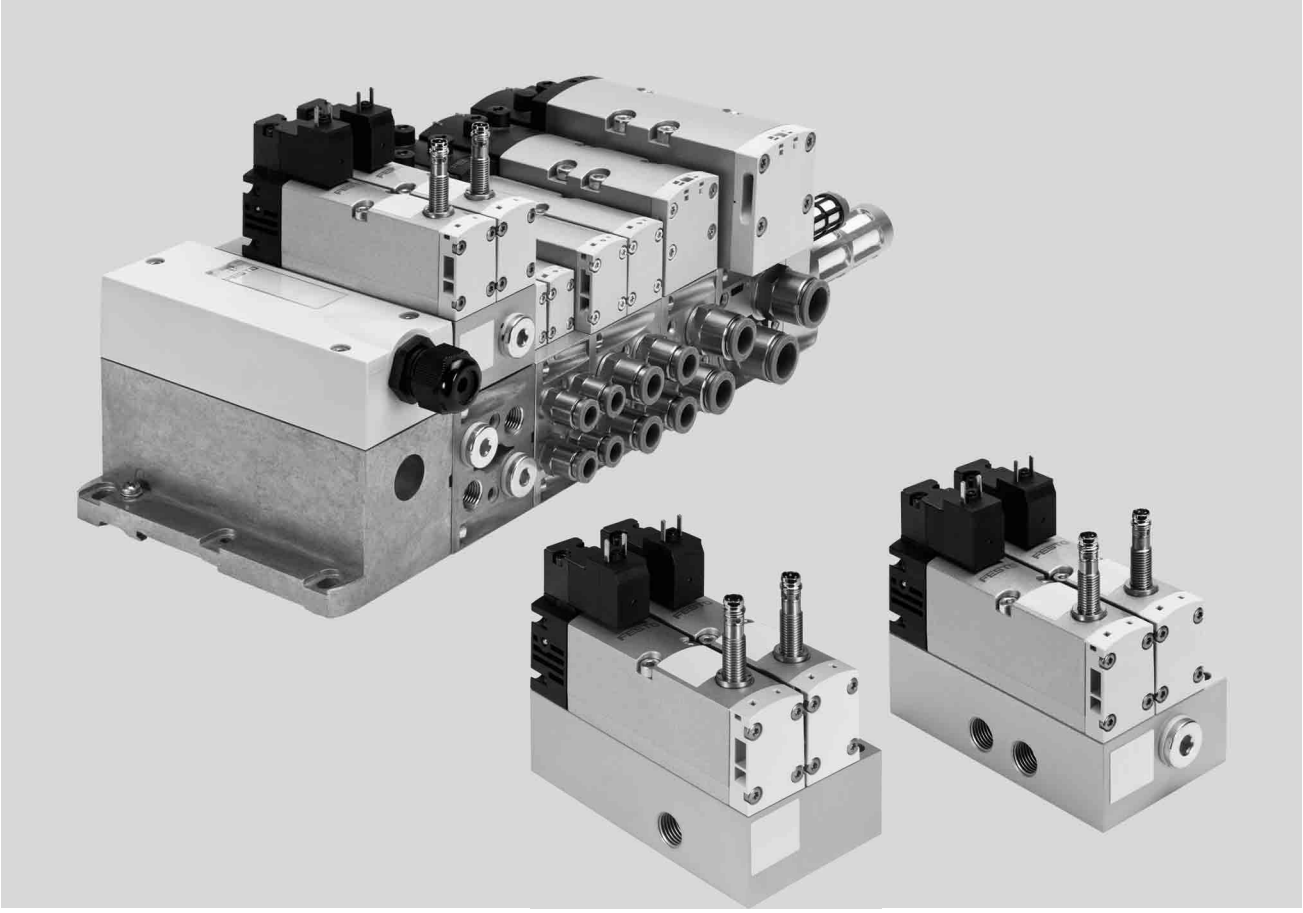
Control block VOFA with safety function

Control block VOFA with safety function

Key features



Innovative

- Can be used for safe reversing of a hazardous movement (5/2-way solenoid valve)
- Can be used for safe venting (3/2-way solenoid valve function, not available as a variant for installation on a valve terminal)
- Purely mechanical solution as a press safety valve, without integrated diagnostics

Versatile

- Control block can be selected as version for valve terminal VTSA/ VTSA-F
- Control block can be selected as individual pneumatic connection
- High pressure range of 3 ... 10 bar
- Flow rates of up to 1,050 l/min

Reliable

- Sturdy and durable metal components
- Designed as a purely mechanical solution with regard to safety

Easy to assemble

- Unit assembled and inspected, ready for installation
- Reduced outlay on selection, ordering, installation and commissioning
- Mounting via through-hole (with individual pneumatic connection)
- Mounting as vertical stacking elements on manifold sub-base of the valve terminal

Note

The control block with safety function VOFA must not be modified by the customer without authorisation as this invalidates the IFA approval certificate.
The IFA certificate is linked to the checked safety function of the component.

