

Twin-piston semi-rotary drives DRRD

★ / ☆	Festo core product range Covers 80% of your automation tasks	★ Ready for dispatch from the Festo factory in 24 hours Held in stock in 13 service centres worldwide More than 2200 products
Worldwide:	Always in stock	★ Ready for dispatch in 5 days maximum from stock
Superb:	Festo quality at an attractive price	Assembled for you in 4 service centres worldwide
Easy:	Reduces procurement and storing complexity	Up to 6 x 10 ¹² variants per product series

Twin-piston semi-rotary drives DRRD

FESTO

Features

At a glance

- Rack and pinion principle
- Very high accuracy in the end positions
- Very high bearing load capacity
- Very good axial run-out at the flanged shaft
- High mass moments of inertia
- Low backlash and good dynamic response
- Splash-proof design to IP65 based on EN 60529
- Defined interfaces
- Supply port at one end
- Choice of mounting options
- Ideal for use in handling applications

Wide choice of variants

Flanged shaft

- Size 8 ... 63
- Torque: 0.2 ... 112 Nm
- Swivel angle: 0 ... 180°

Drive shaft

- Size 12 ... 40
- Torque: 0.8 ... 24.1 Nm
- Swivel angle: 0 ... 180°
- Suitable for ATEX
- Can be ordered as an accessory

Position sensing

- Size 8 ... 12
 - C-slot for proximity sensor SMT/SME-10
- Size 16 ... 63
 - T-slot for proximity sensor SMT/SME-8

External position sensing (sensor mounting)

- Size 16 ... 63
- Position sensing possible directly at the flanged shaft
- Inductive proximity sensors SIES can be used in combination with external position sensing

Cushioning

- Size 12 ... 63
- Five cushioning types available:
 - Elastic cushioning with metal end position (P)
 - Shock absorber (Y9)
 - Shock absorber, hard (Y10)
 - Shock absorber, external (Y12)
 - Shock absorber, soft (Y14)

External cushioning

- Size 12 ... 63
- The full torque can be realised in the end positions in combination with external cushioning

Energy throughfeed

- Size 16 ... 63
- Electrical signals or compressed air can be transferred through the hollow shaft using the energy throughfeed. This enables fast and easy supply of the parts connected to the flange (e.g. gripper)

Intermediate position

- Size 16 ... 50
- The semi-rotary drive can additionally be positioned at 90° using the intermediate-position module.
- The intermediate position can be approached from both directions
- The cushioning for the intermediate position corresponds to the cushioning for the basic drive. Except in the case of cushioning Y12, when shock absorbers Y9 are used

End-position locking

- Size 16 ... 63
- Mechanical lock in the end positions to prevent unwanted movement in unpressurised condition

Technical data

Operating and environmental conditions		
Operating medium		Compressed air to ISO 8573-1:2010 [7:4:4]
Note on operating/pilot medium		Lubricated operation possible (in which case lubricated operation will always be required)
Operating pressure		
DRRD-...-P	[bar]	3 ... 8
DRRD-...-Y9/-Y12	[bar]	2 ... 10
Ambient temperature	[°C]	−10 ... +60
Storage temperature	[°C]	−20 ... +60

Weight [g]			
Size	8	10	12
DRRD-...-P	155	245	380
DRRD-...-Y9	–	–	385
DRRD-...-Y12	–	–	500

Forces and torques				
Size		8	10	12
Theoretical torque at 6 bar [Nm]		0.2	0.4	0.8
Max. permissible mass moment of inertia				
DRRD-...-P [kgcm ²]		15	20	80
DRRD-...-Y9 [kgcm ²]		–	–	300
DRRD-...-Y12 [kgcm ²]		–	–	300

 Note

If, in the end positions, a torque which exceeds 50% of the theoretical torque acts against the direction of rotation, no exact end position is guaranteed.

This can be avoided by using external shock absorbers (Y12) or a semi-rotary drive with double the torque.

