

## Cantilever axes ELCC

FESTO

## Cantilever axes ELCC

Key features

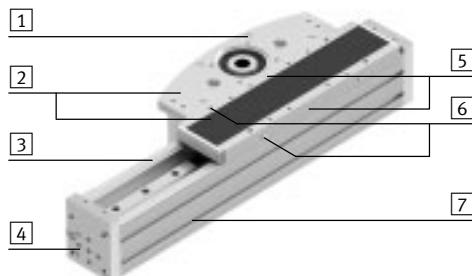

FESTO

### At a glance

- High rigidity thanks to innovative design principle
- Very small moving mass
- Able to move high loads of up to 100 kg vertically
- Optionally with NSF-H1 lubricant for the food zone

- Toothed belt material can be selected from:
  - Chloroprene rubber for long service life
  - Uncoated PU for the food zone
  - Coated PU with steel reinforcements for long service life and resistance to cooling lubricants

### The technology in detail

- 1 Interface for motor attachment
- 2 Drive head
- 3 Cantilever profile
- 4 Front end
- 5 Connection for clamping unit or sealing air
- 6 Lubrication hole
- 7 Mounting slot for accessories

### Protection against particles

- Stainless steel cover strip provides basic protection for the guide

### Motor attachment (can also be mounted underneath)

Axial

With angled gear unit

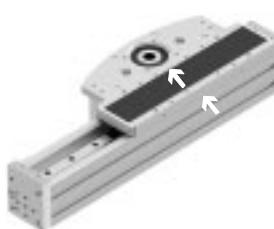

### Additional slide

- Rigidity and load-bearing capacity are increased by having twice as many roller carriages and a greater distance between bearings

### Clamping unit

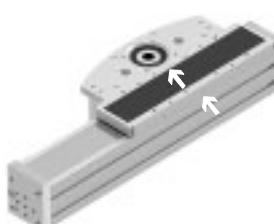

- For holding loads securely (frictional locking)
- Integrated into the axis so it does not protrude
- Acts directly on the guide (in any position)
- Can also be used for emergency braking operations

### Displacement encoder system

- The position is detected incrementally and without contact
- To improve absolute accuracy
- 2-channel solutions are possible together with the motor encoder and a safety relay unit
- For sizes 60/70, the displacement encoder unit is mounted externally; for sizes 90/110, it is concealed under the toothed belt

### Sealing air connection

- Application of vacuum minimises the dispersal of abraded particles into the environment
- Application of gauge pressure prevents dirt from getting into the axis
- Cannot be used in combination with the clamping unit

## Cantilever axes ELCC

Key features

**Complete system comprising toothed belt axis, motor, motor controller and motor mounting kit**

Cantilever axis

Motor

Servo motor EMME-AS

Note  
A range of specially adapted complete solutions is available for the cantilever axis ELCC and the motors.

Motor controller

Servo motor controller CMMP-AS

Motor mounting kit

Axial kit

Kit comprising:

- Motor flange
- Coupling housing
- Coupling
- Screws

ELCC-...-CR [%]	0.17	0.22	0.14	0.17
ELCC-...-PU1/PU2 [%]	0.07	0.08	0.06	-
Width [mm]	30	50	75	100
Effective diameter [mm]	30.558	30.558	50.93	68.755
Feed constant [mm/U]	96	96	160	216

1) At max. feed force

### Mass moment of inertia

Size	60	70	90	110
$J_0$ [kg mm <sup>2</sup> ]	594	1063	5518	15710
$J_S$ per metre stroke [kg mm <sup>2</sup> /m]	887	1471	6290	17491
$J_L$ per kg payload [kg mm <sup>2</sup> /kg]	233	233	648	1182

The mass moment of inertia  $J_A$  of the entire axis is calculated as follows:

Basic variant

$$J_A = J_0 + J_S \times \text{working stroke [m]} + J_L \times m_{\text{payload}} [\text{kg}]$$

