

Linear actuators DFPI

FESTO

Linear actuators DFPI

Key features

FESTO

General information

- Linear actuator for actuating process valves such as gate valves and shut-off valves, for example, in process automation systems
- Linear actuator with integrated displacement encoder (potentiometer)
- Product versions with integrated position controller and valve block available (DFPI-...-C1V-...). With this product version, the integrated position controller checks the position of the piston rod within the available stroke range. This actuator has a factory-defined safety position that is assumed if the operating voltage or the analogue setpoint value fails. Positions are specified via an analogue setpoint signal (4 ... 20 mA), for example via a master PLC/IPC or manually on-site via an external setpoint generator. The travel speed can be influenced using the integrated flow control screws
- With the P-connection type, the electrical and pneumatic connections are well protected from outside mechanical influences by a sturdy flanged socket
- With the ND2P-E-P variant, the displacement encoder supplies an analogue signal proportional to the displacement in the form of a voltage (voltage divider) that can then, for example, be processed further in an external position controller

Sturdy

- Sturdy and compact housing with high degree of IP protection
- Ideal for exterior use thanks to high corrosion resistance
- Product designs with integrated position controller have a pressure compensation component that prevents the formation of condensate inside the housing in the event of temperature fluctuations and in this way protects the internal electronics from damage

Simple

- Easy integration into an existing control architecture
- Commissioning of product designs with integrated position controller is as fast and easy as for product designs without integrated controller thanks to self-initialisation

Individual

- Product variants with and without position controller and valve block available
- Proximity sensors can be installed in the available slots if necessary for additional binary sensing of positions

Versatile

Suitable for use in:

- water processing systems
- sewage treatment systems
- service water systems
- process water systems
- silo and bulk goods systems

Linear actuators DFPI

Key features

FESTO

Variant ND2P-E-P

Piston Ø 100 ... 160

DFPI with integrated displacement encoder

Piston Ø 200 ... 320

Variant ND2P-C1V

Piston Ø 100 ... 160

DFPI with integrated displacement encoder, position controller and valve block

Piston Ø 200 ... 320

Variant ND2P-C1V-P

Piston Ø 100 ... 160

DFPI with integrated displacement encoder, position controller and valve block, with protected pneumatic connections

Piston Ø 200 ... 320

- - Note

Stroke length of the actuator

The stroke length of the actuator should generally at least correspond to the nominal diameter of the process valve so that the process valve can be fully opened and closed. The system tolerances can lead to

a greater stroke range than the specified nominal stroke range of the linear actuator. The adjustable rod clevis enables adjustment of the system.

 Note

Stroke length of the actuator

The stroke length of the actuator should generally at least correspond to the nominal diameter of the process valve so that the process valve can be fully opened and closed. The system tolerances can lead to a greater stroke range than the specified nominal stroke range of the linear actuator. During initialisation, the integrated position controller learns the stroke length used and ensures that the slide plate moves to the required positions in a controlled way – at most to the end positions learned during initialisation.

Product Range and Company Overview

A Complete Suite of Automation Services

Our experienced engineers provide complete support at every stage of your development process, including: conceptualization, analysis, engineering, design, assembly, documentation, validation, and production.

Custom Automation Components
Complete custom engineered solutions

Custom Control Cabinets
Comprehensive engineering support and on-site services

Complete Systems
Shipment, stocking and storage services

The Broadest Range of Automation Components

With a comprehensive line of more than 30,000 automation components, Festo is capable of solving the most complex automation requirements.

Electromechanical
Electromechanical actuators, motors, controllers & drives

Pneumatics
Pneumatic linear and rotary actuators, valves, and air supply

PLCs and I/O Devices
PLC's, operator interfaces, sensors and I/O devices

Supporting Advanced Automation... As No One Else Can!

Festo is a leading global manufacturer of pneumatic and electromechanical systems, components and controls for industrial automation, with more than 12,000 employees in 56 national headquarters serving more than 180 countries. For more than 80 years, Festo has continuously elevated the state of manufacturing with innovations and optimized motion control solutions that deliver higher performing, more profitable automated manufacturing and processing equipment. Our dedication to the advancement of automation extends beyond technology to the education and development of current and future automation and robotics designers with simulation tools, teaching programs, and on-site services.

Quality Assurance, ISO 9001 and ISO 14001 Certifications

Festo Corporation is committed to supply all Festo products and services that will meet or exceed our customers' requirements in product quality, delivery, customer service and satisfaction.

To meet this commitment, we strive to ensure a consistent, integrated, and systematic approach to management that will meet or exceed the requirements of the ISO 9001 standard for Quality Management and the ISO 14001 standard for Environmental Management.