Materials

Sectional view

Semi-rotary drive		
1	Piston	Copper base alloy
2	Flanged shaft	High-alloy stainless steel
3	Housing	Wrought aluminium alloy, hard-anodised
4	Port plug	High-alloy stainless steel
	Seals	NBR
	Piston seal	TPE-U(PU)
	Note on materials	RoHS compliant
		Contains paint-wetting impairment substances

Twin-piston semi-rotary drives DRRD-8 ... 12

Technical data

FESTO

Swivel angle

Fundamentally, the following applies:

Swivel angle $\alpha \geq$ cushioning angle β

Swivel angle $\alpha = 180^\circ + \Delta\alpha_{\text{clockwise}} + \Delta\alpha_{\text{anti-clockwise}}$

Size		8	10	12
Swivel angle α	[°]	180		
Min. swivel angle $\alpha^{1)}$				
DRRD-...-P	[°]	38	37	32
DRRD-...-Y9	[°]	–	–	48
DRRD-...-Y12	[°]	–	–	20
Max. swivel angle α				
DRRD-...	[°]	200		
DRRD-...-Y12	[°]	–	–	192
Swivel angle adjustment α per side (infinitely adjustable)				
DRRD-...-P	[°]	–100 ... +10		
DRRD-...-Y9	[°]	$\geq -100 ... +10$		
DRRD-...-Y12	[°]	–	–	–92 ... +6
Cushioning angle β				
DRRD-...-P	[°]	38	37	32
DRRD-...-Y9	[°]	–	–	48
DRRD-...-Y12	[°]	–	–	10

1) It is possible to set smaller swivel angles. However, this reduces the cushioning energy.

Swivel angle adjustment

Clockwise direction of rotation:

- Swivel angle decreases

Anticlockwise direction of rotation:

- Swivel angle increases

The swivel angle is adjusted via the cushioning components using an Allen key. Any reduction in the swivel angle should preferably be evenly split between the two end positions.

Twin-piston semi-rotary drives DRRD-8 ... 12

Technical data

FESTO

Max. permissible mass moment of inertia J at the flanged shaft as a function of swivel time t
(at room temperature and an operating pressure of 6 bar)

Twin-piston semi-rotary drives DRRD-8 ... 12

Technical data

FESTO

Max. load capacity at the flanged shaft

The zero point for dimension z is always the flange level of the basic drive, independently of the mounting parts (flange assembly).

The following equation applies to combined loads (axial and radial):

$$\frac{F_{y(z)}}{F_{y, \max.(z)}} + \frac{F_{x(y)}}{F_{x, \max.(y)}} \leq 1$$

Dynamic values

Max. radial force F_y as a function of distance z

— DRRD-8
- - - DRRD-10
- · - DRRD-12

Max. axial force F_x as a function of distance y

- - - Tensile force limit DRRD-8/10
- · - Tensile force limit DRRD-12

Static values

Max. radial force F_y as a function of distance z

— DRRD-8
- - - DRRD-10
- · - DRRD-12

Max. axial force F_x as a function of distance y

- - - Tensile force limit DRRD-8/10
- · - Tensile force limit DRRD-12

Twin-piston semi-rotary drives DRRD-8 ... 12

Technical data

FESTO

Max. load capacity on drive shaft (DARF-Q11)

Max. radial forces F_y / axial forces F_x / bending moment M

- For the radial forces F_y , the limits of the flanged shaft → page 12 and max. bending moment of the drive shaft apply → table below.
- The bending moment represents the load limit of the drive shaft and must not be exceeded.
- The zero point for dimension z is always the flange level of the basic drive, independently of the mounting parts (flange assembly).
- The axial force represents an additional load.

Size		12
Axial force F_x	[N]	170
Bending moment M	[Nm]	5.44

DRRD-...-Y12	[kgcm ²]	500	900	1500	8000	15000	23000	40000	–

 Note

If, in the end positions, a torque which exceeds 50% of the theoretical torque acts against the direction of rotation, no exact end position is guaranteed.

This can be avoided by using external shock absorbers (Y12) or a semi-rotary drive with double the torque.

 Note

The cushioning for the intermediate position corresponds to the cushioning for the basic drive. Except in the case of cushioning Y12 when shock absorbers Y9 are used.

In combination with cushioning P, the intermediate position is only available for sizes 16 ... 32.

Materials

Sectional view

Semi-rotary drive	
1 End cap	Anodised wrought aluminium alloy
2 Piston	Stainless steel
3 Flanged shaft	Tempered steel
4 Housing	Wrought aluminium alloy, hard-anodised
Seals	NBR
Piston seal	TPE-U(PU)
Note on materials	RoHS compliant
	Contains paint-wetting impairment substances

Twin-piston semi-rotary drives DRRD-16 ... 63

Technical data

FESTO

Swivel angle

Fundamentally, the following applies:

Swivel angle $\alpha \geq$ cushioning angle β

Swivel angle $\alpha = 180^\circ + \Delta\alpha_{\text{clockwise}} + \Delta\alpha_{\text{anti-clockwise}}$

- - Note
Illustrated position of the flanged shaft corresponds to the mid-position (swivel angle 90°).

