

Linear drives DLGF

FESTO

Key features

At a glance

- Very flat, rodless drive
- Enabling very space-saving installation
- Three pneumatic connection options:
 - At the left
 - At the right
 - At both ends
 - Alternatively, also from below
- Two cushioning types can be selected:
 - PPS cushioning
 - External hydraulic shock absorbers
- Loads and devices can be directly mounted on the slide
- For DLGF-KF: two complete customer interfaces
→ page 13

Comparison of linear drive DLGF and linear drive DGC

Recirculating ball bearing guide DLGF-KF

- Piston diameter 20 ... 40 mm
- Stroke lengths from 50 ... 1000 mm
- For small and medium loads
- Operating behaviour under torque load = very good
- Much smaller installation dimensions (approx. -46%)

Recirculating ball bearing guide DGC-KF

- Piston diameter 8 ... 63 mm
- Stroke lengths from 1 ... 8500 mm
- Guide backlash = 0 mm
- For medium and large loads
- Operating behaviour under torque load = very good

Basic design DLGF-G

- Piston diameter 20 ... 40 mm
- Stroke lengths from 50 ... 1000 mm
- Low moving dead weight
- Much smaller installation dimensions (approx. -42%)

Compact design DGC-K

- Piston diameter 18 ... 80 mm
- Stroke lengths from 1 ... 8500 mm
- Low moving dead weight
- Symmetrical design

Option 2:

- [8] Slide moves to the left
- [7] Slide moves to the right

Connection variants from below

Suitable O-rings:

- For piston diameter 20: $\varnothing 5 \times 2$
- For piston diameter 25: $\varnothing 12 \times 2$
- For piston diameter 32: $\varnothing 12 \times 2$
- For piston diameter 40: $\varnothing 16 \times 2$

Profile design

With mounting holes

- In the end cap: yes
- In the profile: yes

Without mounting holes

- In the end cap: yes
- In the profile: no

The maximum support spacing is 300 mm. For longer strokes, the drive must be supported accordingly.

Key features

Easy preassembly of the proximity switches

The magnet [1] for sensing the slide position is located in the centre of the slide. The cross [2] on the proximity switch SMT-8M-A marks the position of the switching point. The switching point is set when both locations are at the same level [3].

Influence of ferritic materials on proximity switches

Ferritic materials (steel parts or panels) in the immediate vicinity of the proximity switches can cause sensing malfunctions. The following safety distances must be observed.

No ferritic materials should be used in the shaded area [1].

Piston diameter	B1	H1
20	22	8
25	22	8
32	27	13
40	27	13

Possible installation variants

With profile mounting DAMH-L8-P

Slide on left

Slide at top

Slide on right

Key features

Possible installation variants

With profile mountings DAMH-L8-PL and DAMH-L8-P

Application example:

Simple implementation of an intermediate position using two linear drives DLGF "back to back"

[1] Both linear drives are in the initial position on the right. The stopper cylinder on the slide of the linear drive on the left is normally extended and thus locks the slide of the right-hand linear drive.

[2] The linear drive on the right is supplied with compressed air and takes the drive on the left with it as it moves. On reaching the end position of the linear drive on the right, the intermediate position is approached.

[3] By supplying compressed air to the stopper cylinder, the two slides are released. The linear drive on the left is then supplied with compressed air and moves to its end position.

Key features

Possible installation variants

Number of matching mounting holes on the cover to attach the profile mountings DAMH-L8-PL

For piston diameter 20, 25, 32

Data sheet

Weights [g]

Piston diameter	20	25	32	40
Basic weight with 0 mm stroke	1015	1640	2829	5585
Additional weight per 10 mm stroke	35.5	45.5	69.4	105.5
Moving mass	566	998	1622	3300

Materials

Sectional view

Linear drive

[1] Cover	Coated die-cast aluminium
[2] Seals	NBR
	TPE-U(PU)
[3] Housing	Anodised aluminium
Note on materials	Free of copper and PTFE
	RoHS-compliant

Direct mounting

In order to avoid strain, the drive must be mounted at varying intervals depending on the length. The maximum support spacing is 300 mm.

Appropriate support should therefore also be used for the variant without mounting holes (feature W).

Stroke [mm]	Number of pairs of screws			
	DLGF-20	DLGF-25	DLGF-32	DLGF-40

650 ... 750	4	4	4	5
800 ... 1000	5	5	5	5

Data sheet

Characteristic load values

The indicated forces and torques refer to the centre of the slide surface. These values must not be exceeded during dynamic operation. Special attention must be paid to the deceleration phase.