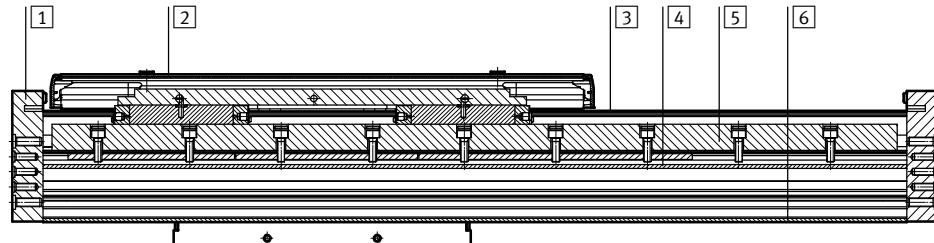

With gear unit

$$J_A = J_G + \frac{J_0 + J_S \times \text{working stroke [m]} + J_L \times m_{\text{payload}} [\text{kg}]}{i^2}$$

$J_G$  = Mass moment of inertia, gear unit

Technical data – Displacement encoder system				
Size	60	70	90	110
Resolution [µm]	2.5			
Max. travel speed [m/s] with displacement encoder system	4			
Encoder signal	5 V TTL; A/A, B/B; reference signal (N/N) cyclically every 5 mm (zero pulse)			
Signal output	Line driver, alternating, resistant to sustained short circuit			
Electrical connection	8-pin plug, round design, M12			
Cable length [mm]	160	160	45	25

### Operating and environmental conditions – Displacement encoder system

Ambient temperature [°C]	-10 ... +70
Degree of protection	IP64
CE marking (see declaration of conformity)	To EU EMC Directive <sup>1)</sup>

1) For information about the applicability of the component see the manufacturer's EC declaration of conformity at: [www.festo.com/sp](http://www.festo.com/sp) → Certificates.

If the component is subject to restrictions on usage in residential, office or commercial environments or small businesses, further measures to reduce the emitted interference may be necessary.

### Technical data – Clamping unit

Size	70	90	110
Pneumatic connection	M5		
Clamping type	Clamping via spring force, released via compressed air		
Static holding force [N]	450	550	850
Max. number of emergency braking operations <sup>1)</sup> at reference energy [J]	1000 30	1000 30	1000 30
Number of clamping operations under nominal load [million switching cycles]	0.05	0.05	0.05

1) Emergency braking refers to braking the payload if the drive axis loses power.

### Operating and environmental conditions – Clamping unit

Operating medium	Compressed air to ISO 8573-1:2010 [7:4:4]
Operating pressure [bar]	4 ... 6.5
Ambient temperature [°C]	-10 ... +60

## Cantilever axes ELCC

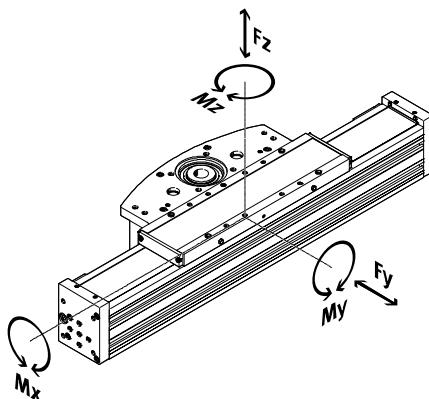

Technical data

### Characteristic load values of the axis in slide operation

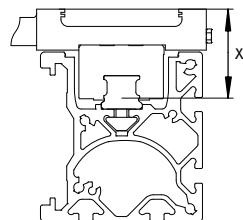

In slide operation, the profile is fixed and mounted in such a way that it does not sag.

The indicated forces and torques refer to the centre of the guide. The point of application of force is the point where the centre of the guide and the longitudinal centre of the slide intersect. These values must not be exceeded during dynamic operation. Special attention must be paid to the cushioning phase.

