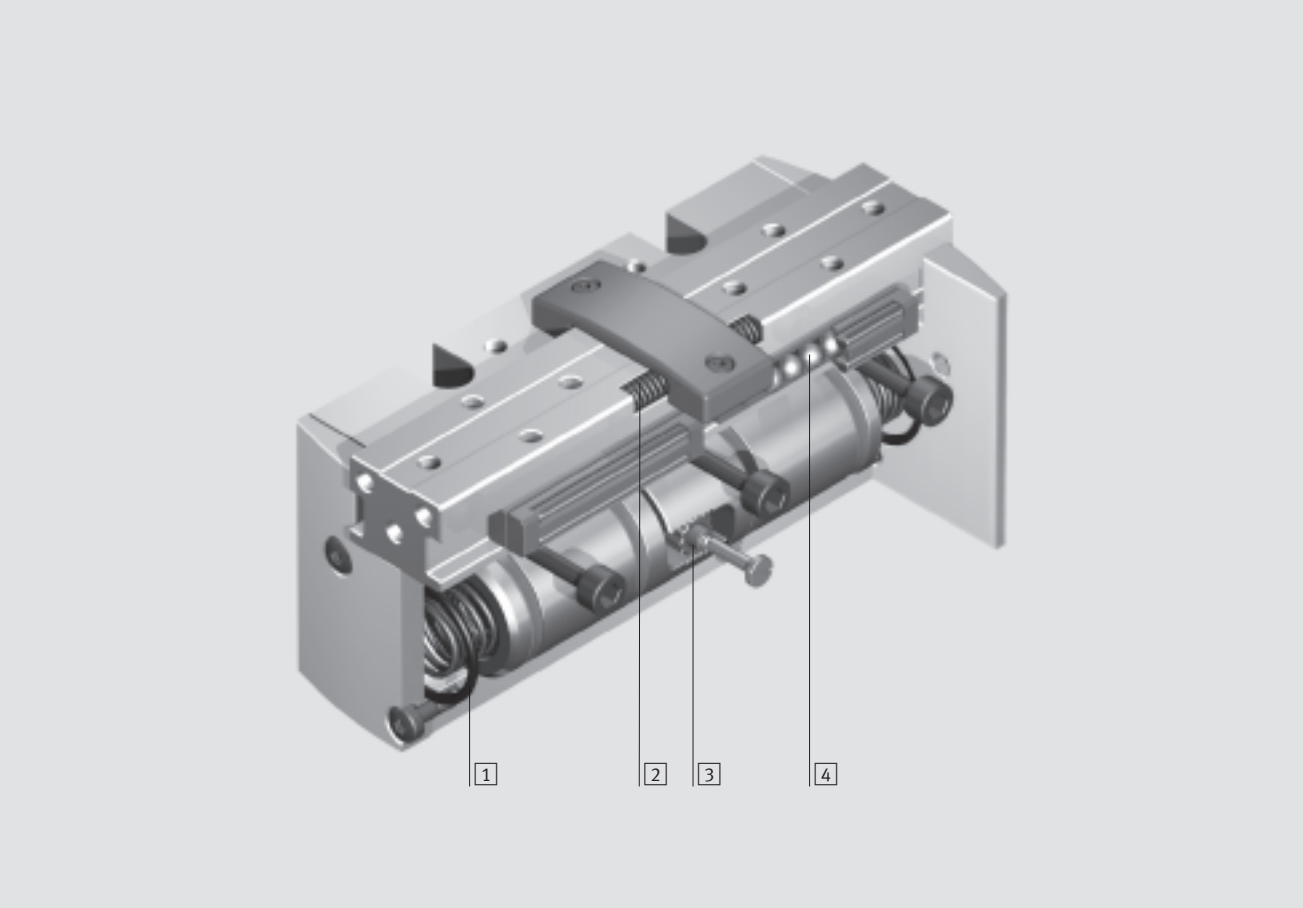
Parallel grippers HGPP, precision

FESTO

Parallel grippers HGPP, precision

Key features



At a glance

- Wide range of variants for greater flexibility:
  - Double-acting piston drive HGPP-...-A.
  - Compression springs for supporting or retaining gripper forces, or for use as a single-acting gripper with only one compressed air connection
- High precision gripper jaw guide
- Choice of gripping action
  - External gripping
  - Internal gripping
- Multiple compressed air connections
- Integrated sensing electronics
- Adaptable proximity sensor via mounting bracket
- Highly flexible thanks to versatile attachment, mounting and applications options
  - Drives
  - Externally adaptable gripper fingers
  - Guide plate

1 Compression spring closes gripper jaws: HGPP-...-G2
2 Compression spring opens gripper jaws: HGPP-...-G1
3 Synchronisation element
4 Backlash-free guide bearing