If the drive is simultaneously subjected to several of the forces and torques indicated below, the following equation must be satisfied in addition to the indicated maximum loads:

$$f_v = \frac{|F_{y1}|}{F_{y2}} + \frac{|F_{z1}|}{F_{z2}} + \frac{|M_{x1}|}{M_{x2}} + \frac{|M_{y1}|}{M_{y2}} + \frac{|M_{z1}|}{M_{z2}} \leq 1$$

F₁/M₁ = dynamic value
 F₂/M₂ = maximum value

Permissible forces and torques					
Piston diameter		20	25	32	40
F _y max.	[N]	600	1000	1300	1700
F _z max. +	[N]	400	700	950	1150
F _z max. -	[N]	700	1200	1600	2000
M _x max.	[Nm]	5.4	12.3	30	54
M _y max.	[Nm]	15	30	50	90
M _z max.	[Nm]	15	30	50	90

Maximum permissible speed v as a function of payload m

With PPS cushioning

With shock absorber DYSS

Piston diameter		20	25	32	40
Operating pressure	[bar]	2 ... 8		1.5 ... 8	
Operating medium		Compressed air to ISO 8573-1:2010 [7:-:-]			
Note on operating/pilot medium		Lubricated operation possible (in which case lubricated operation will always be required)			
Ambient temperature	[°C]	0 ... 60			
Corrosion resistance CRC ¹⁾		1			

1) Corrosion resistance class CRC 1 to Festo standard FN 940070
Low corrosion stress. Dry internal application or transport and storage protection. Also applies to parts behind covers, in the non-visible interior area, and parts which are covered in the application (e.g. drive trunnions).

Forces and impact energy					
Piston diameter		20	25	32	40
Theoretical force at 6 bar	[N]	188	295	483	754
Impact energy in the end positions	[J]	0.17	0.27	0.44	0.69

Weights [g]				
Piston diameter	20	25	32	40
Basic weight with 0 mm stroke	590	957	1703	3234
Additional weight per 10 mm stroke	28.2	35.3	54.7	80.6
Moving mass	66	110	208	450

Data sheet

Operating range of the cushioning

The end-position cushioning is adjusted to ensure jerk-free operation. If the operating conditions are outside the permissible range, the moving mass must be cushioned using suitable equipment (external shock absorbers), preferably at the centre of gravity of the load.

The values apply to:

- Horizontal mounting position
- Payload at top

Piston diameter		20	25	32	40
Distance r_{max}	[mm]	6	6	8	8

Materials

Sectional view

Linear drive	
[1] Cover	Coated die-cast aluminium
[2] Seals	NBR
	TPE-U(PU)
[3] Housing	Anodised aluminium
Note on materials	Free of copper and PTFE
	RoHS-compliant

Direct mounting

In order to avoid strain, the drive must be mounted at varying intervals depending on the length. The maximum support spacing is 300 mm.

Appropriate support should therefore also be used for the variant without mounting holes (feature W).

Stroke [mm]	Number of pairs of screws			
	DLGF-20	DLGF-25	DLGF-32	DLGF-40
50 ... 150	2	2	2	2

350 ... 450	3	3	3	4
500 ... 600	4	4	4	4
650 ... 750	4	4	4	5
800 ... 1000	5	5	5	5

Data sheet

Characteristic load values

The indicated forces and torques refer to the centre of the moment compensator.

These values must not be exceeded during dynamic operation. Special attention must be paid to the deceleration phase.

$$0,4 \cdot \frac{F_{z1}}{F_{z2}} + \frac{M_{x1}}{M_{x2}} + \frac{M_{y1}}{M_{y2}} + 0,2 \cdot \frac{M_{z1}}{M_{z2}} \leq 1$$

$$\frac{F_{z1}}{F_{z2}} \leq 1 \quad \frac{M_{z1}}{M_{z2}} \leq 1$$

If the drive is simultaneously subjected to several of the forces and torques indicated below, the following equation must be satisfied in addition to the indicated maximum loads:

F_1/M_1 = dynamic value

F_2/M_2 = maximum value

Permissible forces and torques					
Piston diameter		20	25	32	40
$F_{z_{max.}}$	[N]	54	95	138	456
$F_{z_{max.}}$	[N]	98	164	276	662
$M_{x_{max.}}$	[Nm]	0.6	1.1	1.8	7.7
$M_{y_{max.}}$	[Nm]	2.2	4.5	7.6	37.6
$M_{z_{max.}}$	[Nm]	0.7	1.4	2.9	11.2

Maximum permissible speed v as a function of payload m

With PPS cushioning
