

Standard cylinders DSBC, to ISO 15552

FESTO

Standard cylinders DSBC, to ISO 15552

Key features

At a glance

DIN

- Standards-based cylinders to ISO 15552 (corresponds to the withdrawn standards ISO 6431, DIN ISO 6431, VDMA 24 562, NF E 49 003.1 and UNI 10290)

- Double-acting
- For contactless position sensing
- Optionally with protection against rotation
- Extensive range of accessories makes it possible to install the cylinder virtually anywhere

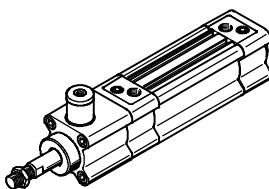

- Three types of cushioning available:
 - P cushioning: elastic cushioning rings/pads at both ends
 - PPS cushioning: pneumatic cushioning, self-adjusting at both ends
 - PPV cushioning: pneumatic cushioning, adjustable at both ends

- The variants can be configured individually thanks to the modular product system
- Excellent flexibility thanks to the wide range of variants

Variants from the modular product system

Symbol	Features	Description
	Q Square piston rod	Protection against rotation. For correctly oriented feeding
	U Uniform, slow movement	Suitable for slow stroke movements at a constant, judder-free speed over the full stroke of the cylinder. Seal contains silicone grease (not free of paint-wetting impairment substances)
	T Through piston rod	For working at both ends with the same force in the forward and return stroke, for attaching external stops
	F Female piston rod thread	-
	R3 High corrosion protection	All external cylinder surfaces comply with corrosion resistance class 3 to Festo standard 940 070. The piston rod is made from corrosion and acid-resistant steel
	T1 Heat-resistant seals	Temperature range 0 ... 120 °C
	T3 Low temperature	Temperature range -40 ... +80 °C
	T4 Heat-resistant seals	Temperature range 0 ... 150 °C (not PWIS-free)
	A3 Unlubricated operation	Cleaning processes degrease the piston rod. A special piston rod seal designed for unlubricated operation permits a longer service life compared to the standard seal
	...E Extended piston rod	-
	...L Extended male piston rod thread	-

Standard cylinder DSBC-...-C with clamping unit

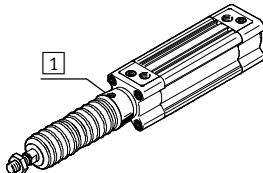

- Standard hole pattern
- Holding or clamping the piston rod in any position
- Piston rod can be held in position for long periods even with alternating loads, fluctuating operating pressure or leaks in the system

Additional measures are required for use in safety-related applications; in Europe, for example, the standards listed under the EC Machinery Directive must be observed.

Without additional measures in accordance with statutory minimum requirements, the product is not suitable for use in safety-related sections of control systems.

Longer service life with protective bellows kit DADB

The protective bellows kit is a leak-free system. To prevent unwanted media from being drawn in, the supply and exhaust air must be ducted via a venting hole in the connection part 1.

The kit protects the piston rod, seal and bearings against a wide variety of media, for example:

- Dust
- Chippings
- Oil
- Grease
- Fuel

Static holding force						
DSBC-...-C	600	1,000	1,400	2,000	5,000	5,000

Permissible impact velocity: $v_{zul.} = \sqrt{\frac{2 \times E_{zul.}}{m_{Eigen} + m_{Last}}}$

 $v_{perm.}$ Permissible impact velocity $E_{perm.}$ Maximum impact energy $m_{intrinsic}$ Moving load (drive) m_{load} Moving effective load

Maximum permissible load: $m_{Last} = \frac{2 \times E_{zul.}}{v^2} - m_{Eigen}$

Note

The specified holding force refers to a static load. If this value is exceeded, slippage may occur. Dynamic forces occurring during operation must not exceed the static holding force. The clamping unit is not backlash-free in the clamped condition if varying loads are applied to the piston rod.

Actuation:

The clamping unit may only be released if the forces at the piston have reached equilibrium. Otherwise, there is a risk of accidents due to sudden

movement of the piston rod. Blocking off the air supply at both ends (e.g. with a 5/3-way valve) does not provide any safety.