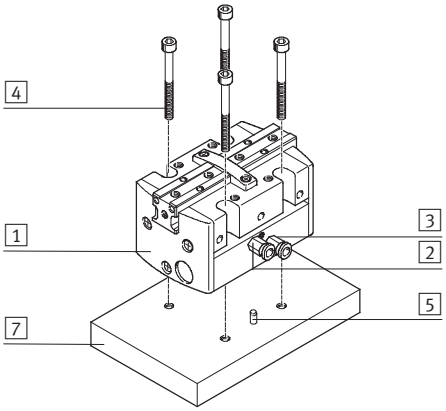
Parallel grippers HGPP, precision

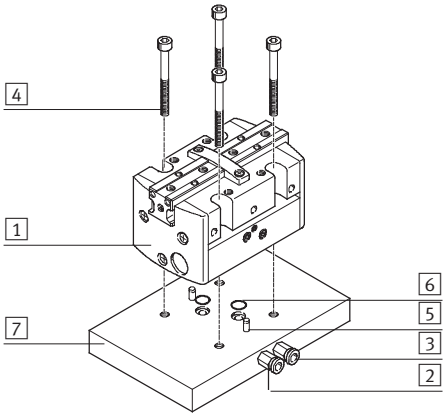
Features

Versatile air connections and mounting options

Supply port direct at the front,
direct mounting from above



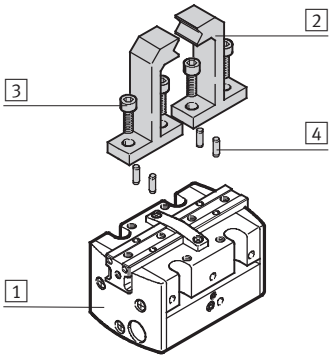
Supply port via adapter plate from underneath,
direct mounting from above



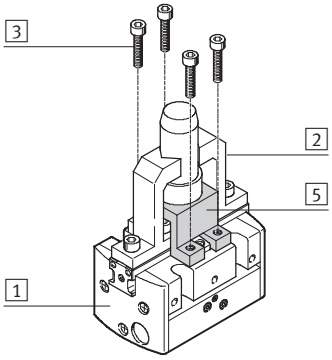
1 Parallel gripper
2 Compressed air connection, opening
3 Compressed air connection, closing
4 Mounting screws
5 Locating pins
6 O-rings
7 Plate (user-specific)

Range of applications (user-specific)

Attachment of external gripper fingers



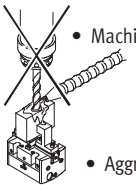
Used as guide plate



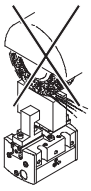
1 Parallel gripper
2 Gripper finger
3 Mounting screws
4 Locating pins
5 Guide plate

Note

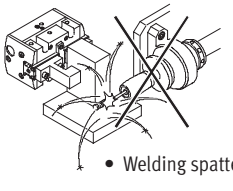
Grippers are not suitable for the following, or for similar applications:



