

Control block CPX-CEC

Control block CPX-CEC

Key features

FESTO

Application

Controller

The CoDeSys controllers are modern control systems for CPX terminals that enable programming with CoDeSys to IEC 61131-3.

Programming in a global language

CoDeSys provided by Festo offers a convenient user interface with the following functions:

- Integrated module libraries
- Library administrator for integrating additional libraries
- Visualisation editor

- Simulation mode
- Integrated project documentation
- Debugging functions for fault finding
- Configuration and parameterisation of the controller using the control configuration

Basic functions

The CoDeSys controllers offer the following basic functions:

- Programming with CoDeSys to IEC 61131-3
- Communication via Ethernet (Modbus/TCP, EasyIP, TCP/IP)
- Process visualisation using operator unit FED or OPC server
- Communication via fieldbus in combination with a fieldbus node in the CPX terminal
- Diagnostics and quick commissioning of CPX modules via handheld CPX-MMI

CPX-CEC-C1 offers

- All basic functions
- CANopen master for controlling 31 CANopen stations. Electric axes can be controlled in point-to-point mode

CPX-CEC-M1 offers

- All basic functions
- CANopen master for controlling up to eight electric axes (recommended) in interpolated mode (two of these axes with circular interpolation and six additionally with linear interpolation)
- SoftMotion function library for coordinated multi-axis movements

CPX-CEC offers

- All basic functions
- RS232 interface for operating external devices

Note

The SoftMotion functions are not available when the control block is operated as a CANopen master.

Note

When using external devices, data communication must be programmed by the user.

Bus connection

The CoDeSys controllers are remote controllers that can be connected to a higher-order PLC via the fieldbus nodes of the CPX terminal or via Ethernet, for example:

- PROFINET
- Ethernet/IP
- EtherCAT
- Profibus
- DeviceNet

Operating modes

- Stand-alone
- Remote controller on the fieldbus
- Remote controller on the Ethernet

System expansion

CANopen connects CPX-CEC with valve terminals and electric drive controllers from Festo:

- CPX, CPV
- CMMP-AS, CMMS-AS/-ST, etc.
- AS-interface gateway, wireless gateway

Ethernet connects CPX-CEC with additional controllers and operator units from Festo:

- CECX
- FED-50 to FED-5000
- FED-CEC
- Camera SBOx-Q

System expansion (examples)

CPX-CEC as a stand-alone or remote controller

CPX-CEC-C1 as a CANopen fieldbus master

Control block CPX-CEC

Key features

Advantages for users

Increased performance

Improved cycle times – more connectable actuators.
Compatibility with almost all control systems on the market is ensured via the CPX terminal.

The extensive CoDeSys function library provides diagnostics and condition monitoring options.

Reduced costs

For standardised pre-processing: reduces installation costs as an intelligent remote I/O terminal to IP65/IP67 directly at the machine. CPX-CEC is ideally adapted to CPX and

motion applications with up to 31 axes. We recommend operating the CPX-CEC-M1 with a maximum of eight axes.

Simple, yet efficient: decentralised structures

The modular I/O system with up to 512 I/Os and CAN master functionality (CPX-CEC) offers complete flexibility, whether for open-loop or closed-loop control.

Stand-alone for low-cost automation of manual workstations, for example, or remote control with pre-processing.

The only one in the world to IP65

The fully integrated automation platform for standard, proportional and servopneumatics, sensors and motion control to IP65.

Included: simple commissioning.

Classification of CPX-CEC in the portfolio for multi-axis controllers for electric drive technology

Embedded controller

The controller FED-CEC (CoDeSys) for insertion in the display and operator units from Festo facilitates compact solutions for small control tasks in combination with electric drive technology.

CPX-CEC (CoDeSys) permits the flexible connection of valve actuators and electric drives on the terminal – programmable in CoDeSys and can, if necessary, be directly installed at the machine to IP65. The ideal complement to the gateway module CPX-CM-HPP and the multi-axis interface CPX-CMXX.

Modular controller

The modular controllers complete the upper end of the range for actuating electric drives.
The CECX-X-C1 (CoDeSys) is the ideal expansion option for a control cabinet in combination with electric drive technology and general control technology.

