Linear drives DDLI, with integrated displacement encoder

FESTO

Product range overview

Function	Type	Description
Drives	**Rodless**	
	DDLI 	• Without guide • With displacement encoder for contactless measurement • Based on linear drive DGC-K • Supply ports on end face • System product for handling and assembly technology
	DGCI 	• With guide • With displacement encoder for contactless measurement • Based on linear drive DGC • Supply ports optionally on end face or front • System product for handling and assembly technology
	With piston rod	
	DNCI 	• With displacement encoder for contactless measurement • Various piston rod variants • Standards-based cylinder to ISO 15552
	DDPC 	• With displacement encoder for contactless measurement • Various piston rod variants • Standards-based cylinder to ISO 15552
	DNC/DSBC 	• With attached potentiometer MLO-LWG • Various piston rod variants • Standards-based cylinder to ISO 15552
Swivel module	**Swivel module**	
		• Based on swivel module DSM • Integrated rotary potentiometer • Compact design • Wide range of mounting options

Product range overview

Piston diameter	Stroke/swivel angle [mm/°]	Suitable for positioning with CPX-CMAX	for end-position controller CPX-CMPX	for end-position controller SPC11	for use as a measuring cylinder

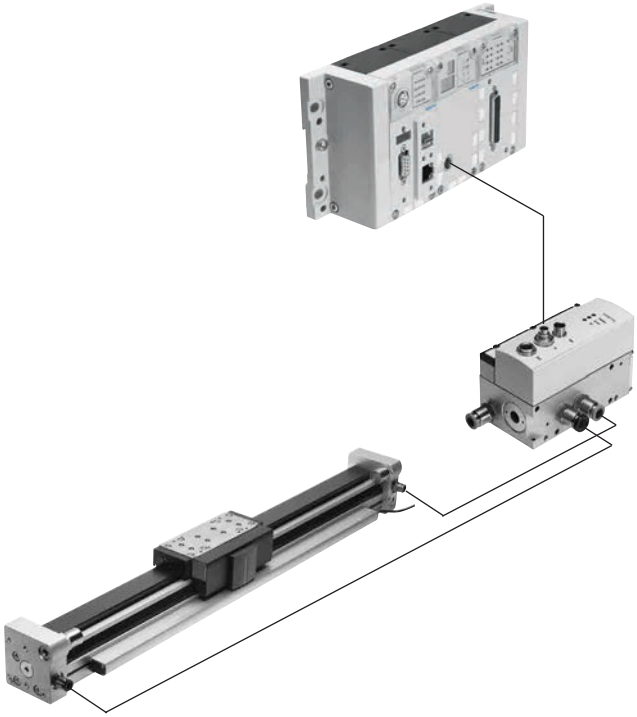
Key features

Servo-pneumatic drive technology

Positioning and Soft Stop applications as an integral component of the valve terminal CPX – the modular peripheral system for decentralised automation tasks. The modular design means that valves, digital inputs and outputs, positioning modules and end-position controllers, as appropriate to the application, can be combined in almost any way on the CPX terminal.

Advantages:
- Pneumatics and electrics – control and positioning on one platform
- Innovative positioning technology – piston rod drives, rodless drives, rotary drives
- Actuation via fieldbus
- Remote maintenance, remote diagnostics, web server, SMS and e-mail alerts are all possible via TCP/IP
- Modules can be quickly exchanged and expanded without altering the wiring



Axis controller CPX-CMAX

Free choice:
Position and force control, directly actuated or selected from one of 128 configurable position sets.
If you are looking for something more:
The configurable record sequencing function enables simple functional sequences to be realised in the axis controller CPX-CMAX.
Everything is recognisable:
The auto-identification function identifies each participant with its device data on the controller CPX-CMAX.

Also included:
Actuation of a brake or clamping unit via the proportional directional control valve VPWP is also part of the scope of performance of the controller CPX-CMAX.
Up to 8 modules (max. 8 axes) can be operated in parallel and independently of each other.
Commissioning via FCT (Festo configuration software) or via fieldbus:
no programming, only configuration.

