Measuring modules CPX-CMIX

FESTO

Key features

At a glance

Movement and measurement in one, as an integral component of the valve terminal CPX – the modular peripheral system for decentralised automation tasks. The modular design means that valves, digital inputs and outputs, positioning modules, end-position controllers and measuring modules, as appropriate to the application, can be combined in almost any way on the terminal CPX.

Advantages:
- Pneumatics and electrics – movement and measurement on one platform
- Innovative measurement technology – piston rod drives, rodless drives, rotary drives
- Actuation via fieldbus
- Remote maintenance, remote diagnostics, web server, SMS and e-mail alerts are all possible via TCP/IP
- Modules can be quickly exchanged and expanded without altering the wiring

Retracting/advancing and measuring in one work step	Time and space-saving	Process reliability	Reduced system costs
Fully digital data acquisition and transmission means pneumatic cylinders can now be used as sensors. With very high repetition accuracy and incorporating both analogue and digital measuring sensors.	Electrical peripherals enable the highly efficient measuring module to be seamlessly and compactly integrated into existing control environments. The new component is tailored to a tried-and-tested system and is quick and easy to commission.	All process steps are measured and documented, which significantly improves quality. The adjustable contact force (via pressure regulator) also increases the precision of the "displacement sensor".	As with all modules in the electrical terminal CPX, easy functional integration in fieldbus/Ethernet networks is a matter of course.

Drives to use
Linear drives DGCI
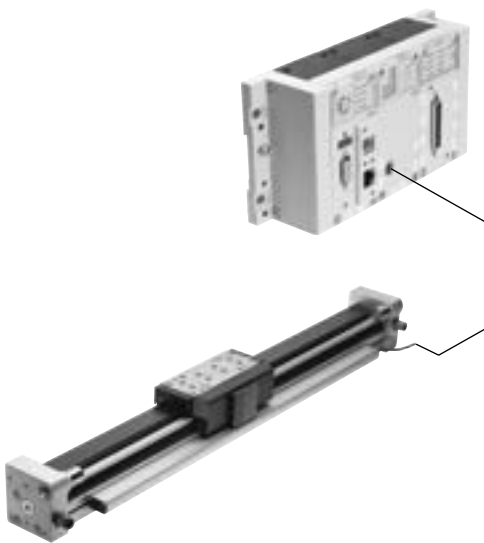

- The measuring signal of the linear drive DGCI supplies a CAN signal. This signal is read directly into the CPX-CMIX module
- The measuring system measures absolute values, in other words the actual position is immediately available for the controller after the system is switched on

| Technical data		
Linearity error[1]	[%]	< ±0.02, min. ±50µm
Resolution	[mm]	0.01
Repetition accuracy[2]	[mm]	±0.01/±0.02
Hysteresis	[ìm]	< 4
Max. temperature coefficient	[ppm/°K]	15
Smallest measurable speed	[mm/s]	10

1) Always refers to max. stroke.
2) Stroke ≤ 1000 mm/stroke > 1000 mm

Key features

Drives to use

Displacement encoder MME

- The measuring signal of the displacement encoder MME supplies a CAN signal. This signal is read directly into the CPX-CMIX module
- The measuring system measures absolute values, in other words the actual position is immediately available for the controller after the system is switched on
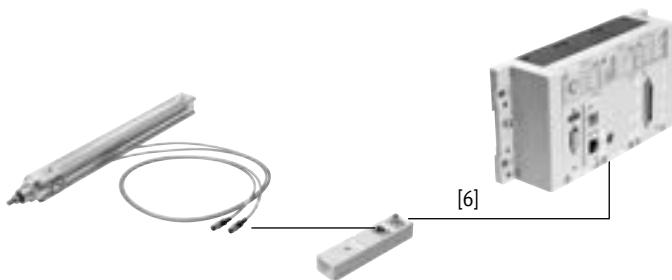

[9]

Technical data

Linearity error[1]	[%]	< ±0.01, min. ±40µm
Resolution	[mm]	0.01
Repetition accuracy[2]	[mm]	±0.01/±0.02
Hysteresis	[im]	< 4
Max. temperature coefficient	[ppm/°K]	15
Smallest measurable speed	[mm/s]	10

1) Always refers to max. stroke.
2) Stroke ≤ 1000 mm/stroke > 1000 mm

Linear drives DNCI

- The measuring signal of the linear drive DNCI is an incremental signal. This signal is converted to a CAN signal in the sensor interface CASM-S-D3-R7. The converted signal is then read into the CPX-CMIX module
- The measuring system does not measure absolute values, so must be homed after it is switched on. The actual position is available for the controller once this has been done
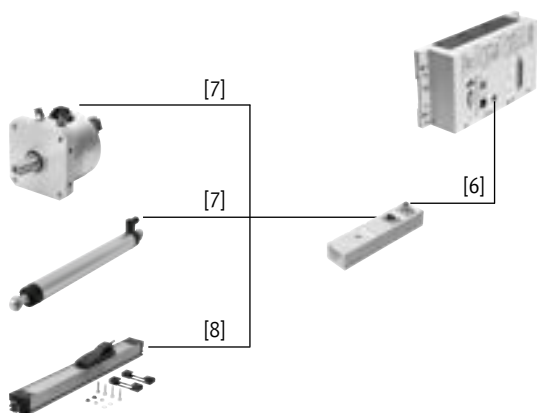

[6]

