Vacuum generators OVEM, NPT

FESTO

Vacuum generators OVEM, NPT

Key features

At a glance

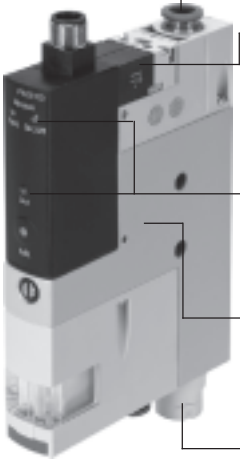
Accelerated vacuum reduction for safe placement of the workpiece by means of integrated solenoid valve for controlling the ejector pulse

Central electrical connection via M12 plug

OVEM-...-2P/2N/PU/NU/PI/NI
Monitoring and visualisation of the vacuum by means of vacuum sensor with LCD display (inchHg)

Adjustment of the ejector pulse via flow control screw

Prevention of contamination of the vacuum generator by means of integrated filter



Quick and secure installation thanks to QS fitting

Fast vacuum build-up by means of integrated solenoid valve for controlling the compressed air supply

OVEM-...-1P/1N
Monitoring of the vacuum and status displays for switching output and solenoid valves by means of a vacuum sensor with LED display

Prevention of pressure drops by means of integrated non-return valve

Maintenance-free operation and reduced noise level through integrated, open silencer

The modular vacuum generator series

The modular vacuum generator series OVEM offers a wide range of individually selectable functions, making it possible to find a solution for the most varied of applications.

Functions	Values
Laval nozzle	0.45 mm
	0.7 mm
	0.95 mm
	1.4 mm
Vacuum generator characteristic	High vacuum
	High suction rate
Housing size	20 mm, metric version, display in bar[1)]
	20 mm, NPT version, display in inchHg
Pneumatic connections	QS fittings, with or without open silencer[1)]
	QS fittings (inch), with or without open silencer
	G female thread, with or without open silencer[1)]
	NPT female thread, with or without open silencer
	Prepared for supply manifold
Normal position of the vacuum generator	Normally open, with or without ejector pulse
	Normally closed, with or without ejector pulse
Electrical connection	M12 plug (5-pin)
Vacuum sensor	Without vacuum sensor
	Switching output 1x PNP or 1x NPN[2)]
	Switching output 2x PNP or 2x NPN[3)]
	Switching output 1x PNP or 1x NPN and analogue output[3)]
Alternative vacuum display	inchHg[1) 3)]
	inchH2O[3)]
	bar[3)]

3) Vacuum sensor with LCD display

Vacuum generators OVEM, NPT

Key features

The innovative vacuum generator

Economical

- Short switching times thanks to integrated solenoid valves
  - Vacuum on/off
  - Ejector pulse
- Quick, precise and safe placement of the workpiece by means of the ejector pulse
- Cost saving through preventive maintenance/service thanks to maintenance indicator
- Cost saving through integrated air-saving function
- Powerful supply of multiple vacuum generators via a common supply manifold (➔ page 17)
- Low-cost variants with one switching output (OVEM-...-1P/1N)

Easy to use

- Simple installation via M12 plugs and QS fittings
- Simple mounting via screws
- All control elements on one side
- Quiet operation thanks to integrated silencers
- Vacuum sensor with LCD display (OVEM-...-2P/2N/PU/NU/PI/N)
  - Vacuum is displayed numerically and as a bar chart
  - Important parameters and diagnostic information are displayed

Reliable

- Permanent monitoring of the entire vacuum system via a vacuum sensor to reduce downtimes (condition monitoring)
- Prevention of pressure loss by means of an integrated air-saving function in conjunction with an integrated non-return valve

Space-saving

All functions are compactly integrated in one unit

- No protruding elements such as valves or vacuum sensor
- Space-optimised installation is possible as all the control elements can be accessed from one side

Easy to maintain

- Integrated filter with inspection window for maintenance display
- Reduced contamination of the vacuum generator thanks to an open silencer

Choice of mounting types

- Direct mounting or via mounting bracket
- Straightforward mounting on H-rail via accessories
- Blocking of multiple vacuum generators on a common supply manifold (➔ page 17)

Operating principle of OVEM

Vacuum ON/OFF

The compressed air supply is controlled by an integrated solenoid valve. The solenoid valve can be supplied with two different switching functions, NC and NO.

- NC - normally closed:
  The vacuum is generated when the vacuum generator is pressurised with compressed air and the solenoid valve has been switched.
- NO - normally open:
  The vacuum is generated when the vacuum generator is pressurised with compressed air and the solenoid valve is in the normal position.