Advantages:
- Greater flexibility
- OEM friendly – commissioning also via fieldbus
- Easy installation and fast commissioning
- Cost-effective
- You program the system in your PLC environment

Key features

End-position controllers CPX-CMPX

Data sheets ➔ Internet: cpx-cmpx

Fast travel between the mechanical end stops of the cylinder, stopping gently and without impact in the end position.
Fast commissioning via control panel, fieldbus or handheld unit.
Improved standstill control.
Actuation of a brake or clamping unit via the proportional directional control valve VPWP is an integral part of the controller CMPX.

Depending on the fieldbus chosen, up to 9 end-position controllers can be actuated on the CPX terminal.
All system data can be read and written via the fieldbus, including, for example, the mid-positions.

Advantages:
- Greater flexibility
- OEM friendly – commissioning also via fieldbus
- Easy installation and fast commissioning
- Cost-effective
  - Up to 30% faster cycle rates
  - Significantly reduced system vibration
- Improved work ergonomics thanks to significantly reduced noise level
- The extended diagnostics help to reduce the service time of the machine

Proportional directional control valve VPWP

Data sheets ➔ Internet: vpwp

The 5/3-way proportional directional control valve for applications with Soft Stop and pneumatic positioning.
Fully digitalised – with integrated pressure sensors, with new diagnostic functions.
In sizes 4, 6, 8 and 10.
Flow rates of 350, 700, 1400 and 2000 l/min.

With switching output for controlling a brake.
Colour-coded supply ports.
Pre-assembled cables guarantee faultless and fast connection with the controllers CPX-CMPX and CPX-CMAX.

Advantages:
- Easy installation and fast commissioning
- Reduction of system downtimes thanks to the new diagnostic options
- With switching output for controlling a brake/clamping unit

Measuring module CPX-CMIX

Data sheets ➔ Internet: cpx-cmix

Fully digital data acquisition and transmission means that pneumatic cylinders can be used as sensors. With very high repetition accuracy and incorporating both analogue and digital measuring sensors.

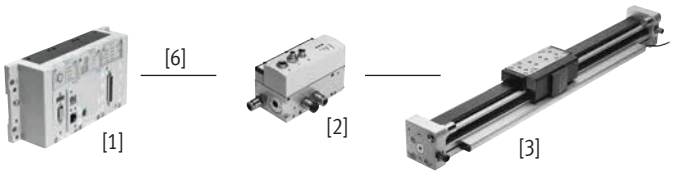
Suitable for the linear drive DGCI with displacement encoder for measuring absolute values, for the piston rod drive DNCI/DDPC with incremental displacement encoder or alternatively for a potentiometer of the type MLO.

Advantages:
- All process steps can be documented, which improves quality
- An adjustable contact force (via pressure regulator) increases the precision of the "displacement sensor"
- With displacement encoders for measuring absolute values, the actual position is immediately available after the system is switched on

Drive options

System with linear drive DDLI, DGCI

Data sheets ➔ Internet: ddli or dgci



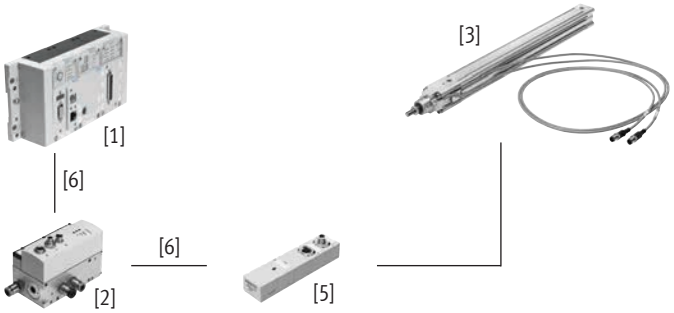
[1] Controller module CPX-CMPX or CPX-CMAX
[2] Proportional directional control valve VPWP
[3] Linear drive DDLI, DGCI with displacement encoder
[6] Connecting cable KVI-CP-3-...