Operating and environmental conditions						
Piston Ø	32	40	50	63	80	100

Corrosion resistance class CRC						
DSBC-...		2 ¹⁾				
DSBC-...-R3		3 ²⁾				

- 1) Corrosion resistance class 2 according to Festo standard 940 070
Components subject to moderate corrosion stress. Externally visible parts with primarily decorative surface requirements which are in direct contact with a normal industrial environment or media such as coolants or lubricating agents.
- 2) Corrosion resistance class 3 according to Festo standard 940 070
Components subject to high corrosion stress. External visible parts in direct contact with industrial atmospheres or media such as solvents and cleaning agents, with a predominantly functional requirement for the surface.

Standard cylinders DSBC, to ISO 15552

Technical data

Max. lateral force F_q as a function of stroke length l

Basic design

Permissible torsional backlash with variant Q – With protection against rotation

Piston \varnothing	32	40	50	63	80	100
Torsional backlash [°]	± 0.65	± 0.6	± 0.45	± 0.45	± 0.45	± 0.45

Standard cylinders DSBC, to ISO 15552

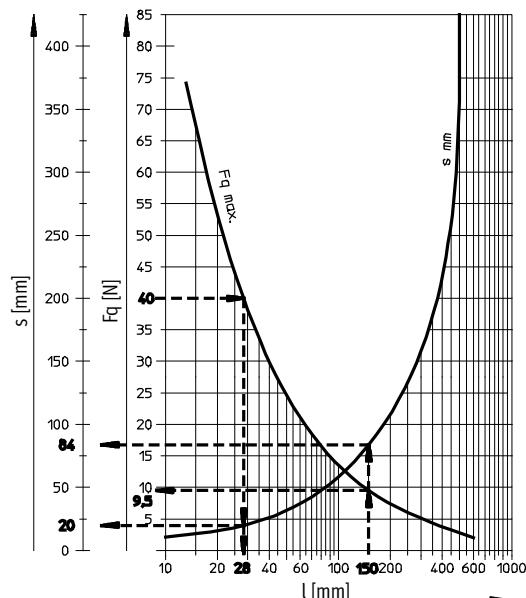

Technical data

Max. lateral force F_q as a function of stroke length l and lever arm s

Q – With protection against rotation

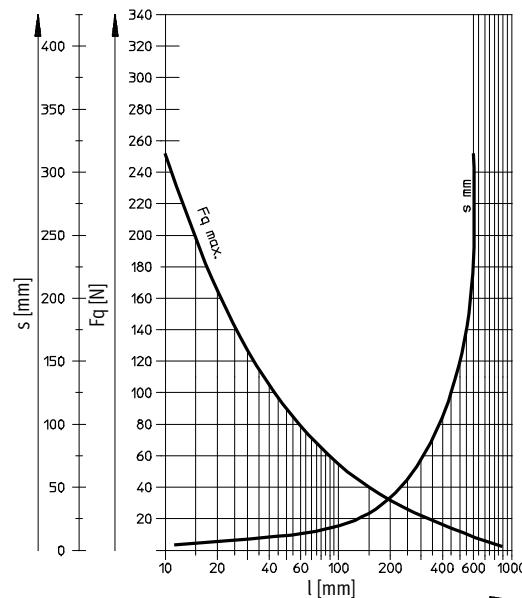

$\varnothing 32$

Max. torque = 800 Nmm/max. stroke = 300 mm

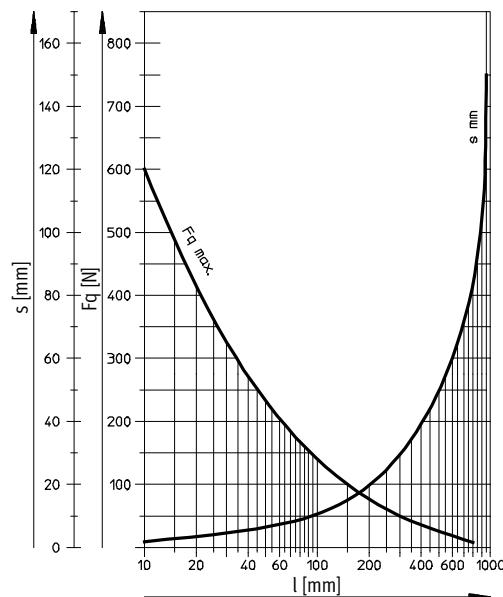

$\varnothing 40$

Max. torque = 1,100 Nmm/max. stroke = 400 mm

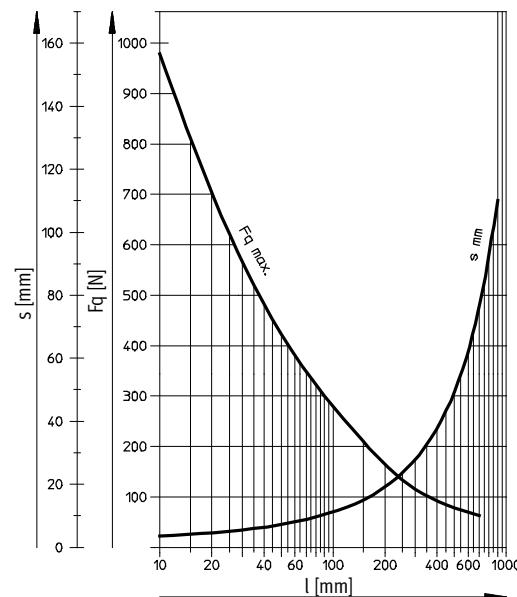

$\varnothing 50/63$

Max. torque = 1,500 Nmm/max. stroke = 500 mm

$\varnothing 80/100$

