

Mini slides EGSC-BS

FESTO

Key features

At a glance

- Four very compact sizes for precision positioning at speeds of up to 600 mm/s and a max. length of 200 mm
 - Recirculating ball bearing guide for yoke slide with high load bearing capacity
 - Integrated coupling for a compact design
 - Very high-quality ball screw drive with minimal internal friction
- Rigid, high load-bearing and precise linear guide for absorbing lateral forces and for increased protection against rotation
- Ring magnet for position sensing. For simple and low-cost position sensing

Compact

Optimum dimensions thanks to the integrated compact coupling and a very short slide

Flexible

Adapterless combination of ELGC and EGSC using the innovative “one size down” assembly system

Integrated

Simple position sensing with proximity sensor SMT-8M and integrated positioning magnet

Protected

The optional sealing air connection protects against immission and emission of particles.

Modular and flexible with motor, motor mounting kit and drive regulator

Motor

Servo motor

Stepper motor

Drive regulator

Servo drive

Motor controller for stepper motor

Motor mounting kit

Axial kit

Parallel kit

Simplicity in one unit

This product is also available as a product unit within the Simplified Motion Series:

- The Simplified Motion Series combines the simplicity of pneumatics with the benefits of electric automation. The perfect solution for all users who are looking for an electric alternative for very simple movement and positioning tasks, but don't want the commissioning process for traditional electric drive systems that can often be quite complex.
- Simplified functionality for simple movements between two end positions
- A variety of movements with different mechanical systems
- Integrated products eliminate the need for a control cabinet
- Quick and easy commissioning without software or special expertise
- Digital I/O and IO-Link integrated as standard

Key features

From the individual axis to the complete handling system

- The toothed belt and spindle axes ELGC and mini slide EGSC form a scalable modular system for compact automation
- The shared platform architecture creates a consistent range with matching interfaces. A large number of systems can be realised entirely without adapter plates
- Powerful drive and guide components ensure a long service life, as well as excellent load capacity and reliability
- The uniform and universal range of accessories reduces warehousing and design costs
- Two position sensing functions can be selected:
 - With magneto-resistive proximity sensors (detection via integrated magnets)
 - With inductive proximity sensors (detection through switch lug)

EGSC

Typical handling systems

For applications where compact dimensions are essential, the axes ELGC can be combined into very space-saving handling systems that are suitable in assembly systems, testing and inspection systems, small parts handling units, desk top applications and in the electronics industry. The very compact linear axes ELGC, mini slide EGSC and electric cylinder EPCC offer an optimal ratio between installation space and working space. They feature a common system approach and platform architecture and the connections are largely adapterless.

Cantilever system

	60	–	–	■	–
	80	–	–	–	■

With profile mounting EAHF-L2-....-P-D...

- Mounting option: base axis with one-size-down assembly axis

With angle kit EHAA-D-L2-....-AP

- Mounting option: base axis rotated through 90° with one-size-down assembly axis

**Matrix showing combinations between axis ELGC/ELGS-TB, ELGC/ELGS-BS, mini slide EGSC/EGSS-BS, electric cylinder EPCC/EPCS-BS and guide axis ELFC**

Assembly options with adapter kit

	Size	Assembly axis ELGC-BS/-TB; ELFC; EGSC-BS; EPCC-BS; ELGS-BS/-TB; EGSS-BS; EPCS-BS				
		25	32	45	60	80
Base axis ELGC-BS/-TB; ELFC; ELGS-BS/-TB	32	–	■	–	–	–
	45	–	–	■	–	–
	60	–	–	–	■	–
	80	–	–	–	–	■

With adapter kit EHAA-D-L2

- Mounting option: base axis with the same size assembly axis

- Mounting option: base axis with height adjustment to one-size-down assembly axis
- When motors are assembled using parallel kits, interfering contours may occur. In this case, the adapter plate is required for height compensation

Peripherals overview

Sealing air connection

Air is exchanged between the interior of the cylinder and the environment via a sealing air connection. This prevents negative pressure or excess pressure arising in the interior of the cylinder.