- Pneumatic rodless linear drive with displacement encoder, with or without recirculating ball bearing guide
- Displacement encoder with absolute and contactless measurement
- Diameter:
  – With DGCI: 18 ... 63 mm
  – With DDLI: 25 ... 63 mm
- Stroke: 100 ... 2000 mm in fixed lengths
- Range of applications: Soft Stop and pneumatic positioning
- Loads from 1 ... 180 kg
- No sensor interface required

Advantages:
- Complete drive unit
- DDLI for easy connection to the customer's guide system
- Excellent running characteristics
- For fast and accurate positioning up to ±0.2 mm (only with axis controller CPX-CMAX)

System with standards-based cylinder DNCI, DDPC

Data sheets ➔ Internet: dnci



[1] Controller module CPX-CMPX or CPX-CMAX
[2] Proportional directional control valve VPWP
[3] Standards-based cylinder DNCI, DDPC with displacement encoder
[5] Sensor interface CASM-S-D3-R7
[6] Connecting cable KVI-CP-3-...

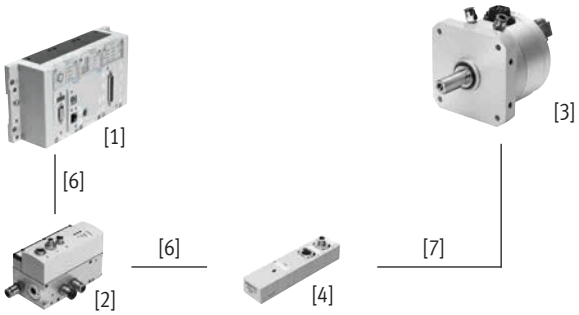
- Standards-based cylinder with integrated displacement encoder, conforms to DIN ISO 6432, VDMA 24 562, NF E 49 003.1 and Uni 10 290
- Displacement encoder with contactless and incremental measurement
- Diameter: 32 ... 100 mm
- Stroke: 100 ... 750 mm
- Range of applications: Soft Stop and pneumatic positioning
- Loads from 3 ... 450 kg and the corresponding sensor interface CASM-S-D3-R7
- Pre-assembled cables guarantee faultless and fast electrical connection

Advantages:
- Compact drive unit
- Can be used universally
- Also with guide unit
- For fast and accurate positioning up to ±0.5 mm (only with axis controller CPX-CMAX)

Drive options

System with swivel module DSMI

Data sheets ➔ Internet: dsmi



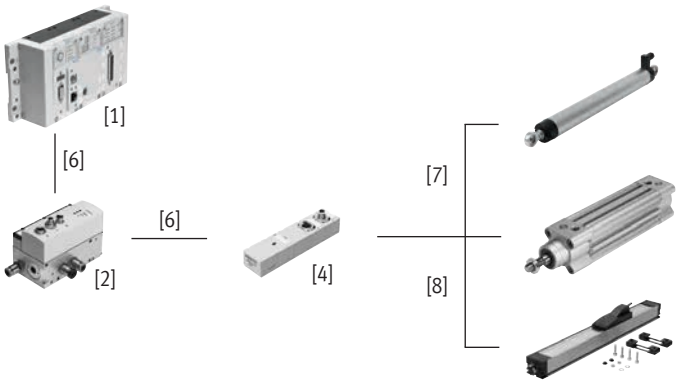
[1] Controller module CPX-CMPX or CPX-CMAX
[2] Proportional directional control valve VPWP
[3] Swivel module DSMI with displacement encoder
[4] Sensor interface CASM-S-D2-R3
[6] Connecting cable KVI-CP-3-...
[7] Connecting cable NEBC-P1W4-K-0.3-N-M12G5

- Swivel module DSMI with integrated displacement encoder
- Identical design to pneumatic swivel module DSM
- Absolute displacement encoder based on a potentiometer
- Swivel range from 0 ... 270°
- Size: 25, 40, 63
- Max. torque: 5 ... 40 Nm
- Range of applications: Soft Stop and pneumatic positioning
- Mass moments of inertia of 15 ... 6000 kgcm^2 and the corresponding sensor interface CASM-S-D2-R3
- Pre-assembled cables guarantee faultless and fast connection to the proportional directional control valve VPWP

Advantages:
- Complete drive unit, compact, can be used immediately
- High angular acceleration
- With adjustable fixed stops
- For fast and accurate positioning down to ±0.2° (only with axis controller CPX-CMAX)

System with potentiometer

Data sheets ➔ Internet: casm



[1] Controller module CPX-CMPX or CPX-CMAX
[2] Proportional directional control valve VPWP
[4] Sensor interface CASM-S-D2-R3
[6] Connecting cable KVI-CP-3-...
[7] Connecting cable NEBC-P1W4-K-0.3-N-M12G5
[8] Connecting cable NEBC-A1W3-K-0.4-N-M12G5

