

## Solenoid valves VUVG/valve terminals VTUG

FESTO

Festo Core Range

Solves the majority of your automation tasks

Worldwide:  
Simply good:  
Fast:

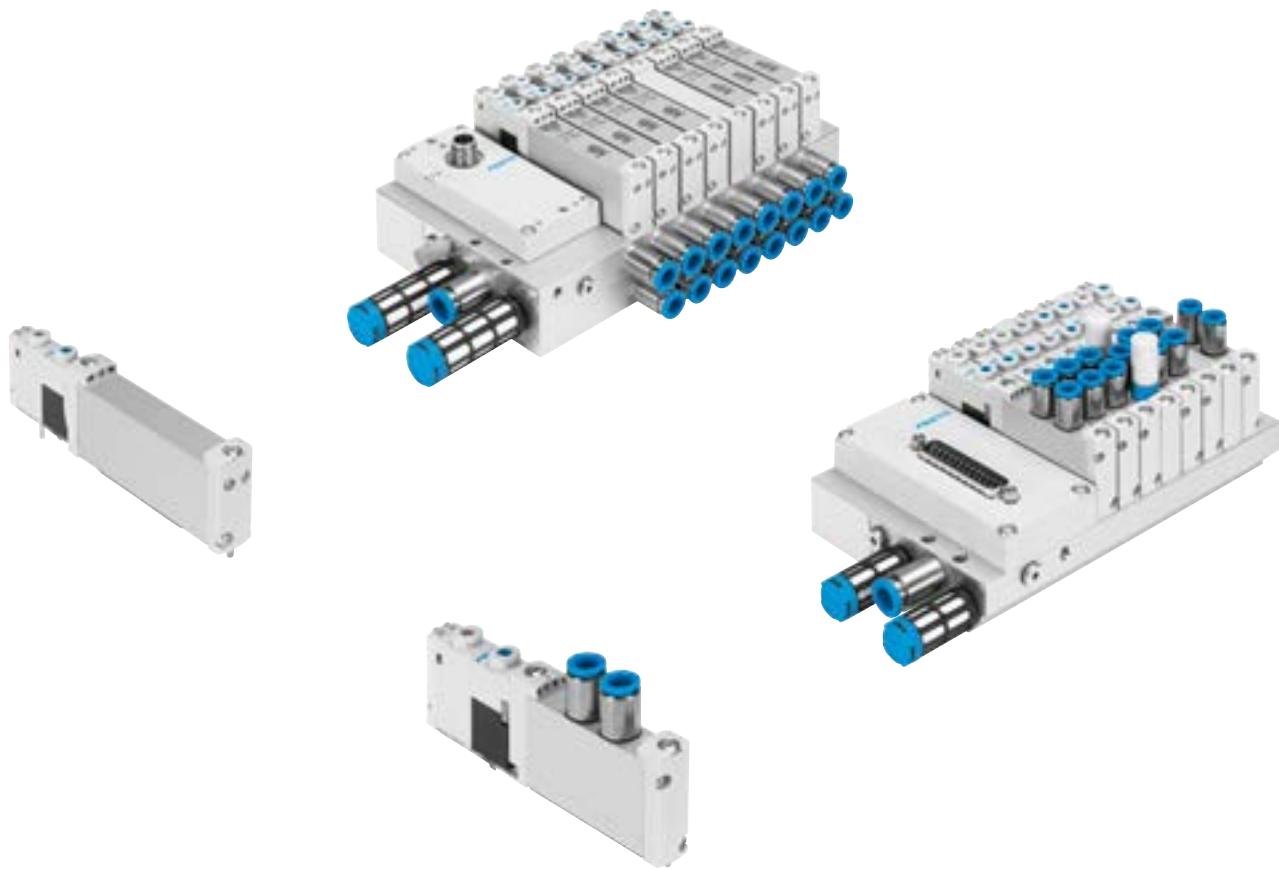

Quickest delivery – wherever, whenever  
Expected high Festo quality  
Easy and fast to select

With the Festo Core Range, we have selected the most important products and functions from our broad product catalogue, and added the quickest delivery.

The Core Range offers you the best value for your automation tasks.

Just look  
for the  
star!