Vacuum sensor

The set or taught-in reference value for the generated vacuum is monitored via an integrated vacuum sensor. If the reference value is reached or if it is not reached due to malfunctions (e.g. leakages, dropped workpiece), the vacuum sensor emits an electrical signal.

Ejector pulse

With a second integrated solenoid valve, an ejector pulse is activated and generated after the vacuum is switched off to release the workpiece safely from the suction cup and to reduce the vacuum quickly.

Connection to higher-level systems

The connection to higher-level systems as well as the configuration of the switching outputs depends on the type of vacuum sensor.

OVEM-...-1P/1N

- Switching inputs for actuating the solenoid valves for vacuum generation and ejector pulse
- One switching output for supplying a control signal
  - Configured as an N/O contact
  - Switching function configured as a threshold value comparator

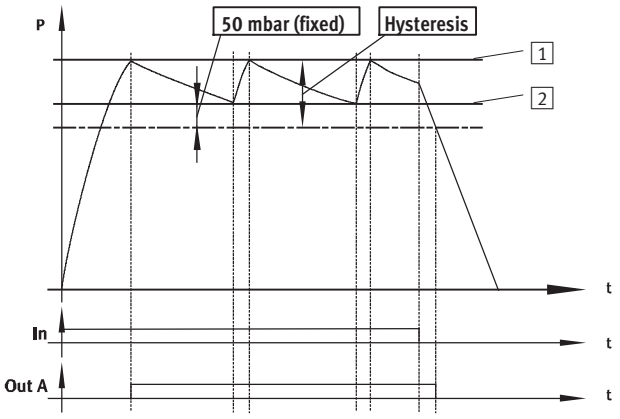
OVEM-...-2P/2N/PU/NU/PI/NI

- One digital switching input for actuating the solenoid valves
- Two digital switching outputs or one digital switching output and one analogue output for supplying control signals
  - Switching outputs can be configured as N/C or N/O contacts
  - Switching function of the outputs can be configured as a threshold value or window comparator
- If there are two switching outputs, these can be configured independently of each other. This enables tasks to be performed in parallel with one vacuum generator, reducing the time needed for sorting good and reject parts, for example.

Vacuum generators OVEM, NPT

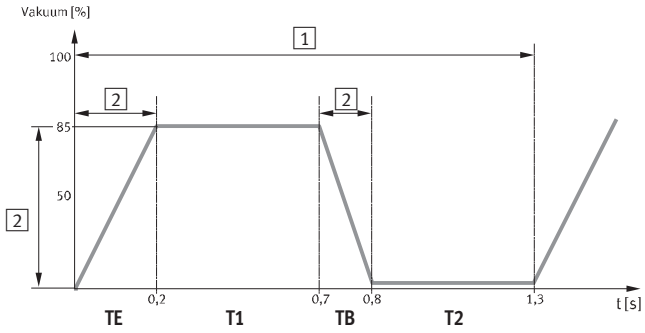
Key features

OVEM-...-2P/2N/PU/NU/PI/NI – Air-saving function LS (-CE, -OE)



If the desired threshold value 1 for the vacuum is reached, vacuum generation is automatically switched off. A non-return valve prevents the reduction of the vacuum. Nonetheless, leakage (e.g. due to rough workpiece surfaces) will slowly reduce the vacuum. If the pressure drops below the threshold value 2, vacuum generation is automatically switched on. Vacuum is generated until the set threshold value 1 is reached again.

OVEM-...-2P/2N/PU/NU/PI/NI – Condition monitoring and diagnostics



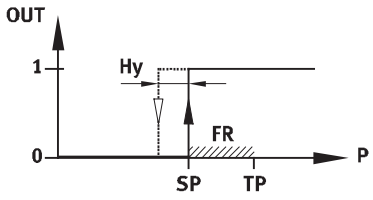
1 Cycle time
2 Monitoring
TE Evacuation time
T1 Transport time
TB Air supply time
T2 Return time

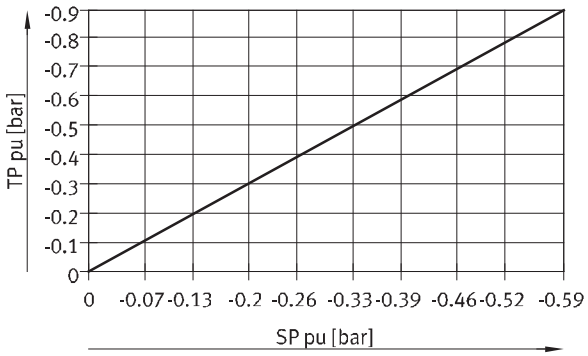
The main operating parameters
- vacuum
- evacuation time and
- air supply time

are continuously measured in the vacuum generator and compared with the individually set reference values (condition monitoring). If deviations in the reference values occur, these will be determined by the vacuum generator and shown on the display (diagnostics). An electrical signal will also be transmitted to the higher-order controller.

