

Linear drives DGC-K

FESTO

Festo core product range
Covers 80% of your automation tasks

Worldwide:

Always in stock

Superb:

Festo quality at an attractive price

Easy:

Simplified procurement and warehousing

Generally ready for dispatch from the factory within 24 hours
In stock at 13 Service Centres worldwide
More than 2200 products

Generally ready for dispatch from the factory within 5 days
Assembled for you in 4 Service Centres worldwide
Up to 6×10^{12} variants per product family

Just look
for the
star!

Characteristics

At a glance

- Without external guide, for simple drive functions
- Compact – installation length relative to stroke
- Fully interchangeable with the linear drive DGP
- Easy assembly and installation
- Choice of:
 - Standard piston
 - Extended piston
- Optional: NSF-H1 lubricant for the food area

Sealing system:

Advantages of the sealing system

- Long strokes with no restrictions
- Virtually no leakage

The linear drive is of limited suitability for the food area.

Additional information: www.festo.com/sp → Certificates

Guide variants

Compact design DGC-K

- Piston diameter 18 ... 80 mm
- Stroke lengths from 1 ... 8500 mm
- 30% narrower than the DGC-G
- Low moving dead weight
- Symmetrical design

Basic design DGC-G

- Piston diameter 8 ... 63 mm
- Stroke lengths from 1 ... 8500 mm
- Guide backlash = 0.2 mm
- For small loads
- Operating behaviour under torque load = average

Plain-bearing guide DGC-GF

- Piston diameter 18 ... 63 mm
- Stroke lengths from 1 ... 8500 mm
- Guide backlash = 0.05 mm
- For small and medium loads
- Operating behaviour under torque load = average

Recirculating ball bearing guide DGC-KF

- Piston diameter 8 ... 63 mm
- Stroke lengths from 1 ... 8500 mm
- Guide backlash = 0 mm
- For medium and large loads
- Precision mounting interface with stainless steel slide
- Operating behaviour under torque load = very good

Heavy-duty guide DGC-HD

- Piston diameter 18, 25, 40 mm
- Stroke lengths from 10 ... 5000 mm
- Guide backlash = 0 mm
- For large loads
- Operating behaviour under torque load = very good

Guide axis DGC-FA

- Without drive
- Piston diameter 8 ... 63 mm
- Stroke lengths from 1 ... 8500 mm
- Guide backlash = 0 mm
- Precision guide, suitable for DGC-KF. Can be used as machine component or as twin guide with DGC-KF

D2 – Compressed air supply port at both ends

The compressed air supply ports on the linear drive DGC-K are located on a connection cap as standard.

The linear drive is actuated at both ends by specifying order code D2 in the modular product system. Actuation at one end is then no longer possible.

Characteristics

Application examples

For opening and closing doors

For transporting glass plates

Peripherals overview

Accessories			
Type/order code	Description	→ Page/Internet	
[1] Adapter plate DAMF	Has the same interface as the moment compensator FKP for the linear drive DGP	30	
[2] Moment compensator DARD-...-M	For compensating misalignments when using external guides	28	
[3] Moment compensator FK (type: DARD-...-S)	For compensating misalignments when using external guides. Has the same interface as the moment compensator FKP for the linear drive DGP	26	
[4] Slot cover B/S	For protecting against contamination and securing the proximity sensor cable in place	32	
[5] Proximity sensor G/H/I/J/N	For sensing the position of the moment compensator	32	
[6] Connecting cable V	For proximity sensor	33	
[7] Slot nut for mounting slot Y (type: NST)	For mounting attachments In the case of piston diameter 18 and 25, cannot be used with DGC-...-D2 (compressed air supply port at both ends)	32	
[8] Slot nut for mounting slot Y (type: ABAN)	For mounting attachments In the case of piston diameter 18 and 25, possible with all combinations	32	
[9] Central support M	For mounting the axis, particularly for long stroke lengths	25	
[10] One-way flow control valve GRLA	For regulating speed	32	
[11] Foot mounting F	For mounting the axis	24

Data sheet

Influence of ferritic materials on proximity sensors

Ferritic materials (steel parts or sheet metal) in the immediate vicinity of the proximity sensors can cause sensing malfunctions. The following safety distances must be observed.