## Key features

### Innovative

- Festo-specific I-Port interface for bus nodes (CTEU)
- IO-Link mode for direct connection to a higher-order IO-Link master
- Festo-specific I-Port interface with interlock
- Variable multi-pin plug connection using Sub-D or ribbon cable
- Reversible piston spool valves, up to 24 valve positions
- Reduced power consumption
- Excellent price/performance ratio

### Flexible

- Choice of quick push-in connectors
- Multiple pressure zones possible
- Sub-D variant and fieldbus interface with degree of protection to IP67
- Internal or external pilot air with the same manifold rail possible through the use of blanking plugs
- Sub-base valves with working ports underneath for installation in control cabinets

### Reliable

- Sturdy and durable metal components
  - Valves
  - Manifold rails
- Fast troubleshooting thanks to LED display
- Manual override: choose from non-detenting, detenting or covered

### Easy to install

- Easy mounting thanks to captive screws and seal
- Connection technology easy to change
- Inscription label holder for labelling

### Valve terminal configurator

A valve terminal configurator is available to help you select a suitable valve terminal VTUG. This makes it much easier to order the right product.

Valve terminals VTUG are ordered via an ident. code. All valve terminals are supplied fully assembled and individually tested.

Download CAD data → [www.festo.com](http://www.festo.com)

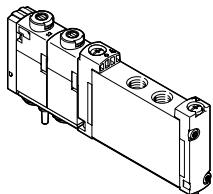

This reduces assembly and installation time to a minimum.

Ordering system for valve terminal VTUG  
→ Internet: vtug

## Key features

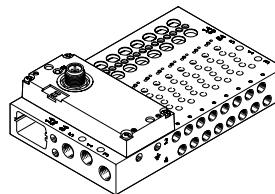

### Sub-base and semi in-line valves for valve terminal VTUG

VUVG-S...1T1, semi in-line valve

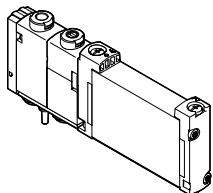

The supply ports (1, 3 and 5) for semi in-line valves are connected to the valve by common pneumatic links (e.g. sub-base). The working ports (2, 4) are on the valve.

Valve terminal VTUG with different electrical connections

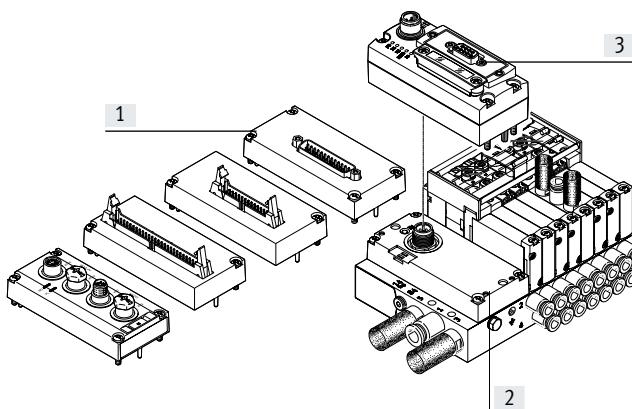

VUVG-B...1T1, sub-base valve

The supply ports (1, 3 and 5) and the working ports (2, 4) of sub-base valves are connected to the valve through the sub-base or manifold.

### Overview – Valve terminal with multi-pin plug connection and fieldbus interface

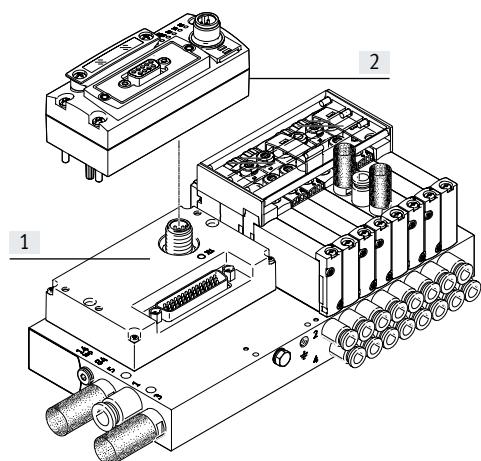

Different electrical connections:

- [1] Ribbon cable or Sub-D
- [2] I-Port interface

- [3] Bus node CTEU

### Overview – Valve terminal with interlock

Different electrical connections:

- [1] I-Port interface with interlock
- [2] Bus node CTEU

## Key features

### Equipment options

#### Valve functions

- 2x 3/2-way, 3/2-way, 5/2-way, 5/3-way valves
- Reversible piston spool valves, up to 24 valve positions

