

Rotary indexing tables DHTG

FESTO

Rotary indexing tables DHTG

Key features

FESTO

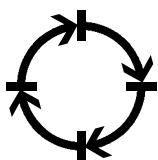

At a glance

- Sturdy mechanical system
- Simple planning and commissioning
- Number of stations: 2, 3, 4, 6, 8, 12, 24
- Integrated functions:
 - Overload protection
 - Sensor function
 - Cushioning adjustment
 - Speed setting
 - Changing the direction of rotation

Actuation options

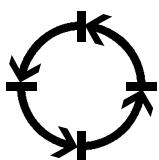

Clockwise

- Just one valve required

Anti-clockwise

- Just one valve required

Reciprocating motion

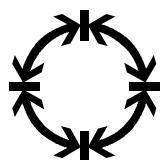

- Following conversion with reciprocating motion kit
- Two valves required

Variable actuation

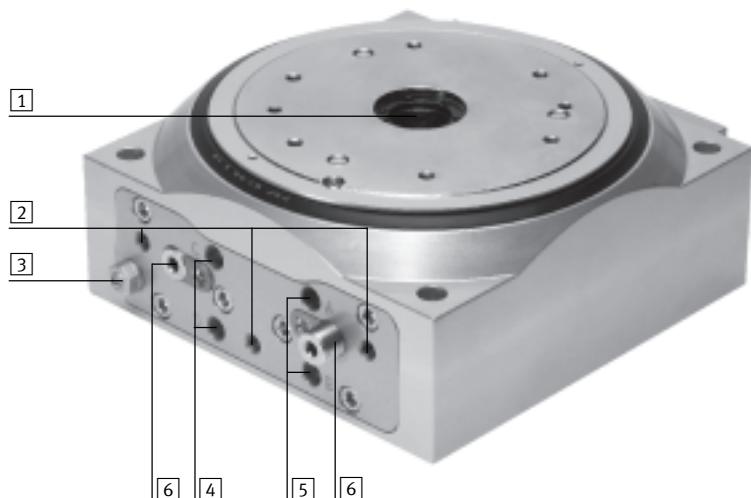

Left, right, reciprocating motion

- Following conversion with reciprocating motion kit
- Two valves required

The technology in detail

- [1] Through-hole for energy throughfeed
- [2] Thread for position sensing
- [3] One-way flow control valve for regulating speed
- [4] Supply port for reciprocating operation
- [5] Supply port for clockwise or anti-clockwise rotation
- [6] Adjusting screw for cushioning adjustment

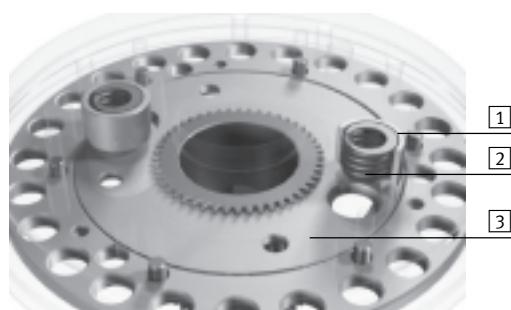

Overload protection

To prevent the rotary indexing table from being damaged by an excessive mass moment of inertia, e.g. during setting operation or in the event of shock absorber failure, sizes 140 and 220 feature overload protection. If the mass moment of inertia is too large, the securing pin is pressed against the spring force by the resulting radial force. It then slides forward on the toothed segment. This shift in

position between the index plate and toothed segment means that the securing pin can no longer engage and the rotary indexing table does not move. The table can be made ready for use again by turning it back.

- [1] Securing pin
- [2] Spring
- [3] Toothed segment

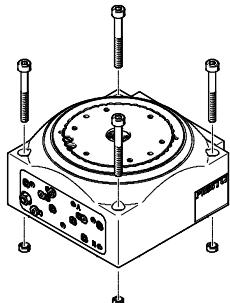

Rotary indexing tables DHTG

Key features

Mounting options

Direct mounting from above

Direct mounting from below

Typical applications

Basic rotary table

- Handling with minimum space requirement

Rotary table with rotary distributor

- For the transfer of compressed air and vacuum to the rotary table
- With 1 or 2 separate ducts

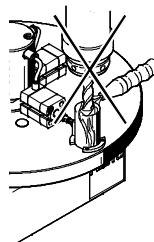

Rotary table with stationary centre section

- For the mounting of handling units or other devices in the centre of the rotary indexing table