- Machining
- Aggressive media



- Grinding dust



- Welding spatter

General technical data							
Size		10	12	16	20	25	32
Design		Rack and pinion					
Mode of operation		Double-acting					
Gripper function		Parallel					
Number of gripper jaws		2					
Max. weight force per external gripper finger[1]	[N]	< 0.5	< 1	< 1.5	< 2	< 2.5	< 3
Stroke per gripper jaws	[mm]	2	2.5	5	7.5	10	12.5
Pneumatic connection		M3		M5			G1/8/M5[2]
Repetition accuracy[3]	[mm]	< 0.02	< 0.015		< 0.01	< 0.02	
Max. interchangeability	[mm]	0.2					
Max. gripper jaw backlash	[mm]	0					
Max. gripper jaw angular lash	[°]	0					
Max. operating frequency	[Hz]	4					
Centring precision	[mm]	< ∅ 0.05					
Position sensing		For proximity sensing					
Type of mounting		With through-hole and locating pin					
		With female thread and locating pin					

1) Valid for unthrottled operation
2) Supply port on side G1/8; supply port on ground M5
3) End-position drift under constant conditions of use with 100 consecutive strokes in the direction of movement of the gripper jaws

Note: This product conforms to ISO 1179-1 and to ISO 228-1

Operating and environmental conditions			
Min. operating pressure	HGPP-...-A	[bar]	2
	HGPP-...-G...		5
Max. operating pressure		[bar]	8
Operating medium			Compressed air in accordance with ISO 8573-1:2010 [7:4:4]
Note on operating/pilot medium			Operation with lubricated medium possible (in which case lubricated operation will always be required)
Ambient temperature[1]		[°C]	+5 ... +60
Corrosion resistance class CRC[2]			2

1) Note operating range of proximity sensors
2) Corrosion resistance class 2 according to Festo standard 940 070
Components requiring moderate corrosion resistance. Externally visible parts with primarily decorative surface requirements which are in direct contact with a surrounding industrial atmosphere or media such as cooling or lubricating agents

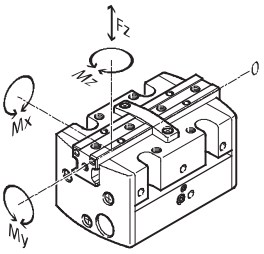
Opening	80	116	204	340	500	830
Closing	80	116	204	340	500	830

Characteristic load values at the gripper jaws



Indicated permissible forces and torques apply to a single gripper jaw. Static forces and torques relate to additional applied loads caused by the workpiece or external gripper fingers, as well as forces which occur during handling. The zero co-ordinate line (gripper jaws point of rotation) must be taken into consideration for the calculation of torques. Additionally, max. permissible forces which may be applied to the housing have been entered as well, which, for example, can be absorbed by a guide plate during pressing-in operations.

Size		10	12	16	20	25	32
Max. permissible force $F_{ZGripper\ jaws}$	[N]	40	70	130	220	380	720
Max. permissible force $F_{ZHousing}$	[N]	200	400	600	800	1,000	1,200
Max. permissible torque M_X	[Nm]	1.5	3	7	14	21	30
Max. permissible torque M_Y	[Nm]	1.5	3	7	14	21	30
Max. permissible torque M_Z	[Nm]	1.5	3	7	14	21	30

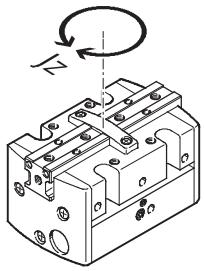
Mass moment of inertia [kgm²x10⁻⁴]

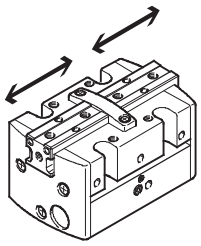


Mass moment of inertia [kgm²x10⁻⁴] for parallel grippers in relation to the central axis, without load.

