

Stainless-steel cylinders

FESTO

Key features

Their applications	Our strength	The benefits to you	Good to know
<p>Reliable components need to be fully functional and operational, even in harsh operating conditions. The aim is to maximise availability of machinery while minimising downtimes. Stainless-steel cylinders are therefore used in applications where the surface finish of normal pneumatic drives would not be able to withstand the surrounding media. However, designing a corrosion-resistant system involves more than simply selecting a suitable steel: it also requires the selection of a matching concept for mounting components and accessories.</p>	<p>Festo's stainless-steel cylinders are characterised by resistant materials, such as 1.4301 and 1.4401. These popular high-alloy, stainless austenitic chrome-nickel and chrome-nickel-molybdenum steels protect against chemical or electrochemical stress as well as damage to the surface materials caused by cleaning agents or disinfectants. These groups of materials are particularly resistant to uniform surface corrosion and offer increased protection against pitting and crevice corrosion.</p>	<p>Festo's worldwide service network ensures optimum availability of stainless-steel cylinders. As well as a comprehensive range of standards-based cylinders to DIN ISO 15552 and 6432, we also offer a range of matching mounting components and accessories. The stainless-steel cylinders are assembled with grease that is compliant with NSF-H1 and wipers in accordance with BGVV (Federal Institute for Risk Assessment) guidelines. This means that they are suitable for use in the food area. We will be pleased to provide you with further information about future additions to our stainless-steel range. Just get in touch with us.</p>	<p>Our many years of experience in the area of stainless steel are invaluable when you are investigating solutions for harsh environments. Our experts will answer any questions you might have about surface finishes and chemical resistance.</p>

The atmosphere in the maturing cellar of a cheese factory consists of an unpleasant mix of ammonia, lactic acid and 98% humidity.

Key features

Resistance

Complete resistance to pitting and crevice corrosion is not always possible, even with ideal application parameters. The following parameters increase the pitting effect of chloride ions:

- Concentration of chloride ions
- Duration of contact
- Temperature
- Decreasing pH value

It must therefore be ensured during design, assembly and operation that all parts of the machinery can be properly cleaned to avoid an accumulation of chloride ions.

Selected sealing materials ensure very high resistance to a wide range of chemical compounds.

Further information on media resistance can be obtained on the Internet at www.festo.com.

In principle, we recommend that the cylinder be cleaned with the piston rod in the retracted position to avoid the risk of washing out the lifetime lubrication.

Various types of machinery contamination make cleaning processes necessary in many industry sectors. The degree of cleaning required ranges from wiping the machinery with a dry cloth to wet cleaning to foam cleaning with different exposure times and concentrations.

It is therefore impossible to make a general recommendation on compatibility.

Wet cleaning

Foam cleaning

-  - Note

The bearing cap on stocked parts is made of one piece.

When ordered using the modular product system, the bearing cap is made of two pieces, which makes it possible to exchange the wiper in the event of a repair.

Key features

Variants

CRDSNU Basic version	CRDSNU-S2: Through piston rod	CRDSNU-MQ: Short end cap without swivel mounting	CRDSNU-MG: Bearing cap without mounting thread
-------------------------	----------------------------------	--	---

Further variants

Symbol	Key features	Description
	S2 Through piston rod	For working at both ends, equal force in the forward and return stroke, for attaching external stops
	K2 Extended male piston rod thread	-
	K3 Female piston rod thread	-
	K5 Custom piston rod thread	Metric standard thread to ISO
	K8 Extended piston rod	-
	A1 Wiper variant	Increased chemical resistance
	A2 Wiper variant	Hard wiper: Cylinder with hard
	A3 Wiper variant	Unlubricated operation: Cleaning processes degrease the piston rod. A special piston rod seal permits a longer service life compared to the standard seal.
	TT Low temperature	Temperature resistance down to max. -40°C

Operating conditions

Operating medium	Compressed air to ISO 8573-1:2010 [7:4:4]
Note on the operating/ pilot medium	Lubricated operation possible (in which case lubricated operation will always be required)
Operating pressure ¹⁾ [bar]	1 ... 10
Food-safe ²⁾	→ Supplementary material information

1) An increase in the minimum operating pressure is possible with variants

2) Additional information www.festo.com/sp → Certificates.