#### Electrical connection options

- IO-Link mode for direct connection to a higher-order IO-Link master
- Festo-specific I-Port interface for bus nodes (CTEU)
- Variable multi-pin plug connection using Sub-D or ribbon cable
- Festo-specific I-Port interface with interlock (for valves of size 10 mm)

### Basic valves VUVG

#### Size

- 10
- 14
- 18
- Semi in-line valve
- Sub-base valve

### Valve functions

#### 3/2-way valve

- Single solenoid
- Normally open
- Normally closed

#### 2x 3/2-way valve

- Single solenoid
- Normally open
- Normally closed
- 1x normally closed, 1x normally open
- Mechanical spring
- Pneumatic spring

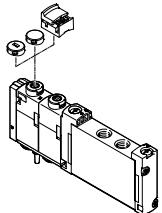

#### 5/2-way valve

- Single solenoid
- Pneumatic/mechanical spring
- Mechanical spring
- Pneumatic spring
- Double solenoid valve

#### 5/3-way valve

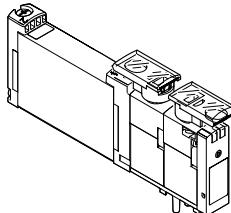

- Mid-position pressurised
- Mid-position exhausted
- Mid-position closed

### Cover caps for manual override

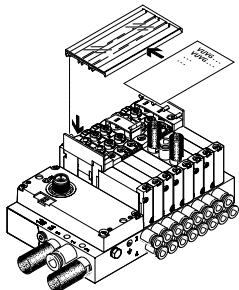

- Closed cover cap, covered manual override
- Slotted cover cap, non-detenting manual override
- Cover cap for detenting actuation without tools

### Identification holder

Identification holder ASLR-D-L1 for identifying the valves and as a covering for the manual override.

### Inscription label holder

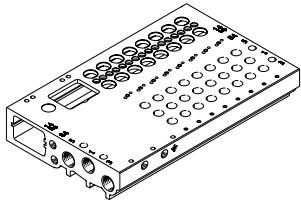

Inscription label holder ASCF-H-L1... for identifying the valves on the valve terminal VTUG

## Key features – Pneumatic components

### Manifold rail

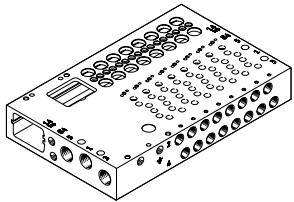

For semi in-line valves

The semi in-line valves are supplied with external pilot air. The pilot air is set via the manifold rail. The scope of delivery of the manifold rail includes a short and a long blanking plug for setting the pilot air.

- For semi in-line valves M5/M7 (size 10), G1/8 (size 14) and G1/4 (size 18)
- For 2x 3/2-way, 5/2-way and 5/3-way valves
- 4 to 24 valve positions with electrical links

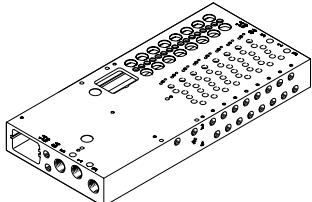

For sub-base valves

The sub-base valves are supplied with external pilot air. The pilot air is set via the manifold rail. The scope of delivery of the manifold rail includes a short and a long blanking plug for setting the pilot air.

- For sub-base valves M5/M7 (size 10), G1/8 (size 14) and G1/4 (size 18)
- For 2x 3/2-way, 3/2-way, 5/2-way and 5/3-way valves
- 4 to 24 valve positions with electrical links

Long version

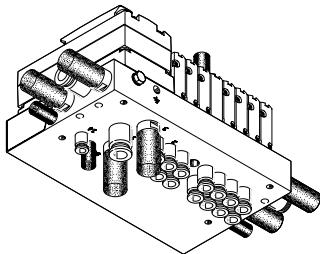

Versions:

- I-Port interface with lateral outlet orientation: for semi in-line valves and sub-base valves M5/M7 (size 10), G1/8 (size 14) and G1/4 (size 18)

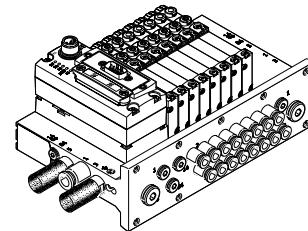

- Interlock:  
For sub-base and semi in-line valves M5/M7 (size 10)

For control cabinet installation, outlet orientation underneath (U)

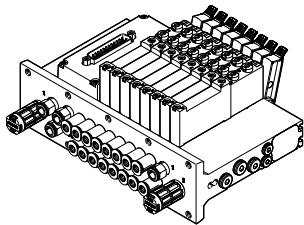

For sub-base valves M7 (size 10), G1/8 (size 14) and G1/4 (size 18).