Control block VOFA with safety function

Key features

Description

The control block is designed for two-channel actuation of pneumatic drive components such as double-acting cylinders, and can be used to realise the following safety measures:

- Protection against unexpected start-up (EN 1037)
- Reversing hazardous movements, provided the reversing movement will not lead to any further hazards (5/2-way valve, single solenoid)
- Safe venting (with 3/2-way valve function in normally closed position)

The control attributes of the control block enable Performance Level e (up to Category 4, corresponds to the highest risk level) to be achieved for the safety measures. The Performance Level (PL) is a measure of the reliability of a safety function.
The control block has been developed and manufactured in accordance with the basic and proven safety principles of EN ISO 13849-1 and
EN ISO 13849-2.

The requirements of EN ISO 13849-1 and EN ISO 13849-2 (e.g. CCF, DC) must be taken into consideration for implementation and operation of the component and for use in higher categories (2 to 4).
When using this product in machines or systems subject to specific C standards, the requirements specified in these standards must be observed.

The control block with safety function is designed for installation in machines and automation systems and must only be used in industrial applications (high-demand mode).
The control block with safety function is suitable for use as a press safety valve to EN 692.

Further information and technical data in the Support Portal
➔ Internet: safety-related guidelines

Pneumatic/electrical interlinking

Function

The safety function is achieved through two-channel pneumatic interlinking of two 5/2-way single solenoid valves, width 26 mm, within the control block:

- Port 4 is only pressurised if both solenoid valves are in switching position.
- Port 2 is always pressurised if at least one of the two solenoid valves is in normal position. The valve is reset via a mechanical spring.

The switching operation of the solenoid valves can be sensed by a proximity sensor on the solenoid valves (switching position sensing). This is done by comparing a logic operation of the control signal and the signal change of the proximity sensor to check whether the piston spools of the solenoid valves achieve the expected position.

The piston spools of the solenoid valves are designed so that pneumatic short circuits between ports 2 and 4 are ruled out (overlap).

The two solenoid valves must be actuated via two separate channels to achieve the desired Category 4 (Performance Level e, to
EN ISO 13849-1).

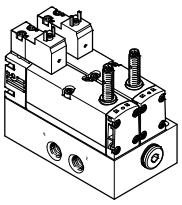
The valves used are always 5/2-way solenoid valves with switching position sensing.

Control block VOFA with safety function

Key features

Version

Decentralised individual connection variant, VOFA-L26-T52-...

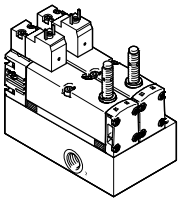


With the decentralised individual connection variant, the electrical connection for the control block is established as an individual connection to ISO 15407-1. The pneumatic connection is also established as an individual connection. With this variant, the two 5/2-way solenoid valves are pneumatically interlinked via two channels by means of the individual sub-base.

The electrical connection for the solenoid valves is established separately via a standardised square plug to EN 175301-803, type C.

The inductive sensor for switching position sensing is electrically connected using a push-in connector M8x1 to EN 61076-2-104.

Decentralised individual connection variant, VOFA-L26-T32C-...

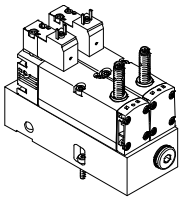


The function as a 3/2-way solenoid valve, normally closed, is intended for use for safe venting.

- Note

The 3/2-way solenoid valve function is only available as a decentralised individual connection variant (VOFA-L26-...).

Version for valve terminal VTSA/VTSA-F, VOFA-B26-T52-...



With the version of the control block for valve terminal VTSA/VTSA-F, the valves are actuated separately from the valve terminal via an individual electrical connection.
The pneumatic connection is established via the valve terminal VTSA/VTSA-F.

With the variant for valve terminals, the two 5/2-way solenoid valves are pneumatically interlinked via two channels by means of an intermediate plate as vertical stacking element.

