

Passive guide axes EGC-FA, without drive

# Passive guide axes EGC-FA, without drive

Key features

## At a glance

- Driveless linear guide unit with guide and freely movable slide
- Passive guide axes are designed to increase force and torque in multi-axis applications
- Higher torsional resistance
- Reduced vibrations with dynamic loads
- Drive axes and passive guide axes can be arranged adjacent to or above one another

## System product for handling and assembly technology

System components and accessories			
	Brief description	→ Page/Internet	
1	Axes	Wide range of combinations possible within handling and assembly technology	axis
2	Guide axes	For increasing force and torque in multi-axis applications	guide axis
3	Drives	Wide range of combinations possible within handling and assembly technology	drive
4	Motors	Servo and stepper motors, with or without gearing	motor
5	Grippers	Wide range of variations possible within handling and assembly technology	gripper
6	Adapters	For drive/drive and drive/gripper connections	adapter kit

## Passive guide axes EGC-FA, without drive

Key features

### Slide variants

Standard slide

Additional slide

### Guide options

Protected version

- The protected guide cleans the guide rail and protects the recirculating ball bearing guide with the aid of an additional wiper

With central lubrication

- The lubrication adapter enables the guide to be permanently lubricated using semi or fully automatic relubrication devices
- The adapters are suitable for oils and greases
- Both lubrication adapters must be connected

### Guide axes and the corresponding drives

Passive guide axis DGC-FA

- Can be combined with:
  - Linear drive DGC-KF
- For size 8 ... 63
- Load capacity to max. 6,890 N or 380 Nm

Passive guide axis EGC-FA

- Can be combined with:
  - Toothed belt axis EGC-TB
  - Spindle axis EGC-BS
- For size 70 ... 185
- Load capacity to max. 15,200 N or 1,820 Nm

Passive guide axis FDG-ZR-RF

- Can be combined with:
  - Toothed belt axis DGE-ZR-RF
- For size 25 ... 63
- Load capacity to max. 1,500 N or 600 Nm

Passive guide axis FDG-P/-ZR/-SP

- Can be combined with:
  - Linear drive DGPL
  - Toothed belt axis DGE-ZR-KF
  - Spindle axis DGE-SP-KF
- For size 18 ... 63
- Load capacity to max. 14,050 N or 1,820 Nm

Note on materials	
RoHS-compliant	
Contains PWIS (paint-wetting impairment substances)	

# Passive guide axes EGC-FA, without drive

Technical data

## Characteristic load values

The indicated forces and torques refer to the slide surface. The point of application of force is the point where the centre of the guide and the longitudinal centre of the slide intersect.

These values must not be exceeded during dynamic operation. Special attention must be paid to the cushioning phase.

If the axis is subjected to more than two of the indicated forces and torques simultaneously, the following equation must be met in addition to the indicated maximum loads:

Calculating the load comparison factor:

$$f_v = \frac{|F_{y,dyn}|}{F_{y,max}} + \frac{|F_{z,dyn}|}{F_{z,max}} + \frac{|M_{x,dyn}|}{M_{x,max}} + \frac{|M_{y,dyn}|}{M_{y,max}} + \frac{|M_{z,dyn}|}{M_{z,max}}$$

## Permissible forces and torques

Size		70	80	120	185
F <sub>y,max.</sub>	[N]	1,850	3,050	6,890	15,200
F <sub>z,max.</sub>	[N]	1,850	3,050	6,890	15,200
M <sub>x,max.</sub>	[Nm]	16	36	144	529
M <sub>y,max.</sub>	GK/GP [Nm]	51	97	380	1,157
M <sub>z,max.</sub>	GK/GP [Nm]	51	97	380	1,157

## Service life

The service life of the guide depends on the load. To provide a rough indication of the service life of the guide, the

graph below plots the load comparison factor  $f_v$  against the service life.

These values are only theoretical. Consultation with your local contact person at Festo is mandatory for load

comparison factors  $f_v$  greater than 1.5.

## Load comparison factor $f_v$ as a function of service life

Example:

A user wants to move an X kg load. Using the above formula gives a value of 1.5 for the load comparison factor. According to the graph, the guide would have a service life of

approx. 1,500 km. Reducing the acceleration reduces the Mz and My values. A load comparison factor of 1 now gives a service life of 5,000 km.

- Note

PositioningDrives  
sizing software  
www.festo.com

The workload for a service life of 5,000 km can be calculated with the help of the sizing software.

$f_v > 1.5$  are only theoretical comparison values for the recirculating ball bearing guide.