For control cabinet installation, outlet orientation at the front (FD)

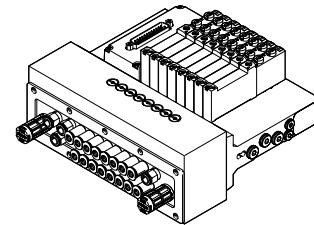

For sub-base valves M7 (size 10) and G1/8 (size 14).

For control cabinet installation with shut-off function (hot swap)

Shut-off function for duct 1, for sub-base valves M7 (size 10) and G1/8 (size 14):

- Internal pilot air supply only
- Vacuum operation not possible

Shut-off function for duct 2 and 4, for sub-base valves M7 (size 10) and G1/8 (size 14):

- Internal/external pilot air supply
- Vacuum operation not possible

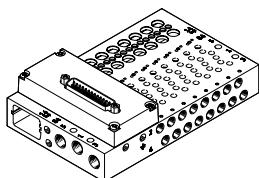

### Note

Pressurisation and exhaust at both ends is recommended for an optimised flow rate in cases where multiple valves switch simultaneously.

## Key features

### Electrical connection

#### Multi-pin plug connection

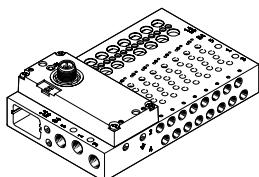

The signals are transmitted from the controller to the valve terminal via a pre-assembled or self-assembled multi-wire cable to the multi-pin plug connection.

This substantially reduces installation time compared to individually connected valves. The valve terminal can be equipped with max. 48 solenoid coils.

#### Versions:

- Sub-D connection
- Ribbon cable

#### I-Port interface

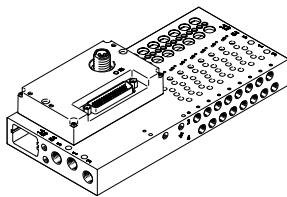

Festo-specific interface as a basis for bus nodes (CTEU) or in IO-Link mode for direct connection to a higher-order IO-Link master.

Communication and power supply take place via a common M12 interface.

#### Connection options:

- As I-Port interface for bus nodes (CTEU)
- In IO-Link mode for direct connection to an IO-Link master

#### I-Port interface with interlock

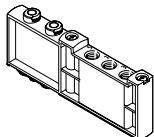

The interlock function enables the first 16 solenoid coils to be individually supplied externally.

The external supply guarantees the safety-related enabling of these valves.

### Note

The VTUG variant with multi-pin plug connection and fieldbus interface offers the additional option of individual electrical actuation of the valves (→ page 24).

### Supply plate

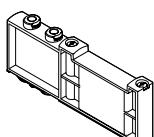

For additional air supply and exhaust via a valve position

### Note

The supply plate VABF-L1-14-P3A4-G18-T1 can only be used with G fittings. R fittings are not permissible.

### Cover plate for vacant position

Vacant position cover

### Separator for pressure zones

For creating multiple pressure zones in a valve terminal

## Key features – Pneumatic components

### Creating pressure zones and separating exhaust air

Compressed air is supplied and exhausted via the manifold rail and via supply plates.

The position of the supply plates and duct separations can be freely selected with the VTUG.

A pressure zone is created by separating the internal supply ducts using a separator.

Pressure zone separation can be used for the following ducts:

- Duct 1
- Duct 3
- Duct 5

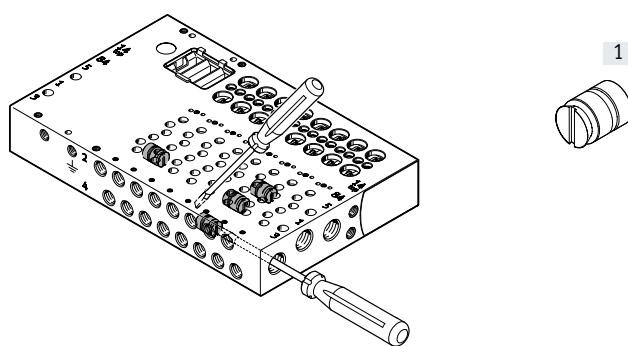

#### Note

- Use a separator if the exhaust air pressures are high
- Use at least one supply plate/air supply for each pressure zone
- Pressure zone separation is not possible in duct 12/14 (pilot air supply)