Distance from the slide surface to the centre of the guide

### Distance from the slide surface to the centre of the guide

Size	60	70	90	110
Dimension x [mm]	29.9	39.1	43.8	54.0

### Max. permissible forces and torques for a service life of 5000 km in slide operation

Size	60	70	90	110
F <sub>y,max.</sub> [N]	4200	9600	13900	20600
F <sub>z,max.</sub> [N]	4100	9400	13500	20000
M <sub>x,max.</sub> [Nm]	35	105	165	315
M <sub>y,max.</sub> [Nm]	290	825	1300	2365
M <sub>z,max.</sub> [Nm]	285	795	1230	2285

For a guide system to have a service life of 5000 km, the load comparison factor must have a value of  $f_v < 1$ , based on the maximum permissible forces and torques for a service life of 5000 km.

If the axis is subjected to two or more of the indicated forces and torques simultaneously, the following equation must be satisfied in addition to the indicated maximum loads:

Calculating the load comparison factor:

$$f_{vG} = \frac{|F_{y,dyn}|}{F_{y,max}} + \frac{|F_{z,dyn}|}{F_{z,max}} + \frac{|M_{x,dyn}|}{M_{x,max}} + \frac{|M_{y,dyn}|}{M_{y,max}} + \frac{|M_{z,dyn}|}{M_{z,max}}$$

## Cantilever axes ELCC

Technical data

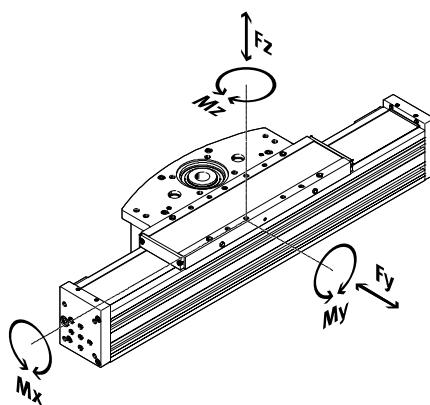

FESTO

### Characteristic load values of the axis in cantilever operation

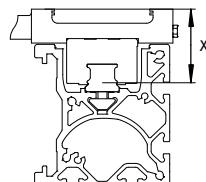

The axis is subjected to a higher load in cantilever operation because of the deflection. The torques are thus reduced in comparison to slide operation.

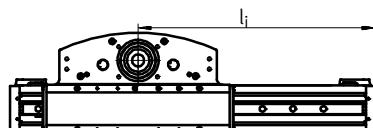

The indicated forces and torques refer to the centre of the guide. The point of application of force is the point where the centre of the guide and the longitudinal centre of the slide intersect. These values must not be exceeded during dynamic operation. Special attention must be paid to the cushioning phase.

Distance from the slide surface to the centre of the guide

Axis positions

#### Distance from the slide surface to the centre of the guide

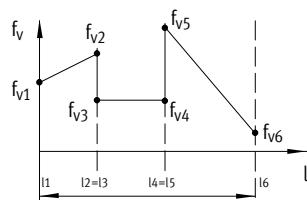

Size	60	70	90	110
Dimension x [mm]	29.9	39.1	43.8	54.0

#### Max. permissible forces and torques for a service life of 5000 km in cantilever operation

Size	60	70	90	110
F <sub>y,perm.</sub> [N]	4200	9600	13900	20600
F <sub>z,perm.</sub> [N]	4100	9400	13500	20000
M <sub>x,perm.</sub> [Nm]	20	50	75	180
M <sub>y,perm.</sub> [Nm]	110	240	350	885
M <sub>z,perm.</sub> [Nm]	90	190	295	615

#### Step 1:

Calculating the load comparison factor  $f_{vi}$  for the different axis positions  $l_i$