Additional functions of the connection:

- Application of slight negative pressure prevents emission of particles
- Application of slight overpressure prevents emission of particles

Suitable push-in fittings → Page 22

Peripherals overview

Accessories			
	Type/order code	Description	→ Page/Internet
[1]	Profile mounting EAHF-L2-...-P	For mounting the axis on the side of the profile. The profile mounting can be fixed in place on the mounting surface using the drill hole in the centre	20
[2]	Profile mounting EAHF-L2-...-P-S	For mounting the axis on the side of the profile	19
[3]	Centring pin/sleeve ZBS, ZBH	For centring loads and attachments	22
[4]	Sensor bracket EAPM-L2	For mounting the proximity sensors on the axis. The proximity sensors can only be mounted using the sensor bracket	21
[5]	Proximity sensor SIES-8M	Inductive proximity sensor, for T-slot	22
	Proximity sensor SMT-8M	Magnetic proximity sensor, for T-slot	22
[6]	Switch lug EAPM-...SLS	For sensing the slide position in conjunction with inductive proximity sensors SIES-8M	21
[7]	Axial kit EAMM-A	For axial motor mounting	17
[8]	Parallel kit EAMM-U	For parallel motor mounting	18
[9]	Motors EMME-AS, EMMS-ST	Motors specially matched to the axis, with or without brake	17

Note

For sizes 45 and 60, inductive proximity sensors SIES-8M must be used for strokes greater than 100 mm.

Data sheet

Dynamic characteristic load values

The indicated forces and torques refer to the centre of the guide.

These values must not be exceeded during dynamic operation.

Distance from the centre of the guide		25	32	45	60
Size		25	32	45	60
Dimension H13	[mm]	7.3	7.9	10.2	15.9
Dimension L6 ¹⁾	[mm]	25.1	31.8	37.3	53.4

1) The dimension relates to the retracted position of the slide. In the advanced position, the dimension must be extended accordingly.

Max. permissible forces and torques for the bearing calculation, for a service life of 5 x 10 ⁶ cycles and max. stroke					
Size		25	32	45	60
F _{y max.}	[N]	669	991	1314	4937
F _{z max.}	[N]	669	991	1314	4937
M _{x max.}	[Nm]	2.0	3.4	8.1	20
M _{y max.}	[Nm]	2.1	3.2	7	30
M _{z max.}	[Nm]	2.1	3.2	7	30

 Note

For a guide system to have a service life of 5 x 10⁶ cycles, the load comparison factor must have a value of $f_v \leq 1$, based on the maximum permissible forces and torques for a service life of 5 x 10⁶ cycles.

This formula can be used to calculate a guide value.

The engineering software “Electric Motion Sizing” is available for more precise calculations → www.festo.com/x/electric-motion-sizing

If the axis is subjected to two or more of the indicated forces and torques simultaneously, the following equation must be satisfied in addition to the indicated maximum loads:

Calculating the load comparison factor:

$$f_v = \frac{|F_{y1}|}{F_{y2}} + \frac{|F_{z1}|}{F_{z2}} + \frac{|M_{x1}|}{M_{x2}} + \frac{|M_{y1}|}{M_{y2}} + \frac{|M_{z1}|}{M_{z2}} \leq 1$$

F_1/M_1 = dynamic value

F_2/M_2 = maximum value

Data sheet

Calculating the service life

The service life of the guide depends on the load. To be able to make a statement as to the service life of the guide, the graph below plots the load comparison factor f_v against the service life.

These values are only theoretical. You must consult your local Festo contact for a load comparison factor f_v greater than 1.

Load comparison factor f_v as a function of service life l

Example:

A user wants to move an x kg load. Using the formula (→ page 10) gives a value of 1.5 for the load comparison factor f_v . According to the graph, the guide has a service life of approx. 1.5×10^6 cycles. Reducing the acceleration reduces the M_y and M_z values. A load comparison factor f_v of 1 now gives a service life of 5×10^6 cycles.

Comparison of the characteristic load values for 5×10^6 cycles with dynamic forces and torques of recirculating ball bearing guides

The characteristic load values of bearing guides are standardised to ISO and JIS using dynamic and static forces and torques. These forces and torques are based on an expected service life of the guide system of 100 km according to ISO or 50 km according to JIS.

As the characteristic load values are dependent on the service life, the maximum permissible forces and torques for a 5000 km service life cannot be compared with the dynamic forces and torques of bearing guides to ISO/JIS.

To make it easier to compare the guide capacity of mini slides EGSC with bearing guides, the table below lists the theoretically permissible forces and torques for a calculated service life of 100 km. This corresponds to the dynamic forces and torques to ISO.

These 100 km values have been calculated mathematically and are only to be used for comparing with dynamic forces and torques to ISO. The drives must not be loaded with these characteristic values as this could damage the axes.

Max. permissible forces and torques for a theoretical service life of 100 km (from a guide perspective only)

Application: mass m on the slide

Size		25	32	45	60

Material:

Anodised wrought aluminium alloy

RoHS-compliant

- For mounting the slide on the side of the profile.

The profile mounting can be fixed in place on the mounting surface using the drill hole in the centre
