

Proportional pressure regulators VPPI

FESTO

Key features

Special characteristics

- Three predefined regulator presets, as well as the option of a custom preset
- The internal control electronics adjust automatically
- Low-noise
- Flexible
- Highly dynamic up to 30 Hz
- The max. frequency of 30 Hz protects the system

- Precise and stable: the powerful moving coil actuator also ensures that setpoint value changes are quick, easy and precise
- Lots of pressure ranges
- Pressure regulation range: -1 ... 12 bar
- PWM operation: the VPPI detects PWM signals generated by any machine controller

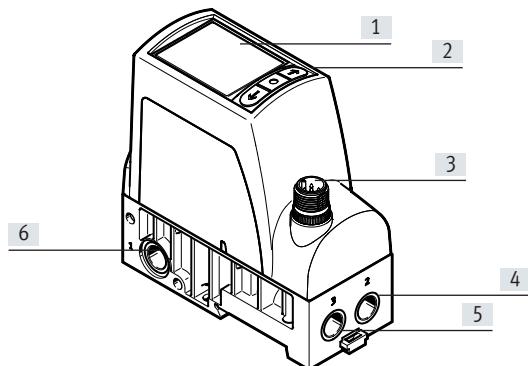

Function

The valve VPPI is a directly actuated proportional pressure regulator that uses two proportional 2/2-way valves as a basis.

The valve regulates a pneumatic pressure to an electronically defined value. This makes use of cascaded closed-loop control of pressure/travel and current.

Control is provided using an analogue current or voltage signal, or alternatively using a digital pattern for adjustable setpoint values, or using a PWM signal.

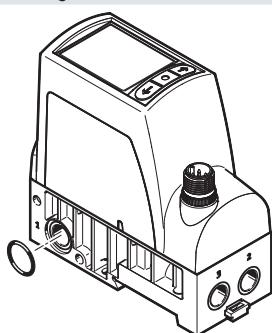

Design

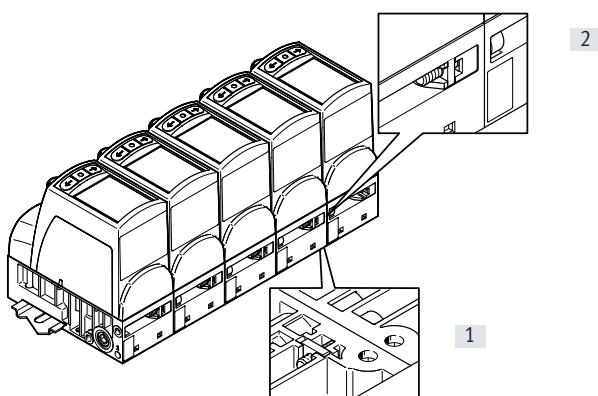

- [1] Display
- [2] Operating buttons display menu
- [3] Electrical connection, M12
- [4] Port 2, working air
- [5] Port 3, exhaust air
- [6] Port 1, compressed air

Mounting

Linking of valves

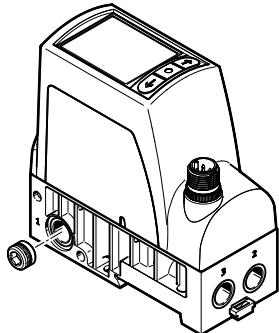

Up to five valves can be linked using connecting kit VAME-P18-K-P5. The connecting kit consists of two square nuts, two socket head screws and an O-ring.

- [1] The valves are connected on the underside using socket head screws and square nuts.
- [2] The valves are connected at the rear using socket head screws and square nuts.

Key features

Pressure zone separation

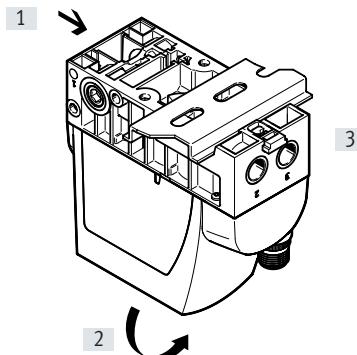

Linked valves can be divided into two pressure zones. To do this, duct 1 is closed on the corresponding side using a plug screw.