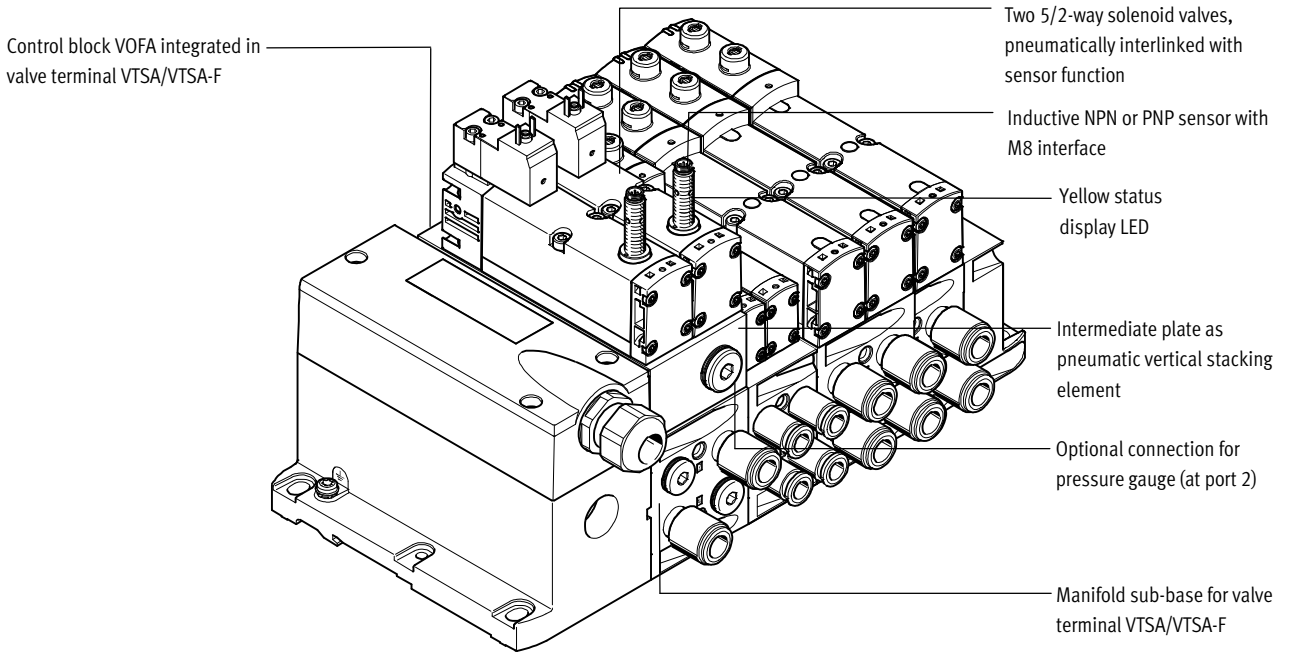
The electrical connection for the solenoid valves is established separately via a standardised square plug to EN 175301-803, type C.
The inductive sensor for switching position sensing is electrically connected using a push-in connector M8x1 to EN 61076-2-104.

- Note

The appropriate manifold sub-base VABV-S4- ..., which is required for integration into the valve terminal, is not part of the control block. It is automatically allocated by the configurator on selection of the control block.

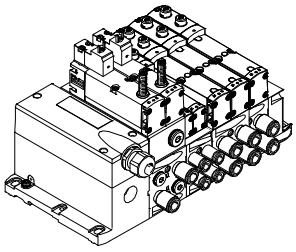
Control block VOFA with safety function

Key features



Equipment options

Control block, version for valve terminal VTSA/VTSA-F, VOFA-B26-T52-...



Two 5/2-way solenoid valves, single solenoid, connected in series, interlinked via two channels
- Mechanical spring
- Switching position sensing via inductive sensors with PNP or NPN output

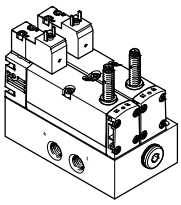
Application:
- Protection against unexpected start-up to EN 1037
- Safe reversing
- Drives in manually loaded devices

Note

The 3/2-way solenoid valve function is not suitable for vertical stacking (on valve terminals).

Control block as decentralised individual connection variant

VOFA-L26-T52-...



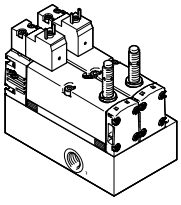
Two 5/2-way valves, single solenoid, connected in series, interlinked via two channels
- Mechanical spring
- Switching position sensing via inductive sensors with PNP or NPN output

Application:
- Protection against unexpected start-up to EN 1037
- Safe reversing (VOFA-L26-T52-...)
- Safe venting (VOFA-L26-T32C-... , 3/2-way solenoid valve function)
- Drives in manually loaded devices

Note

The control block with safety function VOFA must not be modified by the customer without authorisation as this invalidates the IFA approval certificate.
The IFA certificate is linked to the checked safety function of the component.