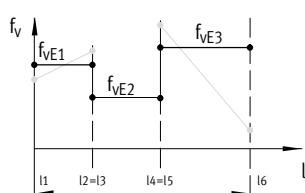

$$f_{vi} = \frac{|F_{y,dyn}|}{F_{y,perm.}} + \frac{|F_{z,dyn}|}{F_{z,perm.}} + \frac{|M_{x,dyn}|}{M_{x,perm.}} + \frac{|M_{y,dyn}|}{M_{y,perm.}} + \frac{|M_{z,dyn}|}{M_{z,perm.}}$$

$f_{vi}$  :  $f_{v1}, f_{v2}, f_{v3}, f_{v4}, f_{v5}, f_{v6}, \dots$

If all  $f_{vi} \leq 1$ , then for simplicity the following can be assumed: total load comparison factor  $f_{VG}$  corresponds to the largest  $f_{vi}$ ; steps 2-3 can be omitted.

If one  $f_{vi} > 1$ , the exact total load comparison factor  $f_{VG}$  should be calculated using steps 2 and 3.

$$f_{vei} = \sqrt[3]{\frac{(f_{vi} + f_{vi+1}) \times (f_{vi}^2 + f_{vi+1}^2)}{4}}$$

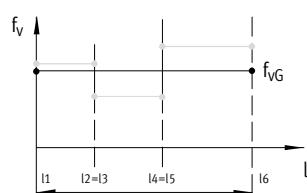

$f_{vei}$  :  $f_{ve1}, f_{ve2}, f_{ve3}, \dots$

$f_{ve1}$  : Substitute load comparison factor for partial stroke 1

$l_1$  to  $l_2$  : Partial stroke 1

#### Step 2:

Calculating the substitute load comparison factors for the different partial strokes  $f_{vei}$

$$f_{vg} = \sqrt[3]{\sum \frac{f_{vei}^3 \times (l_{i+1} - l_i)}{l_{ges}}}$$

$f_{vg}$  : Load comparison factor for total stroke

#### Step 3:

Calculating the load comparison factor  $f_{VG}$  for the total stroke

$$L = \frac{5000 \text{ km}}{f_{vg}^3}$$

#### Step 4:

Calculating the service life

## Cantilever axes ELCC

Technical data

### Calculating the service life

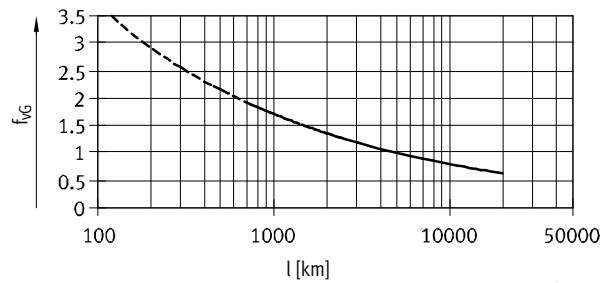

The service life of the guide depends on the load. To be able to make a statement about the service life of the guide, the graph below plots the total load comparison factor  $f_{vG}$  against the service life.

#### Total load comparison factor $f_{vG}$ as a function of service life

Example:

A user wants to move an X kg load. Using the formula (→ page 11/12) gives a value of 1.5 for the total load comparison factor  $f_{vG}$ . According to the graph, the guide has a service life of approx. 1500 km.

These values are only theoretical. You must consult your local Festo contact for a total load comparison factor  $f_{vG}$  greater than 1.5.

#### - Note

PositioningDrives  
engineering software  
[www.festo.com](http://www.festo.com)

The software can be used to calculate a guide workload for a service life of 5000 km.

### Comparison of the characteristic load values for 5000 km with dynamic forces and torques of recirculating ball bearing guides

The characteristic load values of bearing guides are standardised to ISO and JIS using dynamic and static forces and torques. These forces and torques are based on an expected guide system service life of 100 km to ISO or 50 km to JIS. As the characteristic load values are dependent on the service life, the maximum permissible forces and torques for a 5000 km service life cannot be compared with the dynamic forces and torques of bearing guides to ISO/JIS.

