

Spindle axes ELGC-BS-KF

FESTO

This drive is also available as a product unit as part of the
Simplified Motion Series
Spindle axis ELGS-BS-KF

Characteristics

At a glance

- Optimal installation space to working space ratio
- Protected against external influences by internal guide
- Unique assembly system
- Compact double bearing integrated in the axis to save space
- Stainless steel cover strip kept in place with magnetic strips
- Wide range of mounting options for optimum machine integration

Compact

Optimum dimensions thanks to the integrated compact coupling and a very short slide

Flexible

Adapterless combination of ELGC and EGSC using the innovative "one size down" assembly system

Integrated

Simple position sensing with proximity switch SMT-8M and integrated positioning magnet

Protected

The cover strip and the optional vacuum connection provide protection against particle immissions and emissions

Modular and flexible with motor, motor mounting kit and servo drive

Motor

Servo motor

Stepper motor

Servo drive

Servo drive

Motor controller for stepper motor

Motor mounting kit

Axial kit

Parallel kit

Simplicity in one unit

This product is also available as a product unit as part of the Simplified Motion Series:

- The Simplified Motion Series combines the simplicity of pneumatics with the benefits of electric automation. The perfect solution for all users who are looking for an electric alternative for very simple movement and positioning tasks, but don't want the commissioning process for traditional electric drive systems that can often be quite complex.
- Simplified functionality for simple movements between two end positions
- A variety of movements with different mechanical systems
- Integrated products eliminate the need for a control cabinet
- Quick and easy commissioning without software or special expertise
- Digital I/O and IO-Link integrated as standard

Characteristics

From the individual axis to the complete handling system

- The toothed belt and spindle axes ELGC and mini slide EGSC form a scalable modular system for compact automation
- The shared platform architecture creates a consistent range with matching interfaces. A large number of systems can be realised entirely without adapter plates
- Powerful drive and guide components ensure a long service life, as well as excellent load capacity and reliability
- The uniform and universal range of accessories reduces warehousing and design costs
- Two position sensing functions can be selected:
 - With magneto-resistive proximity switches (detection via integrated magnets)
 - With inductive proximity switches (detection via switch lug)

EGSC

Typical handling systems

For applications where compact dimensions are essential, the axes ELGC can be combined into very space-saving handling systems that are suitable for assembly systems, test and inspection systems, small parts handling, the electronics industry and desktop applications. The very compact linear axes ELGC, mini slide EGSC and electric cylinder EPCC offer an optimal ratio between installation space and working space. They feature a common system approach and platform architecture and the connections are largely adapterless.

[10] Profile mounting EAHF-L2-...-P	For mounting the axis on the side of the profile. The profile mounting can be attached to the mounting surface using the drilled hole in the centre		22
[11] Profile mounting EAHF-L2-...-P-S	For mounting the axis on the side of the profile		21
[12] Motor EMME-AS, EMMS-ST	Motors specially matched to the axis, with or without brake		19
[13] Axial kit EAMM-A	For axial motor mounting		19
[14] Parallel kit EAMM-U	For parallel motor mounting		20

Sealing air connection

Air is exchanged between the interior of the cylinder and the environment via a sealing air connection. This prevents negative pressure or overpressure arising in the interior of the cylinder.

Additional functions of the connection:

- Application of slight negative pressure prevents emission of particles
- Application of slight overpressure prevents immission of particles

Suitable push-in fittings → page 27

Data sheet

Characteristic load values

The indicated forces and torques refer to the centre of the guide. The point of application of force is the point where the centre of the guide and the longitudinal centre of the slide intersect. These values must not be exceeded during dynamic operation. Special attention must be paid to the deceleration phase.

Distance from the slide surface to the centre of the guide

Max. permissible forces and torques on the slide (strength limits)					
Size		32	45	60	80
$F_{y_{max}}$	[N]	150	300	600	900

$M_{x_{max}}$	[Nm]	1.3	5.5	29.1	59.8
$M_{y_{max}}$	[Nm]	1.1	4.7	31.8	56.2
$M_{z_{max}}$	[Nm]	1.1	4.7	31.8	56.2

Distance from the slide surface to the centre of the guide					
Size		32	45	60	80
Dimension x	[mm]	31.4	42.8	54.6	72.5

Max. permissible forces and torques for the guide calculation, for a service life of 5000 km or 5x 10 ⁶ cycles					
Size		32	45	60	80
$F_{y_{max}}$	[N]	356	880	3641	5543
$F_{z_{max}}$	[N]	356	880	3641	5543
$M_{x_{max}}$	[Nm]	1.3	5.5	29.1	59.8
$M_{y_{max}}$	[Nm]	1.1	4.7	31.8	56.2
$M_{z_{max}}$	[Nm]	1.1	4.7	31.8	56.2

Note

For a guide system to have a service life of 5000 km, the load comparison factor must have a value of $f_v \leq 1$, based on the maximum permissible forces and torques for a service life of 5000 km.