Max. torque = 3,000 Nmm/max. stroke = 600 mm

Examples for piston $\varnothing 32$ mm

Example 1:

Stroke length $l = 150$ mm

Result: Permissible

lateral force $F_q = 9.5$ N

Lever arm $s = 84$ mm

Example 2:

Lateral force $F_q = 40$ N

Result: Permissible

stroke length $l = 28$ mm

Lever arm $s = 20$ mm

Example 3:

Stroke length $l = 150$ mm

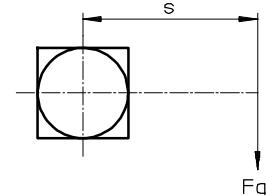

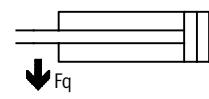

Lever arm $s = 100$ mm

$$F_q = \frac{\text{Max. torque } 800 \text{ Nmm}}{\text{Lever arm } 100 \text{ mm}}$$

$$= 8 \text{ N}$$

Result: Permissible

$$F_q = 8 \text{ N} < F_{q\max} = 9.5 \text{ N}$$

1) Corrosion resistance class 2 according to Festo standard 940 070

Components subject to moderate corrosion stress. Externally visible parts with primarily decorative surface requirements which are in direct contact with a normal industrial environment or media such as coolants or lubricating agents.

Corrosion resistance class 4 according to Festo standard 940 070

Components subject to very high corrosion stress. Parts used with aggressive media, e.g. in the food or chemical industry. These applications should be supported with special tests with the media if required.

Standard cylinders DSBC, to ISO 15552

Accessories

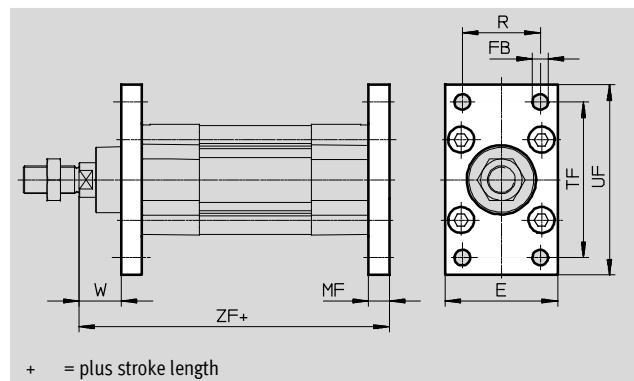

Flange mounting FNC/CRFNG

Accessories

Travel speed v as a function of tubing length l

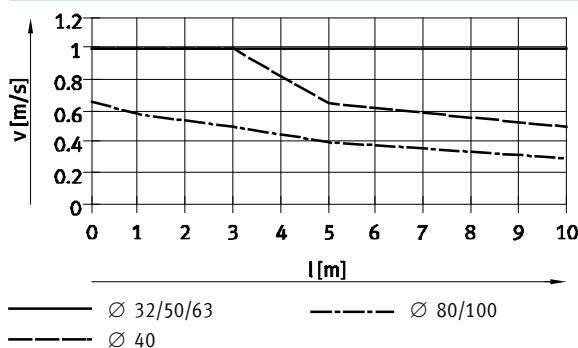

The protective bellows kit is a leak-free system. To prevent unwanted media from being drawn in, the supply and exhaust air must be ducted via a venting hole