To make it easier to compare the guide capacity of cantilever axes ELCC with bearing guides, the table below lists the theoretically permissible forces and torques for a calculated service life of 100 km. This corresponds to the dynamic forces and torques to ISO.

These 100 km values have been calculated mathematically and are only to be used for comparing with dynamic forces and torques to ISO. The drives must not be loaded with these characteristic values as this could damage the axes.

#### Max. permissible forces and torques for a theoretical service life of 100 km (from a guide perspective only)

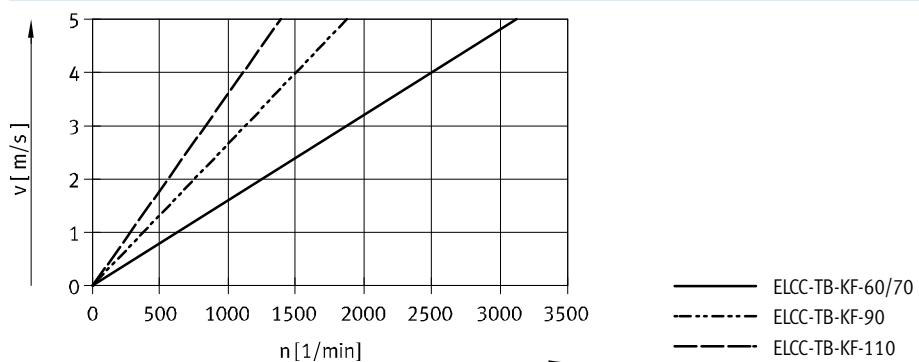

Size	60	70	90	110
$F_y$ <sub>max.</sub> [N]	17101	39712	57255	84489
$F_z$ <sub>max.</sub> [N]	16410	37901	54354	80725
$M_x$ <sub>max.</sub> [Nm]	138	401	643	1221
$M_y$ <sub>max.</sub> [Nm]	1126	3138	4838	8982
$M_z$ <sub>max.</sub> [Nm]	1086	2954	4548	8488

## Cantilever axes ELCC

Technical data

### Stroke reserve

L19 = Nominal stroke  
L20 = Stroke reserve

- The stroke reserve is a safety distance which is not used in normal operation
- The sum of the nominal stroke and 2x stroke reserve must not exceed the maximum working stroke

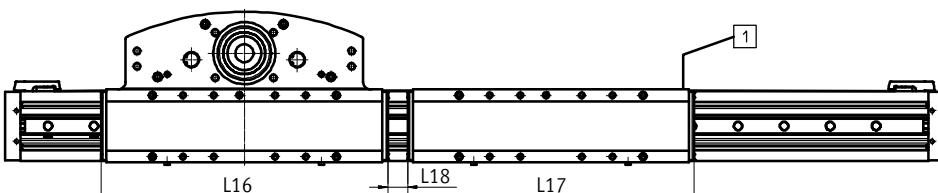

- The stroke reserve length can be freely selected
- The stroke reserve is defined via the "stroke reserve" characteristic in the modular product system.

**Example:**  
Type ELCC-TB-KF-70-500-20H-...  
Nominal stroke = 500 mm  
2x 20 mm stroke reserve = 40 mm  
Working stroke = 540 mm  
(540 mm = 500 mm + 2x 20 mm)

### Working stroke reduction

For axis ELCC with additional slide ZL/ZR

For a cantilever axis with additional slide, the working stroke is reduced by the length of the additional slide and the distance between the two slides

L16 = Slide length  
L17 = Additional slide length  
L18 = Distance between the two slides  
[1] Additional slide

**Example:**  
Type ELCC-TB-KF-70-1500-...-ZR  
Working stroke without additional slide = 1500 mm  
L18 = 50 mm  
L17 = 356 mm  
Working stroke with additional slide = 1094 mm  
(1500 mm - 50 mm - 356 mm)