Environmental conditions

Standards-based cylinders	Basic type/A3	A1	TT
Ambient temperature ¹⁾ [°C]	-20 ... +80	0 ... +80	-40 ... +80
Corrosion resistance class CRC			
Ø 32 ... 63	3 ²⁾		
Ø 80 ... 100	4 ³⁾		

1) Note operating range of proximity switches

2) Corrosion resistance class CRC 3 to Festo standard FN 940070

High corrosion stress. Outdoor exposure under moderate corrosive conditions. External visible parts with primarily functional surface requirements which are in direct contact with a normal industrial environment.

3) Corrosion resistance class CRC 4 to Festo standard FN 940070

Particularly high corrosion stress. Outdoor exposure under extreme corrosive conditions. Parts exposed to aggressive media, e.g. in the chemical or food industries. Such applications may need to be safeguarded by means of special testing (→ also FN 940082), using appropriate media.

Peripherals overview

Variant

CRDNG-S2

Peripherals overview

Mounting attachments and accessories	Description	CRDNG	CRDNGS	→ Page/Internet
[1] Flange mounting CRFNG	For bearing or end caps	■	–	51
[2] Self-aligning rod coupler CRFK	To compensate for radial and angular deviations	■	■	56
[3] Rod eye CRSGS	With spherical bearing	■	■	56
[4] Rod clevis CRSG	Permits a swivelling movement of the cylinder in one plane	■	■	56
[5] Foot mounting CRHNC	For bearing and end caps	■	–	49
[6] Trunnion flange CRZNG	For bearing and end caps in combination with trunnion supports CRLNZG	■	–	52
[7] Trunnion support CRLNZG	For supporting trunnion flange CRZNG	■	–	52
[8] Clevis foot CRLNG	For variant with swivel flange	–	■	53
[9] Proximity switch CRSMEO-4	With light emitting diode for switching status indication	■	■	56
[10] Mounting kit CRSMB	For proximity switches CRSMEO-4	■	■	57
[11] One-way flow control valve CRGRILA	For regulating speed	■	■	57
[12] Push-in fittings CRQS	For connecting tubing with standard O.D.	■	■	qs

Type codes

10 ... 2000 mm

Spare parts service

Variant

S2

S6

The variant S6 is not suitable for direct contact with food products because of the seals and the grease used.

Conforms to standard

- ISO 15552
- ISO 6431
- VDMA 24562

General technical data

Piston Ø	32	40	50	63	80	100	125

Design	Piston						
	Piston rod						
	Cylinder barrel						
Cushioning	Pneumatic cushioning, adjustable at both ends						
Cushioning length [mm]	20	20	23	23	30	30	40
Position sensing	Via proximity switch						
Type of mounting	With accessories						
	With female thread						
Mounting position	Any						

Operating and environmental conditions

Variant	CRDNG/CRDNGS	S6
Operating medium	Compressed air to ISO 8573-1:2010 [7:4:4]	
Note on the operating/pilot medium	Lubricated operation possible (in which case lubricated operation will always be required)	
Operating pressure	0.6 ... 10 bar	
Ambient temperature ¹⁾ [°C]	-20 ... +80	0 ... +120
Food-safe ²⁾	→ Supplementary material information	
Corrosion resistance class CRC ³⁾	4	

1) Note operating range of proximity switches

2) Additional information www.festo.com/sp → Certificates.

3) Corrosion resistance class CRC 4 to Festo standard FN 940070

Particularly high corrosion stress. Outdoor exposure under extreme corrosive conditions. Parts exposed to aggressive media, e.g. in the chemical or food industries. Such applications may need to be safeguarded by means of special testing (→ also FN 940082), using appropriate media.

Forces [N]

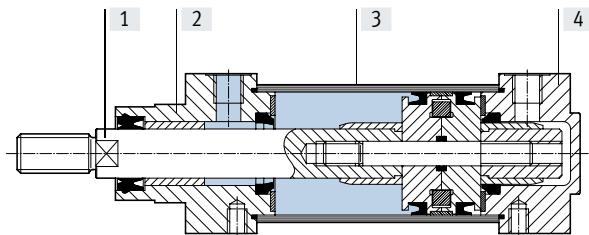

Piston Ø	32	40	50	63	80	100	125
Theoretical force at 6 bar, advancing	482	753	1178	1870	3015	4712	7360
Theoretical force at 6 bar, retracting	415	633	990	1682	2720	4418	6880

Data sheet