Technical data

Linearity error		
Strokes up to 500 mm	[mm]	< ±0.08
Strokes up to 1000 mm	[mm]	< ±0.09
Strokes over 1000 mm	[mm]	< ±0.11
Resolution	[mm]	0.01
Repetition accuracy	[mm]	< ±0.02
Hysteresis	[mm]	< 0.03
Smallest measurable speed	[mm/s]	10

Key features

Drives to use
Swivel modules DSMI or potentiometers MLO-POT

[7]

[7]

[8]

[6]

- The measuring systems supply an analogue measuring signal. This signal is converted to a CAN signal in the sensor interface CASM-S-D2-R3. The converted signal is then read into the CPX-CMIX module
- Potentiometers measure absolute values, in other words the actual position is immediately available for the controller after the potentiometer is switched on

Other potentiometers can be used, in which case the following must be noted:
- The connection resistance of the potentiometer must be 3 ... 20 kΩ
- Poorer potentiometer values for linearity and temperature coefficient will decrease the accuracy of the measured value
- A special cable must be used for connection to the sensor interface

Type codes and peripherals overview

Type codes

001	Series	
CPX-CMIX	Measuring module for electrical terminal	

003	Axes	
1	One	

002	Function module	
M1	Measuring unit	

Peripherals overview
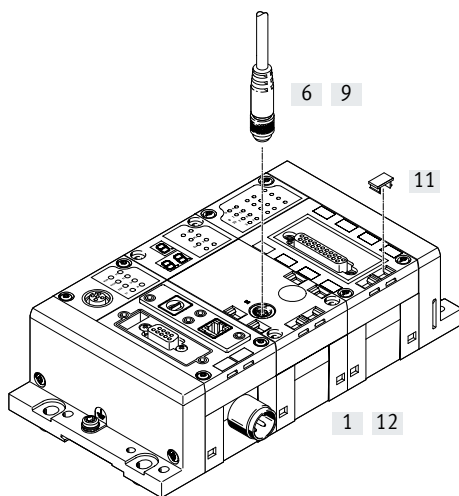

Accessories			
	Type	Description	→ Page/Internet
[1]	Measuring module CPX-CMIX	Integrated in the CPX terminal. Screws for mounting on the polymer interlinking block are included in the scope of delivery	6
[6]	Connecting cable KVI-CP-3	For connecting the measuring module CPX-CMIX and sensor interface CASM	8
[11]	Inscription label IBS	For labelling the modules	8
[12]	Interlinking block CPX-GE	Connects the individual modules. Two versions are available: polymer or metal interlinking block.	9
–	Screws CPX-M-M3	For mounting on the metal interlinking block	8
–	Connecting cable NEBC-P1W4-...	For connecting the sensor interface CASM and swivel module DSMI or potentiometer LWG	nebc
–	Connecting cable NEBC-A1W3-...	For connecting the sensor interface CASM and potentiometer TLF	nebc
[9]	Connecting cable NEBP-M16W6-...	For connecting the measuring module CPX-CMIX and displacement encoder MME	8

Data sheet

The measuring module CPX-CMIX is intended exclusively for use in valve terminals CPX.

General technical data			
Operating voltage			
Operating voltage range		[V DC]	18 … 30
Nominal operating voltage		[V DC]	24
Current consumption at nominal operating voltage		[mA]	80
Short circuit protection			Yes
Power failure buffering		[ms]	10
Number of axis strings			1
Axes per string			1
Length of connecting cable to axis		[m]	≤ 30
Max. number of modules			9
Display			7-segment display
Assigned addresses	Outputs	[bit]	6x8
	Inputs	[bit]	6x8
Diagnostics			Channel and module-oriented
			Via local 7-segment display
			Undervoltage of modules
			Undervoltage of measuring system
Status indication			Power load
			Error
Control interface			
Data			CAN bus with Festo protocol
			Digital
Electrical connection			5-pin
			M9
			Socket
Materials: housing			Reinforced PA
Note on materials			RoHS-compliant
Product weight		[g]	140
Dimensions	Length	[mm]	107
	Width	[mm]	50
	Height	[mm]	55

Data sheet

Operating and environmental conditions

Ambient temperature	[°C]	−5 ... +50
Relative humidity	[%]	5 ... 95, non-condensing
Degree of protection to IEC 60529		IP65

Connection and display components
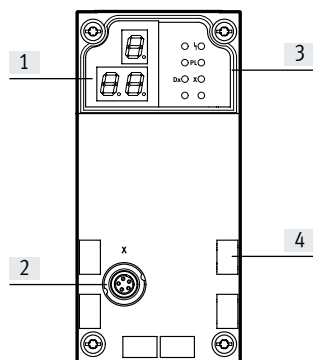

[1] 3-digit display
[2] Control interface
[3] Status LEDs
[4] Inscription labels

Pin allocation – Control interface

	Pin	Signal	Designation
	1	+24 V	Nominal operating voltage
	2	+24 V	Load voltage
	3	0 V	Ground
	4	CAN_H	CAN high
	5	CAN_L	CAN low
	Housing	Shielding	Cable shielding
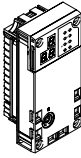

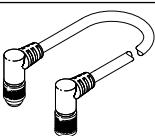

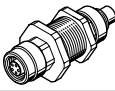

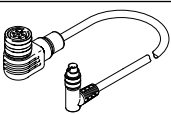

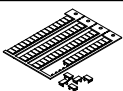

Permitted bus nodes/CEC

Bus node/CEC	Protocol	Max. number of CMIX modules
CPX-CEC...	–	9
CPX-FB6	INTERBUS	2