Size		16	20	25	32	35	40	50	63

Cushioning angle β									
DRRD-...-P	[°]	36	45	33	33	36	23	–	–
DRRD-...-Y9/-Y10/-Y14	[°]	43	72	79	82	85	56	61	48
DRRD-...-Y12	[°]	10	12	19	17	17	17	15	17

1) It is possible to set smaller swivel angles. However, this reduces the cushioning energy.

2) The max. swivel angle is reduced by approx. 10° in combination with the external sensor mounting

Swivel angle adjustment

Clockwise direction of rotation:

- Swivel angle decreases

Anticlockwise direction of rotation:

- Swivel angle increases

The swivel angle is adjusted via the cushioning components using an Allen key. Any reduction in the swivel angle should preferably be evenly split between the two end positions.

Swivel angle adjustment of the intermediate position → page 40

Energy throughfeed

DRRD-...-P...E...

Function

Electrical signals or compressed air can be transferred through the hollow shaft using the energy throughfeed.

Benefits

- Fast and easy supply of the parts connected to the flange (e.g. gripper)
- Tubing and electrical cables are not damaged by the rotation
- Two variants available:
 - Pneumatic
 - Pneumatic and electrical
- Different number of connections depending on the size

Note

Only connecting cables with straight connectors can be used (→ page 62).

Intermediate position DRRD-...-PS1

Function

The intermediate-position module enables an additional position to be set, at half of the nominal rotation angle (90°).

A piston with two screwed-in guide

systems is supplied with compressed air and moves the racks of the unpressurised semi-rotary drive until both pistons rest on the plungers positioned in the guide systems and are

held in this position. The movement is cushioned using a shock absorber. For further movement to the end position, the semi-rotary drive is

pressurised with compressed air. The piston of the basic drive thus moves the entire intermediate-position piston back into its initial position.

Feature

- Setting range: 90° ±10°
- Cushioning variants: P, Y9
- Can be approached and travelled through from both end positions
- Position sensing of the intermediate position possible

Setting the swivel speed

Semi-rotary module and intermediate-position module must only be operated with controlled air flow. The throttles should be connected as close as possible to the semi-rotary drive (e.g. one-way flow control valve GRLA-...) → page 64.

In the event of pressure failure, the payload may hit an end position in an uncontrolled manner. In order to prevent this, piloted check valves HGL or an air reservoir VZS are recommended → page 64.

The following movements are adjusted using the supply ports 1 and 2: end position → intermediate position.

Both directions can be adjusted separately from each other.

The following movement is set via supply port 3.

Intermediate position → end position

Both directions are set simultaneously.

Twin-piston semi-rotary drive DRRD-16 ... 63

Technical data

FESTO

DRRD-...-PS1 – Intermediate position

Swivel angle adjustment

By pushing the shock absorber as far as the stop, the flanged shaft of the semi-rotary drive rotates into the intermediate position.

In delivered state, the intermediate position is set to 90°. By screwing in

or unscrewing the shock absorbers, the swivel angle can be adjusted by $\pm 10^\circ$.

If the setting dimension $X_{\max}$ is exceeded, the shock absorber can no longer completely cushion the

movement.

If the setting dimension $X_{\min}$ is not reached, the shock absorber not only cushions the intermediate position, but also the end position of the semi-rotary drive.

Wiring of the proximity sensor in combination with the energy throughfeed

Size 16/20

Sizes 25/32/35

Size 40/50/63

Note

Proximity sensors with plug connectors must be used for attachments (e.g. grippers) at the output. On sizes 16 ... 35 these can be connected directly to the energy throughfeed

module.

For sizes 40 ... 63, the proximity sensor must be connected to the energy throughfeed module through a Y-distributor.

63		64

 Note

Function :

The position transmitter continuously senses the position of the piston. It has an analogue output with an output signal in proportion to the piston position.

Setting the swivel speed

Basic drive and intermediate position module must only be operated with controlled air flow. The throttle valves should be connected as close as possible to the semi-rotary drive (e.g. one-way flow control valve GRLA-...) → table below.

In the event of pressure failure, the payload may hit an end position in an uncontrolled manner. In order to prevent this, piloted check valves HGL or an air reservoir VZS are recommended.

Ordering data – Accessories for basic drive

	For size	Description	Weight [g]	Part No.	Type	PU ¹⁾
One-way flow control valve GRLA						
	16 ²⁾ , 20, 25	• To set the swivel speed	14	★ 197576	GRLA-M5-QS-3-RS-D	1
