

Passive guide axes ELFR, without drive

FESTO

Passive guide axes ELFR, without drive

Key features

FESTO

At a glance

- Driveless linear guide units with guide and freely movable slide
- Passive guide axes are designed to increase force and torque in multi-axis applications
- Higher torsional resistance
- Reduced vibrations with dynamic loads
- Drive axes and passive guide axes can be arranged adjacent to or above one another
- Plain-bearing guide
 - For small loads
 - Restricted operating behaviour with torque load
 - Guide backlash = 0.05 mm (on delivery)
- Recirculating ball bearing guide
 - For medium loads
 - Very good operating behaviour with torque load
 - Backlash-free guide (preloaded guide elements)

Associated drive axis

Toothed belt axis ELGR

- For size 35, 45, 55
- Load capacity up to max. 300 N or 124 Nm
- Max. feed force 350 N

System product for handling and assembly technology

System components and accessories

	Brief description	→ Page/Internet
1 Axes	Wide range of combinations possible within handling and assembly technology	axis
2 Guide axes	For increasing force and torque in multi-axis applications	guide axis
3 Drives	Wide range of combinations possible within handling and assembly technology	drive
4 Motors	Servo and stepper motors, with or without gear unit	motor
5 Grippers	Wide range of variations possible within handling and assembly technology	gripper
6 Adapters	For drive/drive and drive/gripper connections	adapter kit

Peripherals overview

FESTO

Variants and accessories		
Type	Brief description	→ Page/Internet
1 Slot cover NC	For protecting against ingress of dirt	13
2 Centring sleeve ZBH	- For centring loads and attachments on the slide 2 centring sleeves included in the scope of delivery of the axis	13
3 Profile mounting MA	For mounting the axis on the bearing cap	12
4 Slot nut NM	For mounting attachments	13
5 Switch lug SA, SB	For sensing the slide position	12
6 Sensor bracket SA, SB	Adapter for mounting the inductive proximity sensors on the axis	12
7 Proximity sensor, T-slot SA, SB	- Inductive proximity sensor, for T-slot - The scope of delivery with the order code SA, SB includes 1 switch lug and 1 sensor bracket	13
- Connecting cable NEBU	For proximity sensors (order code SA and SB)	13

2	Guide rods	Steel
3	Slide, profile	Anodised wrought aluminium alloy
Note on materials		RoHS-compliant
		Contains PWIS (paint wetting impairment substances)

Passive guide axes ELFR, without drive

Technical data

Characteristic load values

The indicated forces and torques refer to the centre of the guide. The point of application of force is the point where the centre of the guide and the longitudinal centre of the slide intersect.

These values must not be exceeded during dynamic operation. Special attention must be paid to the cushioning phase.

If the axis is subjected to more than two of the indicated forces and torques simultaneously, the following equation must be satisfied in addition to the indicated maximum loads:

Calculating the load comparison factor:

$$f_v = \frac{|F_{y,dyn}|}{F_{y,max.}} + \frac{|F_{z,dyn}|}{F_{z,max.}} + \frac{|M_{x,dyn}|}{M_{x,max.}} + \frac{|M_{y,dyn}|}{M_{y,max.}} + \frac{|M_{z,dyn}|}{M_{z,max.}} \leq 1$$

Permissible forces and torques for a service life of 5,000 km							
Guide		Plain-bearing guide			Recirculating ball bearing guide		
Size		35	45	55	35	45	55
$F_{y,max.}, F_{z,max.}$	[N]	50	100	300	50	100	300
Standard slide							
$M_{x,max.}$	[Nm]	1	2.5	5	2.5	5	15
$M_{y,max.}$	[Nm]	4	8	16	8	16	48
$M_{z,max.}$	[Nm]	4	8	16	8	16	48
Long slide							
$M_{x,max.}$	[Nm]	1	2.5	5	2.5	5	15
$M_{y,max.}$	[Nm]	10	20	40	20	40	124
$M_{z,max.}$	[Nm]	10	20	40	20	40	124

Service life

The service life of the guide depends on the load. To provide a rough indication of the service life of the guide, the

graph below plots the load comparison factor f_v against the service life.

These values are only theoretical. Consultation with your local contact person at Festo is mandatory for load

comparison factors f_v greater than 1.5.

Load comparison factor f_v as a function of service life

Example:

A user wants to move an X kg load. Using the above formula gives a value of 1.5 for the load comparison factor f_v . According to the graph, the guide would have a service life of

approx. 1,500 km. Reducing the acceleration reduces the M_z and M_y values. A load comparison factor of 1 now gives a service life of 5,000 km.

Passive guide axes ELFR, without drive

Technical data

FESTO

Min. nominal stroke

With standard slide or long slide L with additional slide ZR/ZL/ZB

Size	35			45			55		
Variant	-/L	ZR/ZL	ZB	-/L	ZR/ZL	ZB	-/L	ZR/ZL	ZB
Min. nominal stroke [mm]	50	126	202	50	146	242	50	166	282

Stroke reserve

L18 = Nominal stroke

L19 = Stroke reserve

- The stroke reserve is a safety distance that can be available on both sides of the axis in addition to the nominal stroke
- The sum of the nominal stroke and 2x stroke reserve must not exceed the maximum working stroke
- The stroke reserve length can be freely selected
- The stroke reserve is defined via the "stroke reserve" attribute in the modular product system

Example:

Type ELFR-45-500-20H-...

Nominal stroke = 500 mm

2x stroke reserve = 40 mm

Working stroke = 540 mm

(540 mm = 500 mm + 2x 20 mm)

Working stroke reduction

With standard slide or long slide L with additional slide ZR/ZL/ZB

L7 = Slide length

L16 = Distance between both slides

L17 = Additional slide length

- With a toothed belt axis with additional slide, the working stroke is reduced by the length of the additional slide and the distance between both slides
- If the long slide L variant is ordered, the additional slide is not extended

Example:

Type ELFR-35-500-...-ZR

Working stroke = 500 mm

L16 = 10 mm

L7, L17 = 76 mm

Working stroke with

additional slide = 414 mm

(500 mm - 10 mm - 76 mm)

Dimensions – Additional slide

Size	35	45	55
Length L17 [mm]	76	96	116
Distance between the slides L16 [mm]	≥ 0		

2nd moment of area

Size	35	45	55
I _y [mm ⁴]	3.77x10 ³	1.57x10 ⁴	3.83x10 ⁴
I _z [mm ⁴]	1.89x10 ⁵	8.08x10 ⁵	1.85x10 ⁶

Recommended deflection limits

Adherence to a maximum deflection of 0.5 mm is recommended so as not to impair the functional performance of

the axes. Greater deformation can result in increased friction, greater wear and reduced service life.