This permits preventative action
- in order to prevent machine failure or downtime, for example, through timely maintenance
- and to ensure process reliability (adherence to the cycle time).

OVEM-...-1P/1N – From the teach-in point to the switching point





TP Teach-in point
SP Switching point
Hy Hysteresis
FR Functional reserve

The switching point is determined from the teach-in point and the functional reserve.
A functional reserve (35% of the teach-in pressure) is subtracted from the teach-in pressure
(SP = TP – 0.35*TP).

For example, a switching point of –0.33 bar is set at a teach-in pressure of –0.5 bar.
The hysteresis is fixed.

Vacuum generators OVEM, NPT

Vacuum generators OVEM, NPT

FESTO

Ordering data – Modular products

Ordering table

	Size	20	Conditions	Code		Enter code
M	Module No.	**539075**				
	Vacuum generator	Vacuum generator with solenoid valve for vacuum valve on/off and manual override		**OVEM**		OVEM
	Nominal size of laval nozzle [mm]	0.45		**-05**		
		0.7		**-07**		
		0.95		**-10**		
		1.4		**-14**		
	Ejector characteristic	High vacuum		**-H**		
		High suction rate		**-L**		
	Housing size/width [mm]	20 (inch version)		**-BN**		-BN
	Pneumatic connections	All connections with inch fittings		**-QS**		
		Supply/vacuum port with inch fittings, exhaust port with open silencer		**-QO**		
		All connections with NPT female thread		**-GN**		
		Supply/vacuum port with NPT female thread, exhaust port with open silencer		**-GO**		
		Prepared for supply manifold, vacuum port and exhaust port with inch fittings		**-PL**		
		Prepared for supply manifold, vacuum port with inch fittings, exhaust port with open silencer		**-PO**		
	Normal position of the vacuum generator	NO, normally open (vacuum generation)		**-ON**		
		NO, normally open (vacuum generation) with ejector pulse		**-OE**		
		NC, normally closed (no vacuum generation)		**-CN**		
		NC, normally closed (no vacuum generation) with ejector pulse		**-CE**		
	Electrical connection	Plug M12 (5-pin)		**-N**		-N
O	Vacuum sensor (standard scale in inchHg)	Without vacuum sensor (switching input PNP)				
		Switching output 1x PNP		**-1P**		
		Switching output 1x NPN		**-1N**		
		Switching output 2x PNP		**-2P**		
		Switching output 1x PNP + U		**-PU**		
		Switching output 1x PNP + I		**-PI**		
		Switching output 2x NPN		**-2N**		
		Switching output 1x NPN + U		**-NU**		
		Switching output 1x NPN + I		**-NI**		
	Alternative vacuum display	inch H2O		**-W**		
		bar		**-B**