VOFA-L26-T32C-...



Control block VOFA with safety function

Key features

Special features

Control block for valve terminal VTSA/VTSA-F

Electrical connection

- Electrical connection to EN 175301-803, type C (square plug)
- 3-pin sensor push-in connector M8

Pneumatic connection

- Via valve terminal VTSA/VTSA-F
- Pilot air supply via valve terminal
- Interlinked via two channels by way of vertical stacking as intermediate plate

Control block as decentralised individual connection variant

Electrical connection

- Electrical connection to EN 175301-803, type C (square plug)
- 3-pin sensor push-in connector M8

Pneumatic connection

- Individual pneumatic connection
- Internal pilot air supply
- Interlinked via two channels by way of individual sub-base

Applications

This control block is suitable for use as a press safety valve to EN 692.

This valve is a safety device in accordance with the Machinery Directive 2006/42/EC.

The 3/2 way solenoid valve version (VOFA-L26-T32C-...) is intended for safe venting.

The version for valve terminal VTSA/VTSA-F and the version as individual connection variant VOFA-L26-T52-... are intended for safe reversing of a hazardous movement.

Valve terminal configurator

➔ Internet: www.festo.com

A valve terminal configurator is available to help you select a suitable valve terminal VTSA/VTSA-F.
The control block VOFA for the valve terminal is ordered using this valve terminal configurator.
This makes it much easier to order the right product.

The valve terminals are fully assembled according to your order specification and are individually checked. This reduces assembly and installation time to a minimum.

You can order a control block VOFA for the valve terminal VTSA using the order code:

Ordering system for VTSA
➔ Internet: vtsa

You can order a control block VOFA for the valve terminal VTSA-F using the order code:

Ordering system for VTSA-F
➔ Internet: vtsa-f

Control block VOFA with safety function

Key features

Valve function	
Circuit symbol[1)]	Description
	Control block VOFA-B26-T52-... As version for valve terminal VTSA/VTSA-F with 2x 5/2-way valve, single solenoid • Pneumatic connection via valve terminal • Mechanical spring return • With NPN sensor (code SN) or PNP sensor (code SP) • Fulfils the safety function – Safe reversing – Protection against unexpected start-up (EN 1037)
	Control block VOFA-L26-T52-... As decentralised individual connection variant with 2x 5/2-way valve, single solenoid • As individual pneumatic connection • Mechanical spring return • With NPN or PNP sensor • Fulfils the safety function – Safe reversing – Protection against unexpected start-up (EN 1037)
	Control block VOFA-L26-T32C-... As decentralised individual connection variant with 3/2-way solenoid valve function, normally closed (the two valves are pneumatically interlinked by means of the individual sub-base) • As individual pneumatic connection • Mechanical spring return • With NPN or PNP sensor • Fulfils the safety function – Safe venting – Protection against unexpected start-up (EN 1037)

1) The symbol represents a valve with a proximity sensor with a switching output signal, in the illustration an N/O contact. In accordance with ISO 1219-1, this symbol applies to both N/O contacts and N/C contacts. The switching element function of all sensors used here is an N/C contact.

Note

- The 2x 5/2-way solenoid valves each have their own electrical connection.
- The 2x 5/2-way solenoid valves are pneumatically interlinked via two channels by means of an individual sub-base/ intermediate plate.
- The output of the interlinked 2x 5/2-way solenoid valves is only switched if both valves are in switching position.

1) The control block with safety function can only be ordered via the valve terminal configurator and therefore does not have a separate part number.
2) Code letter within the order code for a valve terminal configuration.

Note

Silencer – Loss of safety function (VOFA -L26-T32C-...)
The addition of commercially available silencers can cause errors ranging from a reduction in exhaust performance to complete failure of the safety function.
In order to avoid such errors, proceed as follows:

- Use a silencer of type UO-1/4 or equivalent type
- Do not use sintered metal silencers
- When using a silencer, make sure the exhaust is unobstructed (exhaust outlet should have a minimum axial clearance of 15 mm)
- The silencer and exhaust (port 3) must not be blocked

Note

Sensors
The sensors contained in the valves must not be replaced by the customer. Incorrect assembly can result in malfunctions or damage to the valve.

Please contact Festo in the event of a malfunction.