# Passive guide axes EGC-FA, without drive

Technical data

## Stroke reserve

Stroke length	Stroke reserve		
The selected stroke corresponds in principle to the required working stroke. The variant GK does not have a wiper seal on the guide. This variant therefore additionally has a safety distance between the drive cap and slide that is not designated as part of the working stroke.	A safety distance (similar to GK) between the drive cap and slide can be defined for the variants GP and GK-C using the modular product system via the "stroke reserve" feature. With the variant GK, the stroke reserve and safety distance are added for each end position.	<ul style="list-style-type: none"> <li>The stroke reserve length can be freely selected</li> <li>The sum of the stroke length and 2x stroke reserve must not exceed the maximum working stroke</li> </ul>	<b>Example:</b> EGC-70-500-FA-20H-... Working stroke = 500 mm 2x stroke reserve = 40 mm Total length = 540 mm (540 mm = 500 mm + 2x 20 mm)

Size	70	80	120	185
L9 = safety distance with GK [mm] (per end position)	10.5	13	18	21

## Working stroke reduction

With standard slide GK/GP with additional slide K

- With a guide axis with additional slide, the working stroke is reduced by the length of the additional slide and the distance between both slides
- With the variant GP, the additional slide is also protected
- If the variant GK-C is ordered, the additional slide is also supplied with lubrication adapters

L16 = Slide length	L18 = Distance between both slides	<b>Example:</b> Type EGC-70-500-FA-...-GK-1K Working stroke without additional slide = 500 mm L18 = 20 mm L16, L17 = 100 mm	Working stroke with additional slide = 380 mm (500 mm - 20 mm - 100 mm)
L17 = Additional slide length	1 Additional slide		

## Dimensions – Additional slide

Size	70		80		120		185	
	GK	GP	GK	GP or GK-C	GK	GP or GK-C	GK	GK-C
Length L17 [mm]	100	121	120	146	200	236	280	322
Min. distance between the slides L18 [mm]	-	21	-	26	-	36	-	42

## Working stroke reduction per side

With integrated emergency buffer NPE/shock absorber YSRW with shock absorber retainer KYE

- With a guide axis with emergency buffer, the working stroke is reduced by the total dimension of the emergency buffer/shock absorber and shock absorber retainer
- The rubber buffer in the cap must be removed
- Shock absorbers must not be used in combination with GK-C

Size	70	80	120	185
With emergency buffer [mm]	43	68	98	133
With shock absorber [mm]	42	63	84	107

# Passive guide axes EGC-FA, without drive

Technical data

## 2nd moment of area

Size	70	80	120	185
$I_y$ [mm <sup>4</sup> ]	$3.95 \times 10^5$	$8.44 \times 10^5$	$4.62 \times 10^6$	$2.34 \times 10^7$
$I_z$ [mm <sup>4</sup> ]	$5.77 \times 10^5$	$1.16 \times 10^6$	$5.65 \times 10^6$	$2.74 \times 10^7$

## Maximum permissible support span L (without profile mounting) as a function of force F

In order to limit deflection in the case of large strokes, the axis may need to be supported.

The following graphs can be used to determine the maximum permissible support span  $l$  as a function of force  $F$  acting on the axis. The deflection is  $f = 0.5$  mm.

Force  $F_y$

Force  $F_z$

- EGC-70
- EGC-80
- EGC-120
- EGC-185

## Recommended deflection limits

Adherence to the following deflection limits is recommended so as not to impair the functional performance of the

axes. Greater deformation can result in increased friction, greater wear and reduced service life.

Size	Dyn. deflection (load moving)	Stat. deflection (stationary load)
70 ... 185	0.05% of the axis length, max. 0.5 mm	0.1% of the axis length

# Passive guide axes EGC-FA, without drive

Accessories

**Shock absorber retainer KYE**  
 Emergency buffer NPE → 26  
 Shock absorber YSRW → 26  
 (order code A or C)

Material:  
 Anodised aluminium  
 RoHS-compliant

Cannot be used in combination with  
 the variant GP or GK-C.

**Switch lug SF-EGC-1**  
 for sensing using proximity sensor  
 SIES-8M  
 (order code X or Z)

Material:  
 Galvanised steel  
 RoHS-compliant

# Passive guide axes EGC-FA, without drive

Accessories

### Switch lug SF-EGC-2

for sensing using proximity sensor  
SIEN-M8B (order code O, P, W or R) or  
SIES-8M (order code X or Z)

Material:

Galvanised steel  
RoHS-compliant

### Sensor bracket HWS-EGC

for proximity sensor SIEN-M8B  
(order code O, P, W or R)

Material:

Galvanised steel  
RoHS-compliant