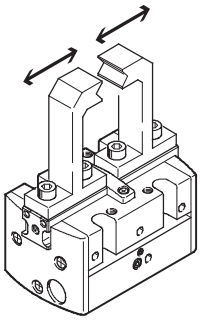
Size	10	12	16	20	25	32
HGPP-...-A	0.43	0.73	2.39	6.22	16.68	38.34
HGPP-...-G1	0.45	0.76	2.58	6.71	17.45	39.21
HGPP-...-G2	0.43	0.74	2.45	6.27	16.85	38.63

Opening and closing times [ms] at 6 bar

without external gripper fingers



with external gripper fingers



The indicated opening and closing times [ms] have been measured at room temperature and 6 bar operating pressure with vertically mounted gripper and without external gripper fingers. Load is increased if external gripper fingers are attached. This means that kinetic energy is also increased, as this is determined by gripper finger weight and velocity. If permissible kinetic energy is exceeded, various parts of the gripper may be damaged. This occurs when the applied load reaches the end-position and the cushioning is only able to partially convert the kinetic energy into potential energy and heat energy. It thus becomes apparent that the indicated max. permissible applied load due to the external gripper fingers must be checked and maintained. The grippers must be throttled for greater applied loads. Opening and closing times must then be adjusted accordingly.

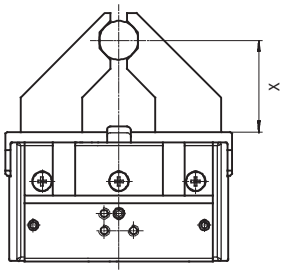
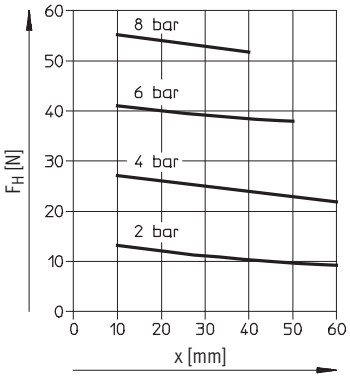
Gripping force F_H as a function of operating pressure and the lever arm x

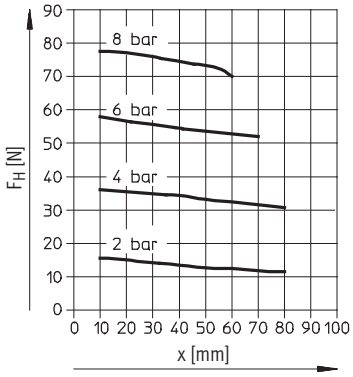
Gripping forces related to operating pressure and lever arm can be determined for the various sizes with the following graphs.



