FESTO

Guide units FEN/FENG for ISO cylinders

FESTO

Key features

At a glance

The guide units FEN and FENG protect ISO cylinders against torsion when these are subjected to high torque loads.

They offer high precision guidance for workpiece handling and other handling applications.

Two guide variants are available:

- Plain-bearing guide (GF)
- Recirculating ball bearing guide (KF)

Position sensing

With ISO cylinder DNC:
When installed, a mounting kit is required to sense the front end position. The rear end position can be sensed directly via the sensor slot.

With ISO cylinder DSNU:
With these ISO cylinders, a mounting kit is absolutely necessary for sensing the end positions.

Characteristic load value for FEN-...-KF/FENG-...-KF

The indicated forces and torques refer to the guide centre.

If the guide unit is subjected to two or more of the indicated forces and torques simultaneously, the following equation must be satisfied in addition to the indicated maximum loads.

Calculating the load comparison factor:

$$f_v = \frac{|F_y|}{F_{y,max}} + \frac{|F_z|}{F_{z,max}} + \frac{|M_x|}{M_{x,max}} + \frac{|M_y|}{M_{y,max}} + \frac{|M_z|}{M_{z,max}} \leq 1$$

Guide units FEN/FENG for ISO cylinders

Technical data

FESTO

Calculating the service life

The service life of the guide depends on the load. To provide a rough indication of the service life of the guide,

the graph below plots the load comparison factor f_v against the service life ratio q .

These values are only theoretical. You must consult your local Festo contact

for load comparison factors f_v greater than 1.5.

Load comparison factor f_v as a function of service life ratio q

Example:

The effect on the service life, deviating from the specified reference service

life, can be determined by means of the service life ratio q :

Given:

Reference service life = 5000 km

Required service life = 3000 km

$$q = \frac{3000\text{km}}{5000\text{km}} = 0.6$$

The graph gives a load comparison factor f_v of 1.2. This means that the permissible resultant load can be utilised up to 120%.

Note

PositioningDrives
engineering software
www.festo.com

$f_v > 1.5$ are only theoretical comparison values.

Guide units FEN/FENG for ISO cylinders

Technical data

FESTO

Calculation example

L_b = Centre of gravity of the moving mass of the guide unit

L_{load} = Centre of gravity of the payload

L_{b_total} = Centre of gravity of the total moving mass

Length measurements should be provided with plus/minus signs as shown in the figure:

$L_{b_total} > 0$ = Centre of gravity of the moving mass is on the payload side

$L_{b_total} < 0$ = Centre of gravity of the moving mass is on the guide side

Given:

- Guide unit: FENG-32-200-KF
- Stroke length: $H = 200$ mm
- Centre of gravity of payload $L_{load} = 15$ mm
- Payload: $m_{load} = 5$ kg
- Acceleration: $a_x = a_y = 2$ m/s², $a_z = 0$ m/s²

To be calculated:

- Loads F_{y_dyn}/F_{z_dyn} and $M_{x_dyn}/M_{y_dyn}/M_{z_dyn}$
- Verification of operation with combined load
- Expected service life

Solution:

Moving load:

$$m_{b_total} = m_b + m_{load} \quad (m_b = m_{ob} + H \times m_{Hb})$$

From table → page 4

$$m_{ob} = 0.483 \text{ kg}$$

$$m_{Hb} = 0.018 \text{ kg/10 mm}$$

$$m_b = 0.483 \text{ kg} + 200 \text{ mm} \times 0.018 \text{ kg/10 mm} = 0.843 \text{ kg}$$

$$m_{b_total} = 0.843 \text{ kg} + 5 \text{ kg} = 5.843 \text{ kg}$$

m_b = Moving mass of the guide unit

m_{ob} = Moving mass with 0 mm stroke

m_{Hb} = Additional mass per 10 mm stroke

H = Stroke length

Centre of gravity of the moving mass

$$L_{b_total} = \frac{L_{load} \times m_{load} + L_b \times m_b}{m_{b_total}} \quad (L_b = L_{ob} + H \times L_{Hb})$$

