

- Compact Performance: maximum flow with minimum space requirement
- For use in potentially explosive areas
- Installation-saving control cabinet assembly
- QS push-in fittings for inch tubing
- Short tubing lengths, short cycle times
- Huge range of valve functions
- Integrated assembly and installation concept
- Pneumatic multiple connector plate
- 24-hour delivery service

## Valve terminals type 10 CPV10-EX-VI, Compact Performance, NPT

FESTO

Key features

### Innovative

- Cubic design for exceptional performance and low weight
- Sturdy
- Optimised for installation in the control cabinet
- Suitable for pilot control of process valves
- High flow rate with extremely compact design

### Versatile

- Up to sixteen 2/2- or 3/2-way valves per valve terminal thanks to two-fold function in each slice
- Flexible and cost-effective connection of 2 to 8 valve slices
- Highly flexible thanks to:
  - various pneumatic functions (valve variants)
  - different pressure ranges
- Separator plates for creating pressure zones
- Blanking plates for future expansion

### Reliable

- Manual valve overrides
- Protection class to IP65 in the control cabinet
- Intrinsically safe valve terminal design to ATEX Category 2 (Zone 1)
- Extremely robust thanks to the metal valve design
- Long service life

### Easy to mount

- Ready-to-install and tested unit
- Lower selection, ordering, installation and commissioning costs
- Secure mounting on wall or H-rail
- Pneumatic multiple connector plate
  - fast replacement of the valve manifold without the need to replace the existing tubing connections
- Valve assembly optimised for control cabinets

# Valve terminals type 10 CPV10-EX-VI, Compact Performance, NPT

FESTO

## Key features

### Main features

Simple electrical connections:

- Individual connection

Quick mounting:

- Directly using screws
- On an H-rail
- Via the pneumatic multiple connector plate

Robust metal thread or pre-assembled QS push-in fittings for imperial tube couplings

Inscription labels

Reliable operation:

Manual override, non-detenting, detenting or blocked

Comprehensive range of valve functions, pressure zone creation, blanking plates

Width  
– 10 mm

### Equipment options

#### Valve functions

- 5/2-way valve, single solenoid
- 5/2-way valve, double solenoid
- 2x 3/2-way valve, normally open
- 2x 3/2-way valve, normally closed
- 2x 3/2-way valve, 1x normally open, 1x closed
- 2x 3/2-way valve, normally closed, with integrated back pressure protection
- 5/3-way valve<sup>1)</sup>
- 2x 2/2-way valve, normally closed
- 2x 2/2-way valve, 1x normally open, 1x closed

#### Special features

##### Individual connection

- 2 ... 8 valve positions, max. 16 solenoid coils

##### Intrinsically safe

The valve terminal CPV10-EX-VI features an intrinsically safe design for use in potentially explosive areas to ATEX Category 2 (Zone 1)

##### Pneumatic multiple connector plate

Pneumatic multiple connector plate for wall opening facilitates installation in control cabinets, seal to IP65.

##### Operation

Actuation only via intrinsically safe circuit with individual valve connection.

<sup>1)</sup> Via function block, not in conjunction with pneumatic multiple connector plate.

FESTO

Key features

## Electrical connections

### Individual connection in explosion-proof design

The CPV10-EX-VI is a valve terminal featuring an intrinsically safe design for use in Zone 1 potentially explosive areas (ATEX Category 2 G).

Definition of intrinsically safe:  
Intrinsically safe means that the electrical outputs and solenoid coils

are designed so that no sparks or thermal effects will trigger ignition in explosive atmospheres. Each valve coil must be connected to an intrinsically safe circuit that complies with ignition protection type ia IIC or ib IIC.

Individual connection permits the selection of 2 to 16 solenoid coils (divided between two to eight valve slices, including in uneven stages).

## Range of applications

Many applications involve explosive gases or dust. Applications such as these call for equipment with increased explosion protection requirements (Category 2 corresponding to Zone 1). The possibility of sparking, for example when a solenoid coil is switched off, must be completely ruled out. There are different ways of doing this. Solenoid coils for this type of application are usually “intrinsically safe”. Intrinsically safe here means that no sparks or thermal effects can occur that would trigger ignition in an explosive atmosphere.