The distance depends on the position of the proximity sensor (see [1] and [2]).

Piston diameter 18/25

Position		L1	L2	L3	L4
Piston diameter 18					
[1]	[mm]	0	10	30	0
[2]	[mm]	0	10	0	30
[3]	[mm]	0	30	10	10
Piston diameter 25					
[1]	[mm]	0	0	10	0
[2]	[mm]	0	0	0	10
[3]	[mm]	0	10	0	0

Piston diameter 32 ... 80

Position		L1	L2	L3	L4
Piston diameter 32					
[1]	[mm]	0	0	10	0
[2]	[mm]	0	0	0	10

[2]	[mm]	0	0	0	10
[4] and [5]	[mm]	10	0	0	0

Data sheet

Characteristic load values

The indicated forces and torques refer to the surface of the slide.

These values must not be exceeded during dynamic operation. Special attention must be paid to the deceleration phase.

If the drive is simultaneously subjected to several of the forces and torques indicated below, the following equations must be satisfied in addition to the indicated maximum loads:

$$0,4 \cdot \frac{F_{z1}}{F_{z2}} + \frac{M_{x1}}{M_{x2}} + \frac{M_{y1}}{M_{y2}} + 0,2 \cdot \frac{M_{z1}}{M_{z2}} \leq 1$$

$$\frac{F_{z1}}{F_{z2}} \leq 1 \quad \frac{M_{z1}}{M_{z2}} \leq 1$$

F1/M1 = dynamic value

F2/M2 = maximum value

Permissible forces and torques

Data sheet

Maximum permissible piston speed v as a function of payload m and distance $r_{\max}$ from the centre of mass

These specifications represent the maximum values that can be achieved.
In practice, these values can fluctuate relative to the position of the payload and mounting position.

Operating range of the cushioning

The end-position cushioning must be adjusted to ensure jerk-free operation. If the operating conditions are outside the permissible range, the moving mass must be cushioned using suitable equipment (external shock absorbers), preferably at the centre of mass.

Piston diameter	18	25	32	40	50	63	80
Distance $r_{\max}$ [mm]	14	40	40	40	40	40	40

Data sheet

Number of central supports MUP as a function of weight force F and distance l between supports

The drive may need to be supported to limit the deflection in the case of large strokes. The following graphs are provided to determine the maximum permissible distance between supports as a function of the mounting position and the applied weight and normal forces.

Mounting position
Horizontal

— DGC-K-18
 DGC-K-25
 --- DGC-K-32
 - · - · - DGC-K-40

— DGC-K-50
 DGC-K-63
 --- DGC-K-80

Vertical

Example:

The drive DGC-K-25-1500 is subjected to a force of 200 N in a horizontal mounting position.

The drive has an overall length of:
 l = stroke length + L1 (see dimensions)
 = 1500 mm + 200 mm
 = 1700 mm

According to the graph, the max. distance between supports for the drive DGC-K-25 with a force of 200 N is 1450 mm.

In this example, central supports are required as the max. distance between supports (1450 mm) is smaller than the overall length of the drive (1700 mm).

1) This central support cannot be ordered using order code M in the modular product system.

2) Suitable for ATEX

Accessories

Moment compensator DARD-S
(order code: FK)

Materials:
Bolt: high-alloy steel

Clevis: high-alloy steel
Sliding piece: brass

Retaining ring: spring steel

The moment compensator DARD-S has the same interface as the moment compensator FKP for the linear drive DGP. Use the moment compensator DARD-M in servo-pneumatic systems.

Note: Compensation possible in direction of arrow.