- Attachable potentiometers with absolute measurement, with high degree of protection
- With connecting rod or moment compensator
- Measuring range:
  Connecting rod: 100 ... 750 mm
  Moment compensator:
  225 ... 2000 mm
- Pre-assembled cables guarantee faultless and fast connection with the sensor interface CASM
- Range of applications: Soft Stop and pneumatic positioning with cylinder diameters of 25 ... 80 mm
- Loads from 1 ... 300 kg

Advantages:
- Easy installation and fast commissioning
- Cost-effective
- Can also be used in harsh ambient conditions
- Variety of drives: CPX-CMPX and CPX-CMAX also support cylinders with external displacement encoder

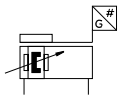
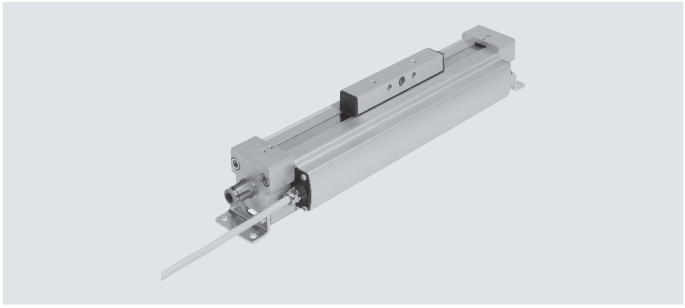
Data sheet



www.festo.com



- Diameter
  25 ... 63 mm
- Stroke length
  100 ... 2000 mm

General technical data					
Piston diameter		25	32	40	63
Design		Rodless linear drive with slide and displacement encoder			
Mode of operation		Double-acting			
Moment compensator principle		Slotted cylinder, mechanically coupled			
Mounting position		Any			
Type of mounting		Central support			
		Foot mounting			
		Direct mounting			
Cushioning		Elastic cushioning rings/pads at both ends			
Position sensing		Via integrated displacement encoder			
Measuring principle (displacement encoder)		Digital, magnetostrictive, contactless and absolute measurement			
Pneumatic connection[1]		G1/8		G1/4	G3/8
Stroke[2]	[mm]	100, 160, 225, 300, 360, 450, 500, 600, 750, 850, 1000, 1250, 1500, 1750, 2000			
Max. speed	[m/s]	3			

1) For pre-assembled push-in fittings, the tubing fittings ➔ page 15 apply
2) Note stroke reduction in combination with CPX-CMAX

Operating and environmental conditions					
Piston diameter		25	32	40	63
Operating pressure	[bar]	2 ... 8			1.5 ... 8
Operating pressure[1]	[bar]	4 ... 8			
Operating medium[2]		Compressed air to ISO 8573-1:2010 [6:4:4]			
Note on the operating/pilot medium		Operation with lubricated medium not possible Pressure dew point 10°C below ambient temperature/temperature of medium			
Ambient temperature	[°C]	–10 ... +60			
Vibration resistance to DIN/IEC 68 Part 2-6		At 10 ...60 Hz: 0.15 mm			
		At 60 ...150 Hz: 2G			
Continuous shock resistance to DIN/IEC 68, Part 2-27		Half sine 15 g, 11 ms			
CE marking (see declaration of conformity)[3]		To EU EMC Directive			
Certification		C-Tick			
Corrosion resistance class CRC[4]		1			

1) Only applies to applications with end-position controller CPX-CMPX, SPC11 and axis controller CPX-CMAX
2) The proportional directional control valve VPWP, MPYE used requires these characteristic values
3) For information about the area of use, see the EC declaration of conformity: www.festo.com/sp ➔ Certificates.
If the devices are subject to usage restrictions in residential, commercial or light-industrial environments, further measures for the reduction of the emitted interference may be necessary.
4) Corrosion resistance class CRC 1 to Festo standard FN 940070
Low corrosion stress. Dry indoor application or transport and storage protection. Also applies to parts behind coverings, in the non-visible interior area, and parts which are covered in the application (e.g. drive trunnions).