The valve terminal family CPV10 is already approved for explosion protection areas to ATEX. This approval is valid for Category 3. It corresponds to Zone 2 in which an explosive atmosphere either normally does not occur or occurs only briefly. The valve terminal CPV10-EX-VI extends this range for higher ATEX requirements:

- Approval for Category 2, Zone 1.

The intrinsically safe valve terminal features an integrated protective circuit that prevents ignition for gas, mist or vapour. Circuits for intrinsically safe solenoid coils are also designed so that only low voltage and power levels can occur. Hence, in this case the valve terminal is equipped with individually connected valves.  
The CPV10-EX-VI can only be operated in suitable intrinsically safe circuits.

In process engineering, valves for pilot control of process valves are frequently installed in a control cabinet. The pneumatic multiple connector plate type CPV10-VI-...-M7-C or -D for control cabinets simplifies the installation of the pneumatic connections. Instead of multiple bulkhead fittings and pipe connections, installation can be carried out with just a single through-hole in the cabinet wall. Protection class IP65 is achieved via a sealing ring suitable for closed control cabinet assembly. The pneumatic multiple connector plate facilitates operation of the valve terminal CPV10-EX-VI in a suitable control cabinet in Zones 1 and 21 (ATEX Category 2 GD).

Selection and development

### Valve terminal configurator

Online via: → [www.festo.com/us/engineering](http://www.festo.com/us/engineering)

The appropriate valve terminal can be chosen quickly and easily using the online catalogue. This includes an easy-to-use valve terminal configurator, which makes it much easier to find the right product.

The valve terminals are fully assembled according to your order specification and are individually tested. This reduces assembly and installation time to a minimum.

You order a valve terminal type 10 using the order code.

Ordering system for type 10

## What does ATEX mean?

Explosive atmospheres are a constant hazard in the chemical and petrochemical industries because of the processing techniques used. These explosive atmospheres are caused

by escaping gas, vapours and mist, for example. Explosive atmospheres can also be expected to occur in mills, silos and sugar and feed processing

plants because of the dust/oxygen mixtures that occur there. For this reason, electrical equipment in hazardous areas is subject to

a special directive, ATEX 95a. This directive was also extended to non-electrical equipment on July 1 2003.

## What does ATEX 95a stand for and what does it mean?

- ATEX is an acronym of the French expression "Atmosphère explosible".
- ATEX 95a refers to article 95a of the corresponding EU directive.
- ATEX 95a is a working title. for a project related to the **directive 94/9/EC**:
- **Directive 94/9/EC** stipulates the minimum safety requirements for equipment and protective systems to be operated in explosive atmospheres.
- It applies to all EU member states.
- It relates to both electrical and non-electrical equipment.

## What are the main amendments introduced by directive 94/9/EC?

- Non-electrical equipment such as cylinders, pneumatic valves, service units and accessories now fall within the scope of the directive.
- Equipment will be approved for specific categories. These categories are allocated zones in which the equipment can be operated.
- Each piece of equipment must be supplied with operating instructions and a conformity declaration.
- The manufacturer's quality system must meet specifications over and above those required under ISO 9001.
- The new equipment bears the explosion protection and CE marks.
- Dust explosion protection now also falls within the scope of this directive.
- It specifies general safety requirements.
- It applies to mining as well as all other hazardous areas.
- It applies to complete protective systems.

Explosion protection classes					
Gas zone	Dust zone	Frequency	Equipment group	Equipment category	Area of application
			I	M	Mining
				M1	
				M2	
			II		All non-mining areas of application
0		Constant, frequent, long-term	II	1G	Gas, mist, vapour
	20		II	1D	Dust
1		Occasionally	II	2G	Gas, mist, vapour
	21		II	2D	Dust
2		Seldom, short-term in the event of a fault	II	3G	Gas, mist, vapour
	22		II	3D	Dust

Feature

## CPV – The benefits at a glance

The CPV valve terminal is of unique design. It permits the flexible combination of pneumatic performance, electrical connection technologies and a wide range of mounting options. The pneumatic multiple connector plate supports space-saving installation in control cabinets. In many cases the valve terminal can be installed in the previously unused wall area of the control cabinet. There is no need to

connect the valves in the control cabinet. All tube couplings can also be laid externally. Instead of individual holes, the pneumatic multiple connector plate requires only one rectangular cutout. The generously sized flow ducts and powerful flat plate silencers ensure high flow rates. All valves are in the form of valve slices. They are optimised for flow performance and are also extremely

compact. Two functions per valve slice (e.g. 2x 3/2-way valves) mean that twice the component density can be achieved. This saves space and reduces costs.

