12 connection technology, with 4- or 5-pin sockets
- LED display of the switching status per channel
- Short circuit and overload detection
- Malfunction display by means of green LED

General technical data				
Type			CP-A08-M12-5POL positive switching	CP-A08N-M12 negative switching
No. of outputs			8

Weight	[g]	165

Operating conditions			
Protection class to EN 60529			IP65/IP67 (when fully plugged in or fitted with protective cap)
Ambient temperature	Operation	[°C]	–5 ... +50
	Storage	[°C]	–20 ... +70
Corrosion resistance class CRC[1)]			1

1) Corrosion resistance class 1 to Festo standard 940 070
Components requiring low corrosion resistance. Transport and storage protection. Parts that do not have primarily decorative surface requirements, e.g. in internal areas that are not visible or behind covers.

Certifications		
This product is certified for operation in the EX range as per EU-ATEX guideline		
ATEX category gas		II 3G
Ex-ignition protection type gas		Ex na II T5 X
ATEX category dust		II 3D
EX-ignition protection type dust		Ex tD A22 IP65 T80° C X
ATEX ambient temperature	[°C]	–5 ≤ Ta ≤ +50
Certification		c UL us recognized (OL)

Note

If device combinations are operated in potentially explosive areas, the lowest common zone, the temperature class as well as the ambient temperature of the individual devices determine the possible use of the complete module.

Connection and display components

CPI installation system

Technical data – MPA valve terminals

FESTO

Flow rate

MPA1: Up to 360 l/min
MPA2: Up to 700 l/min

Valve width

MPA1: 10 mm
MPA2: 21 mm

Voltage

24 V DC

CPI interface for communication between an MPA valve terminal and a CPI master. It activates an MPA valve terminal with up to 32 solenoid coils on max. 32 valve positions.

Note

With more than 16 MPA2 solenoid coils an additional electrical supply is absolutely necessary (after 4 electronic modules).
Note that without an additional electrical supply maximum 24 solenoid coils may be switched. If more than 24 MPA1 or 12 MPA2 solenoid coils are to be switched simultaneously, an additional supply must be inserted after the third electronic module.

General technical data			
Type			**MPA-CPI-VI**
CP interface, incoming			Plug M9, 5-pin
CP interface, outgoing			Socket M9, 5-pin
Max. no. of solenoid coils			32
LED display (product-specific)	PS		Common message regarding power supply
	PL		Power supply for valves
	Symbol		Module fault
Nominal operating voltage		[V DC]	24
Operating voltage range		[V DC]	24 ±25%
Power failure bridging	Logic side only	[ms]	10
Current consumption at nominal operating voltage	Load	[mA]	Dependent on valve type and number of valves
	Electronics	[mA]	Approx. 50 (plus current consumption of electronic modules)
Residual ripple		[Vss]	4
Materials			Die-cast aluminium, polyamide

CPI installation system

Order processing information

Configuration guidelines

The CPI system supports a certain number of modules per CP string depending on the type of the CP master and the CP modules connected.

CP masters and CP modules can be split into two different groups:

- With CPI functionality
- Without CPI functionality

CP modules with CPI functionality

CP modules with CPI functionality offer the following features:

- Incoming and outgoing CP interface
- Any arrangement of the modules within a CP string
- Max. 4 modules per CP string
- Max. 32 inputs and outputs can be connected to each string depending on the version

CP modules without CPI functionality

Sturdy CP modules offer the following features:

- CP valve terminals and CP output modules have an incoming and outgoing CP interface
- CP input modules only have an incoming CP interface and therefore can only be positioned at the end of a CP string
- All CP modules with CPI functionality can also be connected to CP masters without extended functionality

Information on using CP modules with and without CPI functionality

A mixture of CP modules with and without CPI functionality is possible. The following must be noted in this regard:

- Only one input module without CPI functionality is possible per CP string (at the end of a CP string)
- Only one CP valve terminal or output module without CPI functionality is possible per CP string (any point in the CP string)
- Free positions in the CP string can be filled by CP modules with CPI functionality (max. 4 modules)

Note

The cable length for any given string may not exceed 10 m.

Connecting cables are available in lengths of 0.25 m, 0.5 m, 2 m, 5 m and 8 m
➔ 91

The maximum number of inputs and outputs that can be connected is 32 each (sum of all CP modules on a CP string), regardless of the type of CP module (with or without CPI functionality).

Order processing

There is one way of placing an order for the electrical CPI installation system:

- Digitally using the valve terminal configurator

Please note that the CP strings must be allocated in ascending numerical order, i.e. starting with string 1, followed by string 2, etc. without omitting any numbers.

To correctly allocate a CP string, proceed as follows:

- First select a connecting cable of appropriate length.
- Then select an input/output module.
- Continue in this way until the string is fully allocated (max. 4 strings for CP modules with extended functionality).

The valve terminals are configured separately:

- CPV valve terminal CPV10/14/18-VI-FB-....
  ➔ Internet: type 10
- MPA valve terminals MPA-CPI-VI
  ➔ Internet: type 32
- CPV-SC valve terminals CPVSC1-AE16-CPI
  ➔ Internet: type 80
- CPA valve terminals CPA10/14-IFB-CP....
  ➔ Internet: type 12

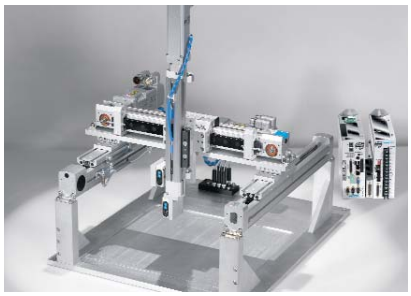
Product Range and Company Overview

A Complete Suite of Automation Services

Our experienced engineers provide complete support at every stage of your development process, including: conceptualization, analysis, engineering, design, assembly, documentation, validation, and production.

Custom Automation Components
Complete custom engineered solutions

Custom Control Cabinets
Comprehensive engineering support and on-site services



Complete Systems
Shipment, stocking and storage services

The Broadest Range of Automation Components

With a comprehensive line of more than 30,000 automation components, Festo is capable of solving the most complex automation requirements.

Electromechanical
Electromechanical actuators, motors, controllers & drives

Pneumatics
Pneumatic linear and rotary actuators, valves, and air supply

PLCs and I/O Devices
PLC's, operator interfaces, sensors and I/O devices

Supporting Advanced Automation... As No One Else Can!
Festo is a leading global manufacturer of pneumatic and electromechanical systems, components and controls for industrial automation, with more than 12,000 employees in 56 national headquarters serving more than 180 countries. For more than 80 years, Festo has continuously elevated the state of manufacturing with innovations and optimized motion control solutions that deliver higher performing, more profitable automated manufacturing and processing equipment. Our dedication to the advancement of automation extends beyond technology to the education and development of current and future automation and robotics designers with simulation tools, teaching programs, and on-site services.

Quality Assurance, ISO 9001 and ISO 14001 Certifications

Festo Corporation is committed to supply all Festo products and services that will meet or exceed our customers' requirements in product quality, delivery, customer service and satisfaction.

To meet this commitment, we strive to ensure a consistent, integrated, and systematic approach to management that will meet or exceed the requirements of the ISO 9001 standard for Quality Management and the ISO 14001 standard for Environmental Management.

Printed on recycled paper at New Horizon Graphic, Inc., FSC certified as an environmentally friendly printing plant.