Data sheet

Forces [N] and impact energy [Nm]					
Piston diameter		25	32	40	63
Theoretical force at 6 bar		295	483	754	1870
Impact energy at the end positions		0.05	0.12	0.25	0.5

Positioning characteristics with axis controller CPX-CMAX					
Piston diameter		25	32	40	63
Mounting position		Any			
Resolution	[mm]	0.01			
Repetition accuracy		→ Page 15			
Minimum load, horizontal[1)]	[kg]	2	3	5	12
Maximum load, horizontal[1)]	[kg]	30	50	75	180
Minimum load, vertical[1)]	[kg]	2	3	5	12
Maximum load, vertical[1)]	[kg]	10	15	25	60
Min. travel speed	[m/s]	0.05			
Max. travel speed	[m/s]	3			
Typical positioning time, long stroke[2)]	[s]	0.6 5/1.00	0.6 5/1.05	0.7 0/1.05	1.0 5/1.2
Typical positioning time, short stroke[3)]	[s]	0.3 8/0.60	0.3 8/0.60	0.3 8/0.60	0.6 5/0.65
Minimum positioning stroke[4)]	[%]	≤ 3			
Stroke reduction[5)]	[mm]	25	25	35	35
Recommended proportional directional control valve					
For CPX-CMAX		→ Page 24			

1) Load = payload + load of all moving parts on the drive
2) At 6 bar, horizontal mounting position, DDLI-XX-1000, 800 mm positioning travel at min./max. load
3) At 6 bar, horizontal mounting position, DDLI-XX-1000, 100 mm positioning travel at min./max. load
4) In relation to the maximum stroke of the drive, but never more than 20 mm.
5) The stroke reduction must be maintained on each side of the drive, the max. positionable stroke is thus: stroke – 2x stroke reduction

Force control characteristics with axis controller CPX-CMAX					
Piston diameter		25	32	40	63
Mounting position		Any			
Maximum controllable force[1)]	[N]	266	435	679	1683
Typical friction forces[2)]	[N]	20	30	40	50
Repetition accuracy of pressure control[3)4)]	[%]	< ±2			

1) Advancing/retracting at 6 bar
2) These values can fluctuate greatly from cylinder to cylinder and are not guaranteed.
   These friction forces must also be taken into consideration when using an external guide or when the cylinder is moving other components subject to friction
3) This value defines the repetition accuracy with which the internal differential pressure in the cylinder, which corresponds to the prescribed force setpoint value, is controlled and refers to the maximum controllable force
4) The effective force at the workpiece and its accuracy depend largely on the friction in the system as well as the repetition accuracy of the internal control system. Note that friction forces always work against the direction of movement of the piston. The following formula can be used as a rule of thumb to approximate the force F at the workpiece:
   $F = F_{setpoint} \pm F_{friction\ forces} \pm$ repetition accuracy of pressure control

Data sheet

Positioning characteristics with Soft Stop end-position controller CPX-CMPX, SPC11					
Piston diameter		25	32	40	63
Mounting position		Any			
Repetition accuracy[1]	[mm]	±2			
Minimum load, horizontal[2]	[kg]	2	3	5	12
Maximum load, horizontal[2]	[kg]	30	50	75	180
Minimum load, vertical[2]	[kg]	2	3	5	12
Maximum load, vertical[2]	[kg]	10	15	25	60
Travel time		→ SoftStop engineering software: → www.festo.com			
Recommended proportional directional control valve					
For CPX-CMPX		→ Page 25			
For SPC11		→ Page 26			

1) One intermediate position. The accuracy in the end positions depends solely on the design of the end stops

2) Load = payload + load of all moving parts on the drive

Electrical data – Displacement encoder		
Output signal		Digital
Linearity error[1]	[%]	< ±0.02, min. ±50 µm
Max. travel speed	[m/s]	3
Degree of protection		IP67
CE marking (see declaration of conformity)		To EU EMC Directive[2]
Power supply	[V DC]	24 (±25%)
Current consumption	[mA]	Typically 100
Max. temperature coefficient	[ppm/°K]	15
Electrical connection		Cable with 5-pin plug, round type, M9
Cable length	[m]	1.5
Cable quality		Suitable for use with energy chains

1) Always refers to max. stroke.