The cubic design permits exceptional performance yet a comparatively low weight. The benefits of this design are obvious when the valve terminal is used on a moving installation. However, robustness must not be sacrificed in favour of compactness.

The connecting thread and mounting attachments are metallic. The manual override for the valves can be adapted for different operating situations. If, for example, a detenting manual override is required for setting-up mode, the manual override can be easily converted for that application in a way that rules out operational errors.

## The design principle

The cubic design provides a clearly assigned function on each side. Thus, for example, the electrical connection is mounted on the top.

The different combination options ensure the optimum solution for the task at hand.

- Compressed air supply connections on the left, right or underneath
- Pneumatic working ports and function blocks (vertical stacking) underneath

- Manual operation from the front
- Electrical connection surface on the top
- Mounting surface at the back or the front via a pneumatic multiple connector plate

Key features – Pneumatic components

Valves				
CPV valves are valves with integrated sub-base, i.e. in addition to the valve function they contain all of the pneumatic ducts for supply, exhaust and the working ports. The supply ducts are a central component of the	valve slices and allow a direct flow of air through the valve slices. This helps achieve maximum flow rates. All valves have a pneumatic pilot control for optimising performance. The valve function is based on a piston spool	system with a patented sealing principle that guarantees its suitability for a wide range of applications as well as a long service life.	The valve terminal is not suitable for vacuum operation.	

Valve function				
Code	Circuit symbol	Size	Description	
		10		
M		■	5/2-way valve, single solenoid • Pneumatic spring return • Piston spool valve	
J		■	5/2-way valve, double solenoid • Piston spool valve • The pneumatic switching position is retained in the de-energised state	
C		■	2x 3/2-way valve, single solenoid • Normally closed • Pneumatic spring return • Piston spool valve	
CY		■	2x 3/2-way valve, single solenoid • Normally closed • Pneumatic spring return • Piston spool valve • Integrated back pressure protection  <b>Note</b> If it is necessary to ensure that the back pressure flaps are closed securely in the event of a sudden drop in operating pressure or if the operating pressure is switched off, the valve terminal must be operated with external pilot air supply.	
N		■	2x 3/2-way valve, single solenoid • Normally open • Pneumatic spring return • Piston spool valve • The function of a 5/3-way valve with mid-position pressurised can be implemented with these valves with initial position open	
H		■	2x 3/2-way valve, single solenoid • Normal position 1x open (pilot control 12) 1x closed (pilot control 14) • Pneumatic spring return • Piston spool valve For optimised cylinder movement. Corresponds to valve function M with simultaneous actuation of both solenoid coils (5/2-way, single solenoid). Since the piston area on each side can be pressurised or exhausted separately, it means that the cylinder can move faster.

### Creating pressure zones

Different pressures at port 1 and 11 result in two pressure levels per valve. This means, for example, that a cylinder drive can be advanced using high pressure and retracted using low pressure to save energy.

The maximum number of pressure zones possible is determined by the combination of the following components:

- Use of a separator plate
- End plate pair type
- Valve slice type

You can divide the CPV valve terminal into 2 to 4 pressure zones by using separator plates.

Separator plates			
Code	Graphical symbol	Size	Note
		10	
T	Separator plate (for creating pressure zones), supply duct 1 separated  	■	A separator plate (code T) is used to separate the duct for the air supply (port 1 and 11) to provide two pressure zones. <ul style="list-style-type: none"> <li>• Not in first or last valve position</li> <li>• Not with compressed air supply A, B, C, D, U, V, W, X</li> </ul>
S	Separator plate (for creating pressure zones), supply duct 1 and exhaust 3/5 separated  	■	The separator plate (code S) separates the exhaust duct 3/5 as well as the supply duct 1 and 11. This plate should be used to prevent back pressure on neighbouring valve functions. <ul style="list-style-type: none"> <li>• Not in first or last valve position</li> <li>• Not with compressed air supply A, B, C, D, U, V, W, X (single-side compressed air supply)</li> </ul>
L	Vacant position (blanking plate)  	■	A vacant position is created using a blanking plate (code L, where a valve can be positioned at a later date).

FESTO

Key features – Pneumatic components

## Example: Creating pressure zones

CPV with separator plate T

With the CPV valve terminals up to four pressure zones can be implemented. The diagram shows an example of the configuration and connection of four pressure zones using separator plate code T – with external pilot air supply.