The CECX-X-M1 (CoDeSys) executes advanced tasks such as cam disks, multi-axis function modules to PLCopen and simple NC functions up to 2.5D.
The robot controller CMXR provides interpolating control for different kinematic systems (e.g. Tripod kinematics) with up to six axes.

CPX-CEC in the electric drive world

Control block CPX-CEC

Technical data

FESTO

The CoDeSys controller is a modern control system for CPX terminals that enables programming with CoDeSys to IEC 61131-3.

- Easy actuation of valve terminal configurations with MPA, VTSA
- Connection to all fieldbuses as a remote controller and for preprocessing
- Actuation of electric drives as individual axes via CANopen (CPX-CEC-C1/-M1)
- Diagnostics with flexible monitoring options for pressure, flow rate, cylinder operating time, air consumption
- Early warnings and visualisation options
- Actuation of decentralised installation systems on the basis of CPI actuation of applications in proportional pneumatics
- Servopneumatic applications
- AS-interface actuation via gateway

General technical data			
Type	CPX-CEC-C1	CPX-CEC-M1	CPX-CEC
Protocol	CoDeSys level 2		
	EasyIP		
	Modbus TCP		
	TCP/IP		
CPU data	32 MB RAM		
	32 MB flash		
	400 MHz processor		
Control interface	CAN bus		–
Processing time	Approx. 200 µs/1k instruction		
Baud rate	10/100 bps to IEEE 802.3 (10BaseT) or 802.3u (100BaseTx)		
Programming software	CoDeSys provided by Festo		
Programming language	SFC, IL, FCH, LD and ST to IEC 61131-3		
	Additionally CFC		
Programming, operating language	German		
	English		
Programming, support for file handling	Yes		
Program memory	4 MB user program		
Flags	30 kB remanent memory		
	8 MB global data memory		
	CoDeSys variable concept		
Device-specific diagnostics	Diagnostic memory		
	Channel and module-oriented diagnostics		
	Undervoltage/short circuit of modules		
LED displays (bus-specific)	TP: Link/traffic		
LED displays (product-specific)	RUN: PLC status		
	STOP: PLC status		
	ERR: PLC runtime error		
	PS: Electronics supply, sensor supply		
	PL: Load supply		
	SF: System fault		
	M: Modify/forcing active		
Parameterisation	CoDeSys		
Configuration support	CoDeSys		
IP address setting	DHCP		
	Via CoDeSys		
	Via MMI		
Control elements	DIL switch for CAN termination		–
	Rotary switch for RUN/STOP

Connection and display components

CPX-CEC-C1/-M1

- 1 CPX-MMI connection
- 2 DIL switch
- 3 Fieldbus interface (plug, Sub-D, 9-pin)
- 4 Status LEDs, bus-specific and product-specific
- 5 RUN/STOP rotary switch
- 6 Ethernet interface (RJ45, socket, 8-pin)

CPX-CEC

- 1 CPX-MMI connection
- 2 DIL switch
- 3 RS232 interface (socket, Sub-D, 9-pin)
- 4 Status LEDs, bus-specific and product-specific
- 5 RUN/STOP rotary switch
- 6 Ethernet interface (RJ45, socket, 8-pin)

Pin allocation – Fieldbus interface (CPX-CEC-C1/-M1)

	Pin	Signal	Meaning
Sub-D plug			
	1	n.c.	Not connected
	2	CAN_L	CAN low
	3	CAN_GND	CAN ground
	4	n.c.	Not connected
	5	CAN_SHLD	Connection to functional earth (FE)
	6	CAN_GND	CAN ground (optional) ¹⁾
	7	CAN_H	CAN high
	8	n.c.	Not connected
	9	n.c.	Not connected
	Housing	Screened	Plug housing must be connected to FE

1) If a drive controller is connected to an external power supply, CAN ground (optional), pin 6, cannot be used on the CPX-CEC-C1/-M1.

Pin allocation – RS232 interface (CPX-CEC)

	Pin	Signal	Meaning
Sub-D socket			
	1	n.c.	Not connected
	2	RxD	Received data
	3	TxD	Transmitted data
	4	n.c.	Not connected
	5	GND	Data reference potential
	6	n.c.	Not connected
	7	n.c.	Not connected
	8	n.c.	Not connected
	9	n.c.	Not connected
	Screened	Screened	Connection to functional earth