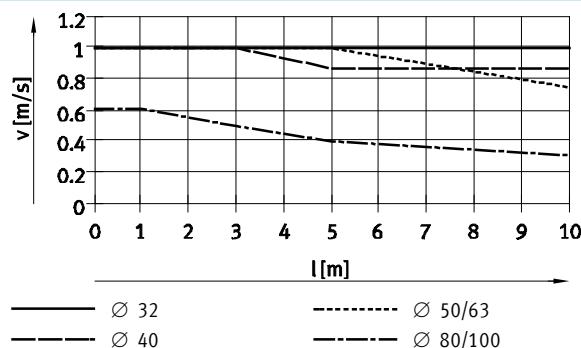

in the connection part 1. The pressure generated in the protective bellows kit by the positioning motion is primarily defined by the travel

speed and tubing length. The recommended tubing length based on the travel speed of the drive can be read from the graph.

Advance

Return

- Note

The push-in fittings opposite must be used for the venting hole. Silencers can be used as an alternative. This reduces the travel speed slightly.

1) The dimension corresponds to the E value (piston rod extension) of the drive

Standard cylinders DSBC, to ISO 15552

Accessories

Ordering data – Protective bellows kit

An extended piston rod (order code E) is required when using a protective bellows kit → Ordering data – Modular products.

The necessary dimension for order code E as a function of piston diameter and cylinder stroke as well as the corresponding protective bellows kit is indicated in the table below:

Order example:

Selected standard cylinder:

DSBC-32-320-PPV-A...

The dimension for the corresponding E value (see table):

112 mm

Complete type code for standard cylinder:

DSBC-32-320-PPV-A...-112E

The corresponding protective bellows kit:

DADB-V6-32-S301-350

Standard cylinders DSBC, to ISO 15552

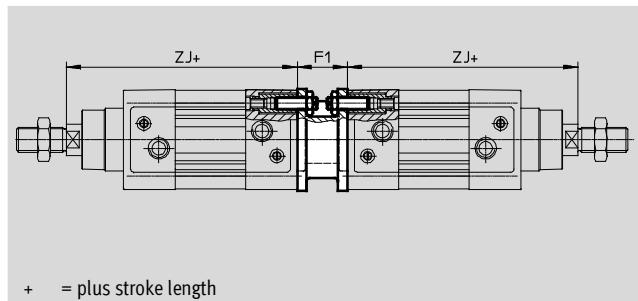

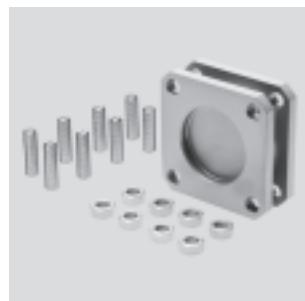

Accessories

FESTO

Multi-position kit DPNC

Material:

Flange: Wrought aluminium alloy
Threaded pins, hex nuts: Galvanised steel

 - Note

The maximum overall stroke length must not be exceeded when combining cylinders and multi-position kits.

100	38	187.5	1,000	1,190	174423	DPNC-100

Connecting two cylinders with identical piston Ø as a 3 or 4-position cylinder

A 3 or 4-position cylinder consists of two separate cylinders whose piston rods advance in opposing directions.

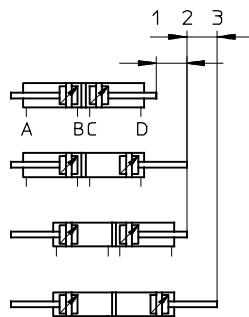

This means that depending on actuation and stroke division, this type of cylinder can assume up to four posi-

tions. In each case the cylinder is driven precisely against a stop. Note that when one end of the piston rod is

fixed, the cylinder barrel executes the movement. The cylinder's connections must be flexible.

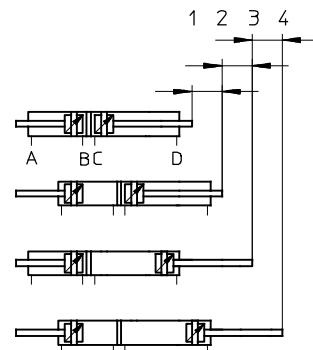

To achieve 3 positions

Two cylinders with identical stroke length must be connected together.

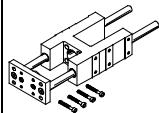

To achieve 4 positions

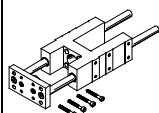

Two cylinders with different stroke lengths must be connected together.

Standard cylinders DSBC, to ISO 15552