# Valve terminals type 10 CPV10-EX-VI, Compact Performance, NPT

Key features – Pneumatic components

FESTO

## Compressed air supply and venting

The two end plates which supply the valve slices with pressure and exhaust are a characteristic feature of a CPV valve terminal.

- Large duct cross sections ensure maximum flow rates even when multiple valves are switched in parallel

- Large flat plate silencers in the end plates
- Internal/external pilot air supply

Each individual valve is supplied with compressed air from two individual

ducts (supply ports 1/11) and exhausted via a large, integrated exhaust duct (exhaust 3/5). This design permits unique flexibility and functionality. It is the easiest way of

realising a number of pressure zones per terminal.  
The valve terminal is supplied via end plates, either on the left, on the right, or on both sides.

## Pilot air supply

### Internal pilot air supply

Internal pilot air supply can be selected if the supply pressure at pneumatic connection 1 is 3 ... 8 bar. With internal pilot air supply the branch is located in the left or right-hand end plate. There is no port 12/14.

### External pilot air supply

External pilot air supply is required if the supply pressure at pneumatic connection 1 is less than 3 bar or greater than 8 bar. In this case, pressure of 3 ... 8 bar is applied at

port 12/14.  
If a gradual pressure build-up in the system using a pressurised on-off valve is required, external pilot supply

air should be selected. There the control pressure applied during switch-on is already very high in this case.

## End plates

Example of an end plate:  
The figure shows a left-hand end plate with external pilot air supply.  
The exhaust ports 3/5 and 82/84 can be supplied with screwed connections or with silencers. An end plate for internal pilot air supply does not have

ports 12/14 and 11.  
The port 82/84 is always present and should be provided with a silencer.  
The port 12/14 is connected internally with port 1 on an end plate for internal pilot air supply.

Key features – Pneumatic components

## Pneumatic connection

The working ports are located directly in the valve slices. Threaded connections and Quick Star push-in fittings (QS) are available for different tubing sizes. The supply ports are located in the end plates or in the pneumatic multiple connector plate.

Push-in fittings are available fully assembled.

The following working ports can be selected:

- Threaded connections: Code C
  - Large push-in fittings: Code D
  - Small push-in fittings: Code E
- Connection sizes for the threaded and QS push-in fittings can be found in the table below.

## Pneumatic multiple connector plate

One-piece sub-bases which contain both the working ports and, optionally, the supply ports are available in combination with a pneumatic multiple connector plate. This enables the valve terminal as a

pneumatic “function” to be separated from the valve ports.

The pneumatic multiple connector plate enables different mounting options from wall mounting to direct passage through a cabinet wall.

Service-friendly and flexible connection technology thanks to the following:

- Common connection via the pneumatic multiple connector plate with all connections on one side
- The valve terminal can be disassembled/fitted using only

four screws, whereby the pneumatics remain fully connected

- Quick removal/fitting
- No errors when recommissioning as a result of incorrect connection of tubing

## CPV valve terminal

## Pneumatic multiple connector plate

Connection sizes		
Connection to ISO 5599	CPV10	Remarks
1/11 Working air	G $\frac{1}{8}$	Fitting in end plate or pneumatic multiple connector plate
2/4 Working port	M7	Connection in valve slice, connection for push-in fitting in brackets
3/5 Exhaust air via right-hand/left-hand end plate or pneumatic multiple connector plate	G $\frac{3}{8}$	
	G $\frac{1}{4}$	
12/14 Pilot air supply port	M5	
82/84 Exhaust air from left-hand/right-hand end plate or pneumatic multiple connector plate	M5	
	M7 (M5) <sup>1)</sup>	

1) With flanged pneumatic multiple connector plate.

## CPV valve terminal size 10 with valve extensions

### Function blocks

CPV10-BS-5/3G-M7

Valve kit 5/3G for creating a 5/3-way function, mid-position closed:  
The valve function “mid-position closed” is created using one valve slice with 2x 3/2-way valve, normally closed (valve function code C).  
The valve kit CPV10-BS-5/3G-M7 (which incorporates a double piloted

non-return function) is used for this. This valve kit is intended for applications with one working pressure level per valve slice, i.e. it must not be used in dual-pressure applications (where the pressure levels at port 1 and 11 are different).