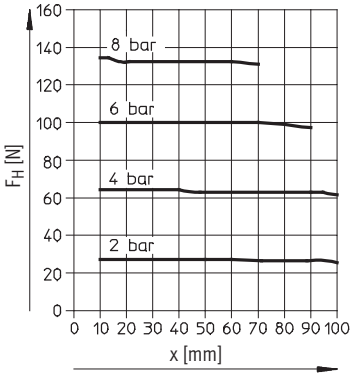
HGPP-10-A



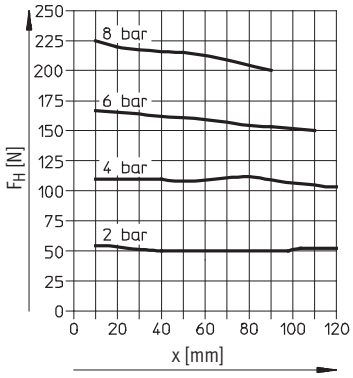
HGPP-12-A



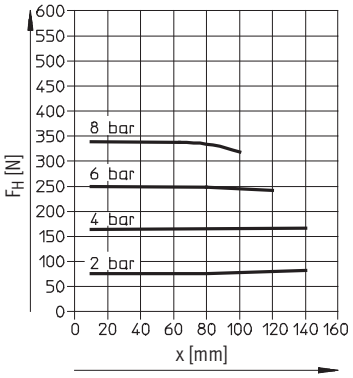
HGPP-16-A



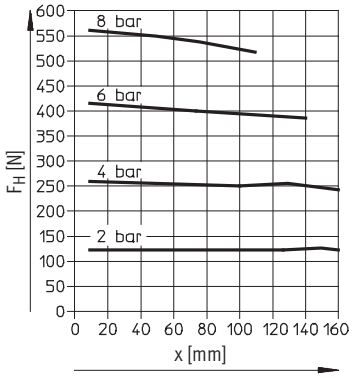
HGPP-20-A



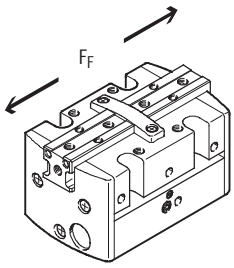
HGPP-25-A



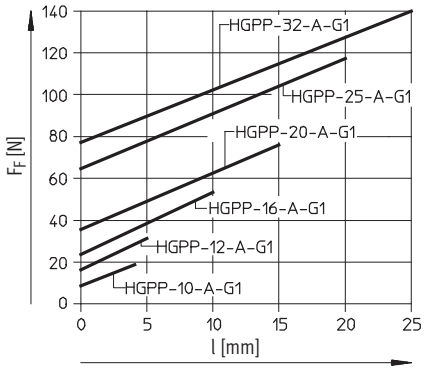
HGPP-32-A

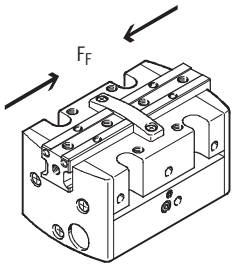


Spring force F_F as a function of the gripper size and overall stroke length l

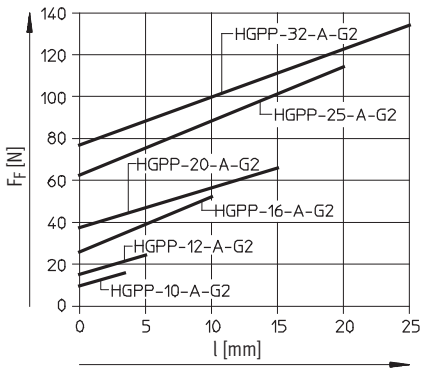


Gripper retention force, opening: the spring forces F_F of the parallel gripper HGPP-...-G1 can be determined from the following graphs.





Gripper retention force, closing: the spring forces F_F of the parallel gripper HGPP-...-G2 can be determined from the following graphs.



Determination of actual gripping forces for HGPP-...-G1 and HGPP-...-G2 depending upon the application

The parallel grippers with integrated spring can be used as:

- single-acting grippers
- grippers with supplementary gripping force and
- grippers with gripping force retention

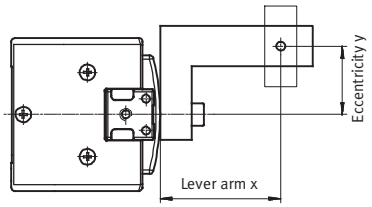
In order to calculate available gripping forces F_{Gr} (per gripper jaw), gripping force (F_H) and spring force (F_F) must be combined accordingly.

Application

	Single-acting	Supplementary gripping force	Gripping force retention
The resulting gripping force F_{Gr}, conditional on the application, depends on the gripping action (external/internal gripping) and the gripper design (with/without spring return). The spring force is supplemented in accordance with the design and gripping action.	• Gripping with spring force: $F_{Gr} = F_F$ • Gripping with pressure force: $F_{Gr} = F_H - F_F$	• Gripping with pressure and spring force: $F_{Gr} = F_H + F_F$	• Gripping with spring force: $F_{Gr} = F_F$