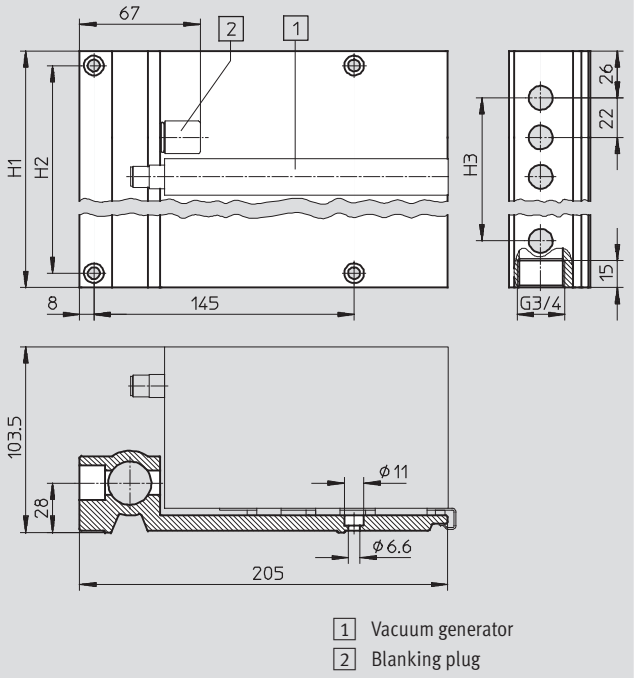
539075	OVEM	–		–		–	BN	–		–		–	N	–		–	

Common supply manifold OABM-P
for vacuum generator
OVEM-...-PL/PO

Pneumatic connection 1: G¾
Type of mounting: Via through-hole

Material: Wrought aluminium alloy

Note on materials:
RoHS-compliant



Dimensions			
Number of device locations	H1	H2	H3
4	118	102	66
6	162	146	110
8	206	190	154

Tubing I.D. d_i as a function of total air consumption q_{nN}																
Total air consumption [l/min]																
50	75	154	175	225	310	400	480	500	750	890	1,000	1,190	1,340	1,850	2,240	2,300	2,900

Recommended tubing														Technical data ➔ Internet: pun, pan			
PUN-4	PUN-6			PUN-8			PUN-10			PUN-12		PUN-16					PAN-16

1) With a tubing length of 3 m

Note

The total air consumption of the fully equipped common supply manifold can be determined by adding the individual consumption of each generator used. Note that in the case of vacuum generators with ejector pulse (OE, CE), the individually set values for the ejector pulse (duration and intensity) can result in much higher air consumption.

Ordering data and weight					
	Number of device locations	CRC[1]	Weight [g]	Part No.	Type
Common supply manifold	4	2	767	**549456**	**OABM-P-4**
	6	2	1045	**549457**	**OABM-P-6**
	8	2	1330	**549458**	**OABM-P-8**

1) Corrosion resistance class 2 according to Festo standard 940 070
Components subject to moderate corrosion stress. Externally visible parts with primarily decorative surface requirements which are in direct contact with a normal industrial environment or media such as coolants or lubricating agents.

Blanking plug OASC-G1-P
for common supply manifold
OABM-P-...

Type of mounting: Screw-in
Max. tightening torque: 10 Nm

Materials:
Hollow bolt: Wrought aluminium alloy
Blanking cap: Steel
Seals: Steel, nitrile rubber
Note on materials:
RoHS-compliant

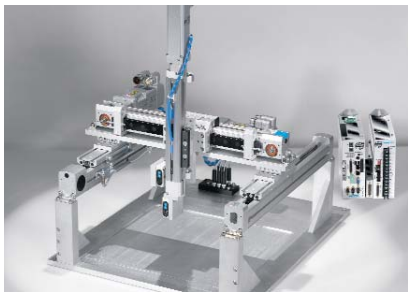
Product Range and Company Overview

A Complete Suite of Automation Services

Our experienced engineers provide complete support at every stage of your development process, including: conceptualization, analysis, engineering, design, assembly, documentation, validation, and production.

Custom Automation Components
Complete custom engineered solutions

Custom Control Cabinets
Comprehensive engineering support and on-site services



Complete Systems
Shipment, stocking and storage services

The Broadest Range of Automation Components

With a comprehensive line of more than 30,000 automation components, Festo is capable of solving the most complex automation requirements.

Electromechanical
Electromechanical actuators, motors, controllers & drives

Pneumatics
Pneumatic linear and rotary actuators, valves, and air supply

PLCs and I/O Devices
PLC's, operator interfaces, sensors and I/O devices

Supporting Advanced Automation... As No One Else Can!

Festo is a leading global manufacturer of pneumatic and electromechanical systems, components and controls for industrial automation, with more than 12,000 employees in 56 national headquarters serving more than 180 countries. For more than 80 years, Festo has continuously elevated the state of manufacturing with innovations and optimized motion control solutions that deliver higher performing, more profitable automated manufacturing and processing equipment. Our dedication to the advancement of automation extends beyond technology to the education and development of current and future automation and robotics designers with simulation tools, teaching programs, and on-site services.

Quality Assurance, ISO 9001 and ISO 14001 Certifications

Festo Corporation is committed to supply all Festo products and services that will meet or exceed our customers' requirements in product quality, delivery, customer service and satisfaction.

To meet this commitment, we strive to ensure a consistent, integrated, and systematic approach to management that will meet or exceed the requirements of the ISO 9001 standard for Quality Management and the ISO 14001 standard for Environmental Management.

FSC Printed on recycled paper at New Horizon Graphic, Inc., FSC certified as an environmentally friendly printing plant.