### Additional functions for valve positions

These valve extensions (vertical stacking) can be used to add further pneumatic functions to CPV valve terminals size 10 and 14:

- Two one-way flow control valves for flow regulation directly at the valve terminal for
  - supply air flow control
  - exhaust air flow control
- The vacuum flow control module must be used with the vacuum generator with or without ejector pulse and provides a non-return function and adjustable ejector pulse.

#### Note

The additional functions cannot be used in the first or last valve position in combination with the pneumatic connector plate M, P and cannot be used in combination with the pneumatic multiple connector plate GQC, GQD.

CPV10-BS-2xGRZZ-M7

- 2x one-way flow control valve for supply air flow control
- Additional function code P

CPV10-BS-2xGRAZ-M7

- 2x one-way flow control valve for exhaust air flow control
- Additional function code Q

# Valve terminals type 10 CPV10-EX-VI, Compact Performance, NPT

FESTO

Key features – Assembly

## Mounting options

The valve terminals have holes for four mounting screws, the mounting side is the side with the pneumatic threaded connector. These holes are also used to mount the valve terminal on a pneumatic multiple connector plate.

There are other mounting options in addition to this method:

- H-rail mounting
- Wall mounting
- Wall mounting via flanged multiple connector plate

- On rear side via wall mounting
- On front side
- Mounting via through-hole in wall

The attachments are mounted with a screw and fixing bolt on the left-hand and right-hand end plates.

## Mounting for H-rail

for valve terminal CPV10:  
CPV10/14-VI-BG-NRH-35  
(mounting code H)

H-rail to EN 60715, not for accessories M, P, V (pneumatic multiple connector plate)

## Attachment for wall mounting

for valve terminal CPV10:  
CPV10/14-VI-BG-RWL-B  
(mounting code U)

## Attachment for individual connection and ET200X/ET200pro (included in the scope of delivery)

for valve terminal CPV10/14:  
CPV...-VI-BG-ET200X  
(mounting code X)

### Note

The valve terminal CPV10-EX-VI must not be operated on the Siemens Simatic ET 200X. The mounting kit should only be used for front mounting of the valve terminal.

## Through-hole in wall, for example on a machine

## Wall mounting via pneumatic multiple connector plate

# Valve terminals type 10 CPV10-EX-VI, Compact Performance, NPT

FESTO

Key features – Assembly

## Pneumatic multiple connector plate for wall/machine mounting

With flange, code P

1 Mounting holes

- Multiple connector plate projects past the end plates
- Through mounting holes (without thread) in the flange
- Two additional holes running laterally through the pneumatic multiple connector plate also enable rear mounting of the CPV valve terminal

Without flange, code M

1 Mounting holes

- Multiple connector plate fits flush with the end plates
- Mounting holes (with thread) for wall or foot mounting are on the connection side of the pneumatic multiple connector plate

## Pneumatic multiple connector plate for control cabinet assembly

With supply ports, code GQC

1 Mounting holes

- Multiple connector plate projects past the end plates
- Mounting holes (with thread) in the flange
- Multiple connector plate with seal

Without supply ports, code GQD

1 Mounting holes

- Multiple connector plate fits flush with the end plates
- The mounting holes (with thread) are on the connection side of the pneumatic multiple connector plate
- Multiple connector plate with seal

With supply ports, code GQE

1 Mounting holes

- For 10 mm
- Multiple connector plate projects past the end plates
- Mounting holes (with thread) in the flange
- Multiple connector plate with seal

### Note

The outer valve slices cannot be equipped with valve extensions (e.g. one-way flow control valve) when using the pneumatic multiple connector plate M or P.

CPV valve terminals with flat plate silencers are only suitable for wall mounting.

If the pneumatic multiple connector plate GQC, GQD or GQE is used, the following limitations apply:

- Generally no attachment of valve extensions
- Not in combination with H-rail mounting
- Not in combination with wall mounting

## Valve terminals type 10 CPV10-EX-VI, Compact Performance, NPT

FESTO

Key features – Display and operation

### Manual override tool

Three types of manual override are available:

- Non-detenting
- Detenting
- Blocked

A subsequent conversion of the manual override (MO) from non-detenting to detenting or blocked is possible at any time.

The locking clip on the valve must be removed to this end. This is only possible after the individual valve has been removed or the tie rod of the valve terminal has been released.

### Note

See the manual for instructions.