2) For information about the area of use, see the EC declaration of conformity at: www.festo.com/sp → Certificates.
If the devices are subject to usage restrictions in residential, commercial or light-industrial environments, further measures for the reduction of the emitted interference may be necessary.

Data sheet

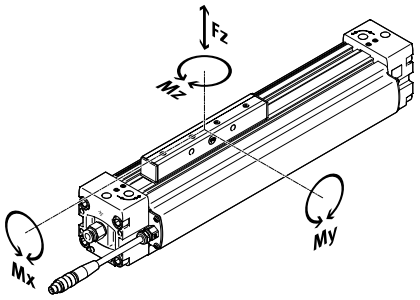
Characteristic load values

The indicated forces and torques refer to the surface of the slide.
These values must not be exceeded during dynamic operation. Special attention must be paid to the deceleration phase.



If the drive is subjected to two or more of the indicated forces and torques simultaneously, the following equation must be satisfied in addition to the indicated maximum loads:

$$0{,}4 \cdot \frac{F_{z1}}{F_{z2}} + \frac{M_{x1}}{M_{x2}} + \frac{M_{y1}}{M_{y2}} + 0{,}2 \cdot \frac{M_{z1}}{M_{z2}} \leq 1$$

$$\frac{F_{z1}}{F_{z2}} \leq 1 \qquad \frac{M_{z1}}{M_{z2}} \leq 1$$

F1/M1 = dynamic value
F2/M2 = maximum value

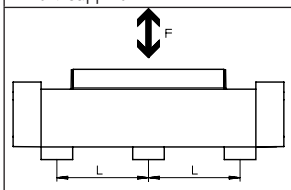
Permissible forces and torques

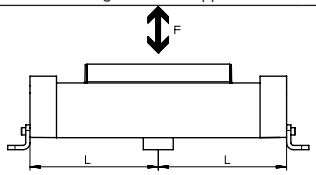
Piston diameter		25	32	40	63
$Fz_{max.}$	[N]	330	480	800	1600
$Mx_{max.}$	[Nm]	1.2	1.9	3.8	5.7
$My_{max.}$	[Nm]	20	40	60	150
$Mz_{max.}$	[Nm]	3	5	8	24

Data sheet

Number of central supports MUP as a function of overall length

Excessive distances between the central supports can reduce the positioning accuracy. The following table shows the required minimum number of central supports and foot mountings.

Stroke [mm]	Number of mounting components		
	Order code MA	Order code MF	
	Central support	Foot mounting + central support	
			




100 ... 400	2	2	0
401 ... 600	2	2	1
601 ... 1200	3	2	1
1201 ... 1400	3	2	2
1401 ... 2000	4	2	2

[1] NM For size 25: Entry "1NM" = delivery quantity 4 pieces

[2] AP Only with moment compensator T

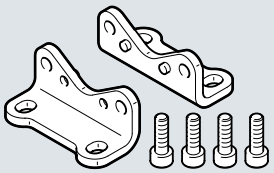
Accessories

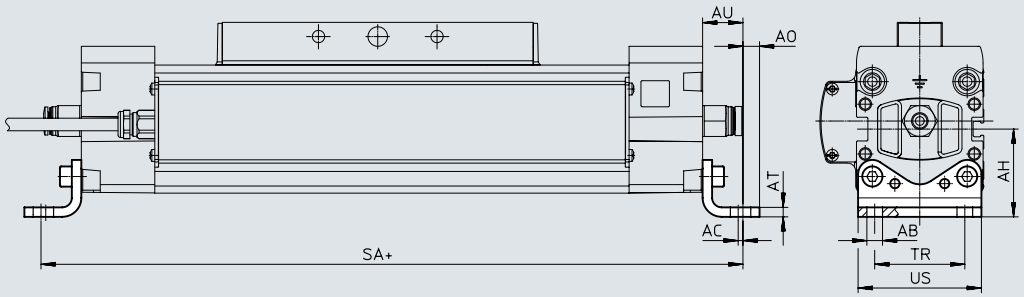
Foot mounting HP
(Order code: MF)

Material:
Galvanised steel

Free of copper and PTFE

Note
Central supports MUP are additionally required for strokes above 400 mm
➔ page 17
The foot mounting cannot be used when the bottom mounting position is used for the displacement encoder.





\+ plus stroke length