From table → page 5

$$L_{ob} = 43 \text{ mm}$$

$$L_{Hb} = 4.5 \text{ mm/10 mm}$$

$$L_b = 43 \text{ mm} + 200 \text{ mm} \times 4.5 \text{ mm/10 mm} = 133 \text{ mm}$$

$$L_{b_total} = \frac{(+ 15 \text{ mm}) \times 5 \text{ kg} + (- 133 \text{ mm}) \times 0.843 \text{ kg}}{5.843 \text{ kg}} = - 6 \text{ mm}$$

L_b = Centre of gravity of the moving mass of the guide unit

m_b = Moving mass of the guide unit

L_{load} = Centre of gravity of the payload

m_{load} = Payload

L_{ob} = Centre of gravity of the moving mass with 0 mm stroke

L_{Hb} = Additional centre of gravity of the moving mass per 10 mm stroke

Length measurements should be provided with plus/minus signs as shown in the figure:

$L_{b_total} > 0$ = Centre of gravity of the moving mass is on the payload side

$L_{b_total} < 0$ = Centre of gravity of the moving mass is on the guide side

Guide units FEN/FENG for ISO cylinders

Technical data

Calculation example

Loads $F_{y\text{dyn}}/F_{z\text{dyn}}$ and $M_{x\text{dyn}}/M_{y\text{dyn}}/M_{z\text{dyn}}$

$$F_{y\text{dyn}} = m_{b_total} \times a_y = 5.843 \text{ kg} \times 2 \text{ m/s}^2 = 12 \text{ N}$$

$$F_{z\text{dyn}} = m_{b_total} \times (g + a_z) = 5.843 \text{ kg} \times (9.81 \text{ m/s}^2 + 0 \text{ m/s}^2) = 57 \text{ N}$$

From table → page 6

Dimension X = 83 mm

$$M_{y\text{dyn}} = F_{z\text{dyn}} \times (\text{dimension X} + \text{stroke} + L_{b_total}) = 57 \text{ N} \times (83 \text{ mm} + 200 \text{ mm} + (-6 \text{ mm})) = 16 \text{ Nm}$$

$$M_{z\text{dyn}} = F_{y\text{dyn}} \times (\text{dimension X} + \text{stroke} + L_{b_total}) = 12 \text{ N} \times (83 \text{ mm} + 200 \text{ mm} + (-6 \text{ mm})) = 3 \text{ Nm}$$

Verification of operation with combined load

Max values from table → page 6

$$F_{y\text{max}} = 750 \text{ N} \quad M_{x\text{max}} = 28 \text{ Nm}$$

$$F_{z\text{max}} = 750 \text{ N} \quad M_{y\text{max}} = 34 \text{ Nm}$$

$$M_{z\text{max}} = 34 \text{ Nm}$$

$$f_v = \frac{|F_y|}{F_{y,\text{max}}} + \frac{|F_z|}{F_{z,\text{max}}} + \frac{|M_x|}{M_{x,\text{max}}} + \frac{|M_y|}{M_{y,\text{max}}} + \frac{|M_z|}{M_{z,\text{max}}} \leq 1$$

$$f_v = \frac{12 \text{ N}}{750 \text{ N}} + \frac{57 \text{ N}}{750 \text{ N}} + \frac{0 \text{ Nm}}{28 \text{ Nm}} + \frac{16 \text{ Nm}}{34 \text{ Nm}} + \frac{3 \text{ Nm}}{34 \text{ Nm}} = 0.7 \leq 1$$

Expected service life

$$L_{\text{calc}} = \frac{L_{\text{ref}}}{f_v^3} = \frac{5000 \text{ km}}{0.7^3} = 14000 \text{ km}$$

FESTO

Max. payload F and torque M as a function of cantilever load A

A = Cantilever load
X = Distance to centre of gravity of the payload
S = Centre of gravity of the payload
M = Torque

Explanation of how to read graphs in the case of a combined load

- Determine cantilever load (75 mm)
- Enter proportion that is payload (30 N)
- Enter distance from curve
- Permitted torque is the difference between M2 and M1