Code	Graphical symbol	Size 10	Note
N	Manual override, non-detenting 	■	In the “non-detenting” version, the blue slide is held via a locking clip. A pointed object (e.g. pen, etc.) can be used to activate the MO through the opening.
R	Manual override, detenting 	■	In the “detenting” version, the locking clip is removed and the manual override is activated by pushing the slide down. The non-detenting function can be re-established by re-installing the locking clip.
V	Manual override, blocked 	■	In the “blocked” version, detenting or non-detenting activation of the MO is prevented by means of a cover. Like the non-detenting locking clip, the cover can be added subsequently, but then remains on the valve.

FESTO

Key features – Electrical components

## Electrical connection

### Individual connection

The corresponding individual connecting cables are generally designed without an LED.

The CPV10-EX-VI must only be operated in suitable intrinsically safe circuits. A wide range of well-known manufacturers (list on request) offer

appropriate controllers, barriers or fieldbus circuits with intrinsically safe outputs.

2 ... 16 solenoid coils (divided between 2 ... 8 valve slices) can be selected, odd numbers also possible. The pneumatic multiple connector plate can only be used with even numbers.

### Note

The total maximum cable length of the electrical connecting cables per coil is 30 m. This value also applies when the valve terminal is installed in a control cabinet.

Instructions for use

**FESTO**

## Equipment

Operate system equipment with unlubricated compressed air if possible. Festo valves and cylinders are designed so that, if used as designated, they will not require additional lubrication and will still achieve a long service life. The quality of compressed air downstream of the compressor must correspond to that of unlubricated compressed air. If possible, do not operate all your system equipment with lubricated compressed air. The lubricators should, where possible, always be installed directly upstream of the actuator used.

Incorrect additional oil and too high an oil content in the compressed air reduce the service life of the valve terminal.  
Use Festo special oil OFSW-32 or the alternatives listed in the Festo catalogue (as specified in DIN 51 524-HLP32; basic oil viscosity 32 CST at 40 °C).

### Bio-oils

When using bio-oils (oils which are based on synthetic or native ester, e.g. rapeseed oil methyl ester), the maximum residual oil content of 0.1 mg/m<sup>3</sup> must not be exceeded (see ISO 8573-1 Class 2).

### Mineral oils

When using mineral oils (e.g. HLP oils to DIN 51 524, parts 1 to 3) or similar oils based on poly-alpha-olefins (PAO), the maximum residual oil content of 5 mg/m<sup>3</sup> must not be exceeded (see ISO 8573-1 Class 4). A higher residual oil content irrespective of the compressor oil cannot be permitted, as the basic lubricant would be flushed out over time.

## Product Range and Company Overview

### A Complete Suite of Automation Services

Our experienced engineers provide complete support at every stage of your development process, including: conceptualization, analysis, engineering, design, assembly, documentation, validation, and production.

**Custom Automation Components**  
Complete custom engineered solutions

**Custom Control Cabinets**  
Comprehensive engineering support and on-site services

**Complete Systems**  
Shipment, stocking and storage services

### The Broadest Range of Automation Components

With a comprehensive line of more than 30,000 automation components, Festo is capable of solving the most complex automation requirements.

**Electromechanical**  
Electromechanical actuators, motors, controllers & drives

**Pneumatics**  
Pneumatic linear and rotary actuators, valves, and air supply

**PLCs and I/O Devices**  
PLC's, operator interfaces, sensors and I/O devices

### Supporting Advanced Automation... As No One Else Can!

Festo is a leading global manufacturer of pneumatic and electromechanical systems, components and controls for industrial automation, with more than 12,000 employees in 56 national headquarters serving more than 180 countries. For more than 80 years, Festo has continuously elevated the state of manufacturing with innovations and optimized motion control solutions that deliver higher performing, more profitable automated manufacturing and processing equipment. Our dedication to the advancement of automation extends beyond technology to the education and development of current and future automation and robotics designers with simulation tools, teaching programs, and on-site services.

### Quality Assurance, ISO 9001 and ISO 14001 Certifications

Festo Corporation is committed to supply all Festo products and services that will meet or exceed our customers' requirements in product quality, delivery, customer service and satisfaction.

To meet this commitment, we strive to ensure a consistent, integrated, and systematic approach to management that will meet or exceed the requirements of the ISO 9001 standard for Quality Management and the ISO 14001 standard for Environmental Management.
