

Linear drives SLM, with guide

FESTO

Key features

Design

The linear drive SLM is a combination of a slide unit and a rodless linear drive. The drive moves the slide. The movement is transferred via a magnetic coupling. The modular system enables customised end-position cushioning and end-position sensing solutions.

Basic unit

SLM-....-G

SLM-....-GL

with hollow guide rods

SLM-....-GU

with hollow guide rods, air diverting plate and supply port on one side

Standard unit

SLM-....-S

with two self-adjusting shock absorbers and two inductive proximity switches with PNP output

With stop plate

When using the stop plate at the front and/or rear, the stroke is reduced by at least the dimensions L5 and L13 for each side. If using a shock absorber or switching stop with proximity switch at the front and/or rear, the stroke is additionally reduced by at least dimension L2 per side.