		Pressurised (in gripping action)	Unpressurised
HGPP-...-A	Internal gripping	$F_{Gr} = F_H$	$F_{Gr} = 0$
	External gripping	$F_{Gr} = F_H$	$F_{Gr} = 0$
HGPP-...-G1	Internal gripping	$F_{Gr} = F_H + F_F$	$F_{Gr} = F_F$
	External gripping	$F_{Gr} = F_H - F_F$	$F_{Gr} = 0$
HGPP-...-G2	Internal gripping	$F_{Gr} = F_H - F_F$	$F_{Gr} = 0$
	External gripping	$F_{Gr} = F_H + F_F$	$F_{Gr} = F_F$

Gripping force F_H at 6 bar as a function of lever arm x and eccentricity y



Gripping forces at 6 bar dependent upon eccentric application of force and the maximum permissible off-centre point of force application can be determined for the various sizes using the following graphs.

Calculation example

Given:
Gripper HGPP-12-A
Lever arm x = 20 mm
Eccentricity y = 22 mm
To be found:
Gripping force at 6 bar

Procedure:
- Determine the intersection xy between lever arm x and eccentricity y in the graph for HGPP-12-A
- Draw an arc (with centre at origin) through intersection xy
- Determine the intersection between the arc and the X axis
- Read gripping force

Result:
Gripping force = approx. 55 N

1) Corrosion resistance class 2 according to Festo standard 940 070
Components subject to moderate corrosion stress. Externally visible parts with primarily decorative surface requirements which are in direct contact with a normal industrial environment or media such as coolants or lubricating agents.

Parallel grippers HGPP, precision

Accessories

Adapter kit
HAPG, HMSV, HMVA, DHAA

Material:
Wrought aluminium alloy
Free of copper and PTFE
RoHS-compliant

Note
The kit includes the individual mounting interface as well as the necessary mounting material.

Permissible drive/gripper combinations with adapter kit

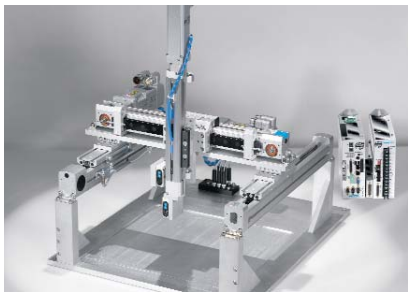
Product Range and Company Overview

A Complete Suite of Automation Services

Our experienced engineers provide complete support at every stage of your development process, including: conceptualization, analysis, engineering, design, assembly, documentation, validation, and production.

Custom Automation Components
Complete custom engineered solutions

Custom Control Cabinets
Comprehensive engineering support and on-site services



Complete Systems
Shipment, stocking and storage services

The Broadest Range of Automation Components

With a comprehensive line of more than 30,000 automation components, Festo is capable of solving the most complex automation requirements.

Electromechanical
Electromechanical actuators, motors, controllers & drives

Pneumatics
Pneumatic linear and rotary actuators, valves, and air supply

PLCs and I/O Devices
PLC's, operator interfaces, sensors and I/O devices

Supporting Advanced Automation... As No One Else Can!
Festo is a leading global manufacturer of pneumatic and electromechanical systems, components and controls for industrial automation, with more than 12,000 employees in 56 national headquarters serving more than 180 countries. For more than 80 years, Festo has continuously elevated the state of manufacturing with innovations and optimized motion control solutions that deliver higher performing, more profitable automated manufacturing and processing equipment. Our dedication to the advancement of automation extends beyond technology to the education and development of current and future automation and robotics designers with simulation tools, teaching programs, and on-site services.

Quality Assurance, ISO 9001 and ISO 14001 Certifications

Festo Corporation is committed to supply all Festo products and services that will meet or exceed our customers' requirements in product quality, delivery, customer service and satisfaction.

To meet this commitment, we strive to ensure a consistent, integrated, and systematic approach to management that will meet or exceed the requirements of the ISO 9001 standard for Quality Management and the ISO 14001 standard for Environmental Management.

Printed on recycled paper at New Horizon Graphic, Inc., FSC certified as an environmentally friendly printing plant.