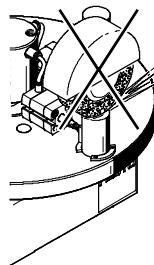

The rotary indexing tables are not designed for the following or similar sample applications:

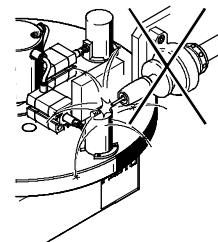

- Machining
- Aggressive media

- Grinding dust

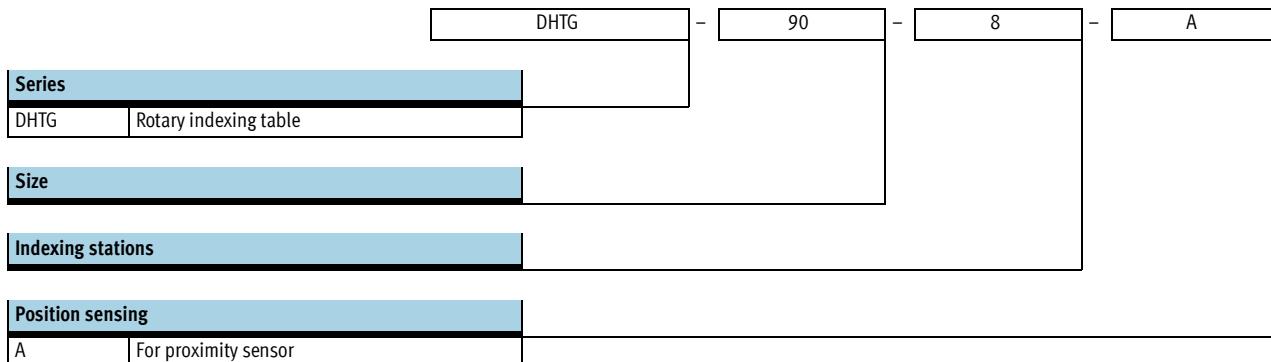

- Welding spatter

Peripherals overview

Variants and accessories

Type	Brief description	➔ Page/Internet
1 Unmachined plate, fixed DADG-UPF	For the mounting of handling units or other devices in the centre of the rotary indexing table	16
2 Adapter kit DADG-AK	For mounting the unmachined plate DADG-UPF on the rotary table	17
3 Unmachined plate, rotating DADG-UPT	Actuators can, depending on the application, be mounted on the unmachined rotating plate	16
4 Indexing conversion kit DADM-CK	The indexing steps can be adjusted at any time using the kit	20
5 Reciprocating motion kit DADM-TK	Allows conversion from movement in one direction to reciprocating movement	20
6 Proximity sensors SIEN	For sensing the switching position of the rotary indexing table	20
7 Rotary distributor GF	Distributes the compressed air conducted through the centre of the rotary indexing table to the actuators on the unmachined rotating plate. Cannot be used in combination with the fixed unmachined plate DADG-UPF	18
8 Adapter kit DADG-AK-...-G...	For mounting the rotary distributor on the rotary indexing table	19
9 Rotary indexing table DHTG	Flexible range of applications: Anti-clockwise and clockwise rotation or reciprocating motion	6

Rotary indexing tables DHTG

Technical data

FESTO

- Ø - Size
65, 90, 140, 220

Indexing stations
2, 3, 4, 6, 8, 12, 24

General technical data

Size	65	90	140	220
Pneumatic connection	M5		G1/8	
Design	Gear coupling Rack and pinion Force-guided motion sequence			
Mode of operation	Double-acting			
Type of mounting	Via through-holes and centring sleeve			
Mounting position	Any			
Cushioning	Adjustable shock absorber stroke, hard characteristic curve			
Indexing stations	2, 3, 4, 6, 8, 12, 24		3, 4, 6, 8, 12, 24	
Torque at 6 bar [Nm]	2.1	4.4	18.1	58.9
Parallelism of plate ¹⁾ [mm]	≤ 0.04			
Axial eccentricity of plate ²⁾ [mm]	≤ 0.02			
Concentricity of plate ³⁾ [mm]	≤ 0.02			
Repetition accuracy of swivel angle [°]	≤ 0.03			
Max. mass moment of inertia without flow control ⁴⁾ [kgm ²]	0.016	0.03	0.3	2.5
Cycle time without flow control	→ 8			
Position sensing	For inductive proximity sensors			
Product weight [kg]	2.0	4.5	10	24

