

Air gap sensors SOPA

Product range overview

FESTO

- Sensing range 20 ... 200 µm
- Switch outputs 2x PNP or 2x NPN
- Sensing of two distance values possible
- Integrated air jet function
- Two-colour LCD display
- 2 distance thresholds, for teach-in

Key features

General	Precise	Easy to use	Reliable and flexible
Lightweight, compact and highly precise, this pneumatic solution offers impressive scope for integration: SOPA features a control module, compressed air regulation, measurement air switch-off and air jet function as well as up to four measuring modules. All in all, an attractively priced solution for low tolerances.	The air gap sensor SOPA senses exactly in the µm range whether the workpiece is lying flat or resting against other workpieces before clamping and whether the machining tool is exactly aligned on the spindle. Two different distance values can be sensed with one measuring module. The solution for two-stage workpiece machining with different surface finishes.	Lightweight, compact and simple into the bargain: thanks to parameterisation via teach-in or numerical setting using three buttons. Simple assembly and commissioning thanks to the inclusion of virtually unregulated compressed air and an integrated air jet function that needs no additional peripheral devices.	The multi-coloured LCD display with clear operating status indication ensures maximum reliability, while selectable monitoring points (1 to 4) and further functions make the application extremely flexible.