Plug screws for duct 1 can be ordered as accessories (VAME-P18-BP-G18-P5). In the case of pressure zone separation, there must be compressed air supply from both sides.

Mounting

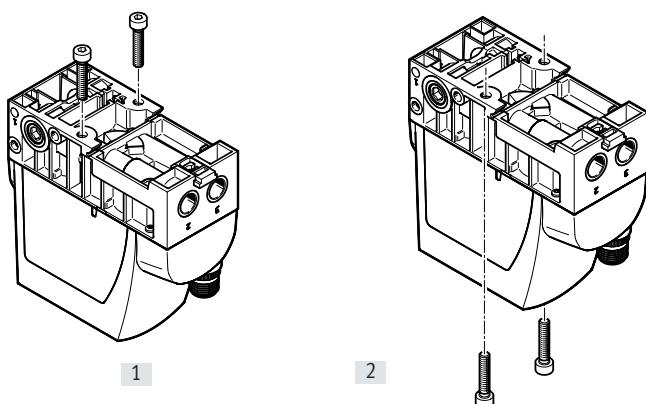

Via H-rail

The valve VPPI is hung onto the H-rail [1]. It is then pivoted onto the H-rail [2] and locked in place using the clamping element [3].

Linked valves are mounted on the H-rail in the same way. The clamping elements of the outer valves can be used to lock them in place.

Via the valve underside

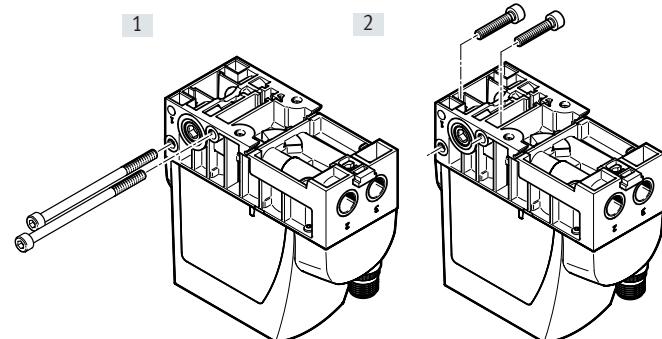

Individual mounting via the underside:

- [1] Mounting using screws M4 and square nuts
- [2] Mounting using screws M4

Linked valves are mounted on the valve underside in the same way. Only the two outermost screws are used for mounting.

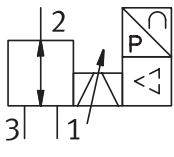

Via the side face

Individual mounting via side face:

- [1] Using through screws
- [2] Using internal screws

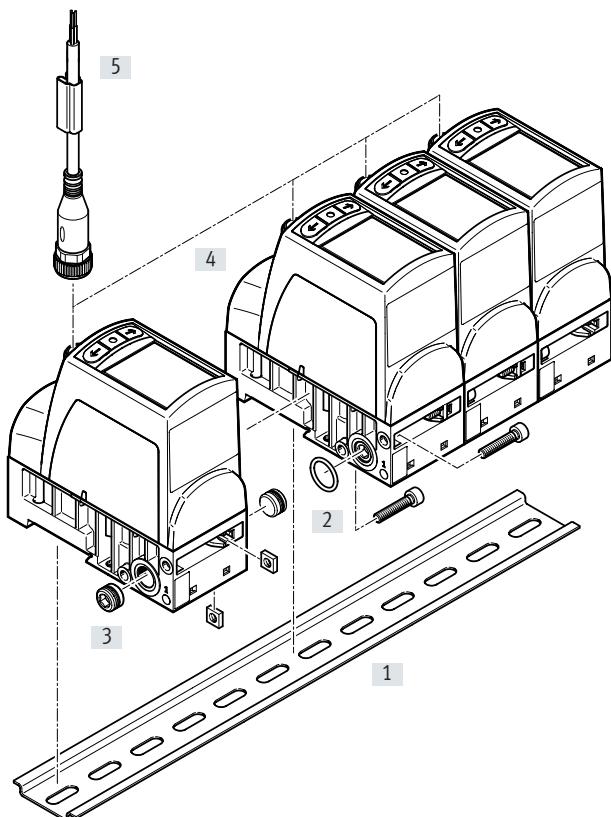

Product range overview