- 1) Parallelism of the upper plate surface relative to the housing support
- 2) Measured on the upper surface of the plate at the plate edge relative to the housing support
- 3) Measured on the internal diameter of the plate relative to the housing
- 4) Operation with flow control can increase the mass moment of inertia by 50%. The service life of the shock absorber is reduced in this case. The mass moment of inertia depends on the number of stations and the switching frequency (→ 9)

- ⚡ - Note

The "clockwise" rotation of the table can be controlled via an internal flow control valve in combination with the reciprocating motion kit.

For "anti-clockwise" rotation, external actuation via an additional one-way flow control valve GRLA is needed.

Operating and environmental conditions

Operating medium	Compressed air in accordance with ISO 8573-1:2010 [7:4:4]
Note on operating/pilot medium	Operation with lubricated medium possible (in which case lubricated operation will always be required)
Operating pressure [bar]	4 ... 8
Ambient temperature [°C]	5 ... 60
Storage temperature [°C]	-20 ... +80
Protection class	IP54
Corrosion resistance class CRC ¹⁾	2

- 1) Corrosion resistance class 2 to Festo standard 940 070
Components subject to moderate corrosion stress. Externally visible parts with primarily decorative surface requirements which are in direct contact with a normal industrial environment or media such as coolants or lubricating agents

Calculation of the cycle time

The rotary indexing tables are equipped with a hydraulic shock absorber, which means that the max. frequency of the shock absorber must also be taken into account when calculating the cycle time.

The switching time comprises:
Switching time = Unlock, rotate, lock and return stroke of working piston.
The cycle time is calculated as follows:
Cycle time = Switching time + Processing time + Dwell time.

In the switching frequency graph, the max. achievable switching frequency is read in relation to the mass moment of inertia. From this the switching time can be calculated using $T = 60/f$. The processing time is calculated from the time required by

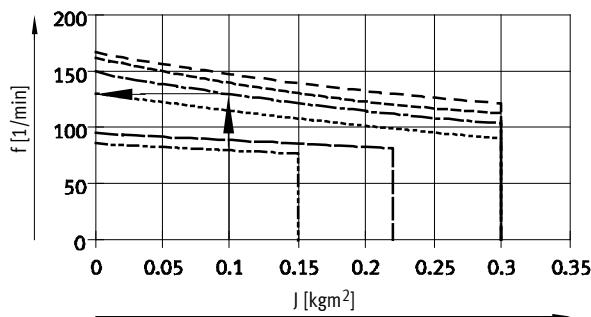

the respective customer application (e.g. time for component removal, press-in time, etc.). A dwell time may be necessary if the cycle time is shorter than the min. possible cycle time.

Calculation example

DHTG-140 with 8 stations and a mass moment of inertia of 0.1 kgm^2 .

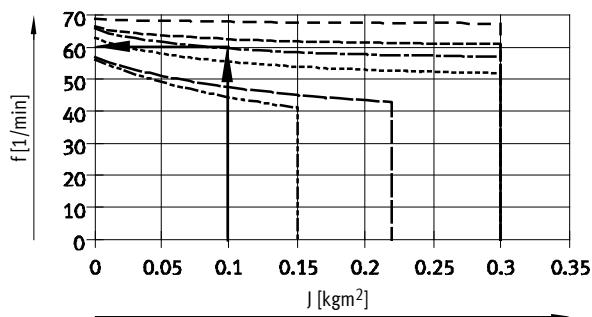

The customer application requires 300 ms per step for the insertion and removal of parts.

Switching frequency in rpm

$$T_{\text{switching time}} = \frac{1}{f} = \frac{60\text{s}}{130} = 0.461\text{s} = 461\text{ms}$$

Max. permissible cycle frequency

$$T_{\text{min. perm. cycle time}} = \frac{60\text{s}}{59} = 1.017\text{s} = 1017\text{ms}$$

Dwell time = Min. permissible cycle time – Switching time – Processing time

Dwell time = 1017 ms – 461 ms – 300 ms = 256 ms.

Given the fact that the switching time + processing time is smaller than the min. permissible cycle time, the rotary indexing table must stay in the end position

before the next step is performed. In other words, between the switching an additional dwell time of 256 ms must be allowed for in the control sequence.