This formula can be used to calculate a guide value.

The engineering software "Electric Motion Sizing" is available for more precise calculations → www.festo.com/x/electric-motion-sizing

If the axis is subjected to two or more of the indicated forces and torques simultaneously, the following equation must be satisfied in addition to the indicated maximum loads:

Calculating the load comparison factor:

$$f_v = \frac{|F_{y1}|}{F_{y2}} + \frac{|F_{z1}|}{F_{z2}} + \frac{|M_{x1}|}{M_{x2}} + \frac{|M_{y1}|}{M_{y2}} + \frac{|M_{z1}|}{M_{z2}} \leq 1$$

F_1/M_1 = dynamic value

F_2/M_2 = maximum value

Data sheet

Calculating the service life

The service life of the guide depends on the load. To be able to make a statement as to the service life of the guide, the graph below plots the load comparison factor f_v against the service life.

These values are only theoretical. You must consult your local Festo contact for a load comparison factor f_v greater than 1.

Load comparison factor f_v as a function of service life l

Example:

A user wants to move an x kg load. Using the formula (→ page 10) gives a value of 1.5 for the load comparison factor f_v . According to the graph, the guide would have a service life of approx. 1 500 km. Reducing the acceleration reduces the M_y and M_z values. A load comparison factor f_v of 1 now gives a service life of 5000 km.

Comparison of the characteristic load values for 5000 km with dynamic forces and torques of recirculating ball bearing guides

The characteristic load values of the bearing guides are standardised to ISO and JIS using dynamic and static forces and torques. These forces and torques are based on an expected service life of the guide system of 100 km according to ISO or 50 km according to JIS.

As the characteristic load values are dependent on the service life, the maximum permissible forces and torques for a 5000 km service life cannot be compared with the dynamic forces and torques of bearing guides to ISO/JIS.

To make it easier to compare the guide capacity of linear axes ELGC with bearing guides, the table below lists the theoretically permissible forces and torques for a calculated service life of 100 km. This corresponds to the dynamic forces and torques to ISO.

These 100 km values have been calculated mathematically and are only to be used for comparing with dynamic forces and torques to ISO. The drives must not be loaded with these characteristic values as this could damage the axes.

Max. permissible forces and torques for a theoretical service life of 100 km (from a guide perspective only)

Size		32	45	60	80
$F_{y_{max}}$	[N]	1310	3240	13400	20400
$F_{z_{max}}$	[N]	1310	3240	13400	20400
$M_{x_{max}}$	[Nm]	5	20	107	220
$M_{y_{max}}$	[Nm]	4	17	117	207
$M_{z_{max}}$	[Nm]	4	17	117	207

Size		32	45	60	80
I_y	[mm ⁴]	38×10^3	140×10^3	441×10^3	1.37×10^6
I_z	[mm ⁴]	45×10^3	170×10^3	542×10^3	1.66×10^6

Recommended deflection limits

Adherence to the following deflection limits is recommended so as not to impair the functionality of the axes. Greater deformation can result in increased friction, greater wear and reduced service life.

Size	Dynamic deflection (moving load)	Static deflection (stationary load)
32 ... 80	0.05% of the axis length, max. 0.5 mm	0.1% of the axis length

Accessories

Note

Depending on the combination of motor and drive, it may not be possible to reach the maximum feed force of the drive.

When using parallel kits, the no-load driving torque of the particular kit must be taken into consideration.

Permissible axis/motor combinations with axial kit – Without gear unit

1) The input torque must not exceed the max. permissible transferable torque of the parallel kit.

Accessories

Profile mounting EAHF-L2-...-P-S

Material:

Anodised wrought aluminium alloy

RoHS-compliant

- For mounting the axis on the side of the profile

Dimensions and ordering data

Accessories

Profile mounting EAHF-L2-...-P

Material:

Anodised wrought aluminium alloy

RoHS-compliant

- For mounting the axis on the side of the profile.
The profile mounting can be attached to the mounting surface using the drill hole in the centre.

Accessories

Adapter kit EHAA-D-L2

Material:

Anodised wrought aluminium alloy

RoHS-compliant

- For axis/axis mounting with adapter plate
- Mounting option: base axis with same size or one-size-down assembly axis (→ page 1)
- When motors are mounted using parallel kits, this may lead to interfering contours. In this case, the adapter plate is required for height compensation (download CAD data → www.festo.com)