### Duct separation

	Description
	<p>The pressure zones can be freely configured with the VTUG. The following duct separations are possible:</p> <p>Duct 1 closed</p> <p>Duct 1, 3, 5 closed</p> <p>Duct 3, 5 closed</p>
	<p>The number of pressure zones with the VTUG is limited by the number of valve positions on the manifold rail. Note that each supply plate occupies one valve position.</p>

### Separator VABD

[1] Separator VABD

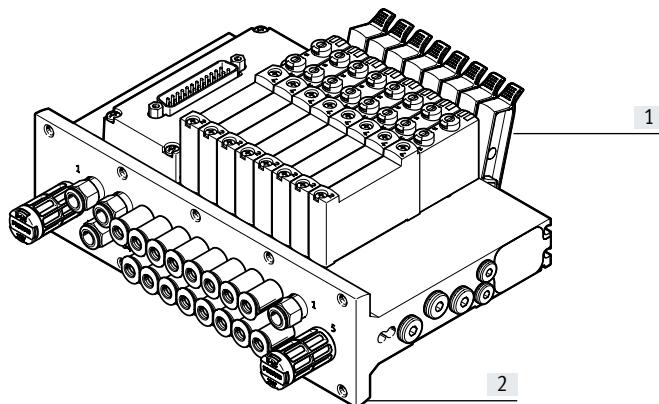

#### Note

With the VTUG, several pressure zones can be created by mounting separators (VABD). The separators are inserted in the manifold rail using a slotted screwdriver.

## Key features – Pneumatic components

### Shut-off function (hot swap)

For duct 1

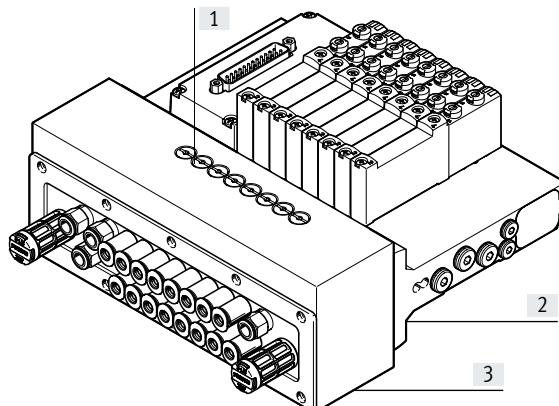

- [1] Actuating lever
- [2] Manifold rail with shut-off plate

The shut-off plate is located below the manifold block. Actuating the lever:

- disconnects the valve from the compressed air supply (duct 1)
- exhausts the pilot air supply on the valve side (duct 12 and 14)

The actuating levers can be individually locked in place, securing them against unwanted actuation.

For duct 2 and 4

- [1] Plunger
- [2] Manifold rail
- [3] Manifold block

To actuate, press in the plunger with a pointed object or screwdriver and then turn clockwise through 90° until the stop is reached:

- Connection from the valve to ports 2 and 4 is blocked
- No exhaust of components connected at ports 2 and 4

### Pilot air supply

#### Internal pilot air supply

Internal pilot air supply can be chosen with an operating pressure between 1.5 ... 8 bar, 2.5 ... 8 bar, or 3 ... 8 bar (depending on the valve used).

The pilot air supply is branched from duct 1 (compressed air supply) using an internal connection.

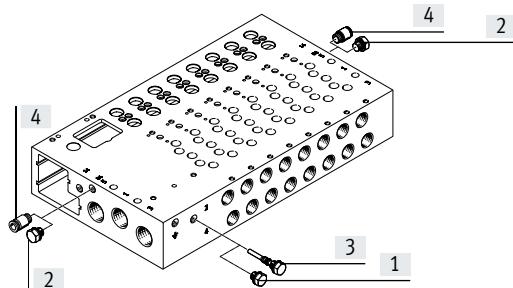

#### External pilot air supply

External pilot air supply is required for vacuum operation or operating pressures above 8 bar. The port for external pilot air supply (port 12/14) is located on the manifold rail.

#### Pilot exhaust air

The pilot air is exhausted via duct 82/84 of the manifold rail.

### Pilot air supply

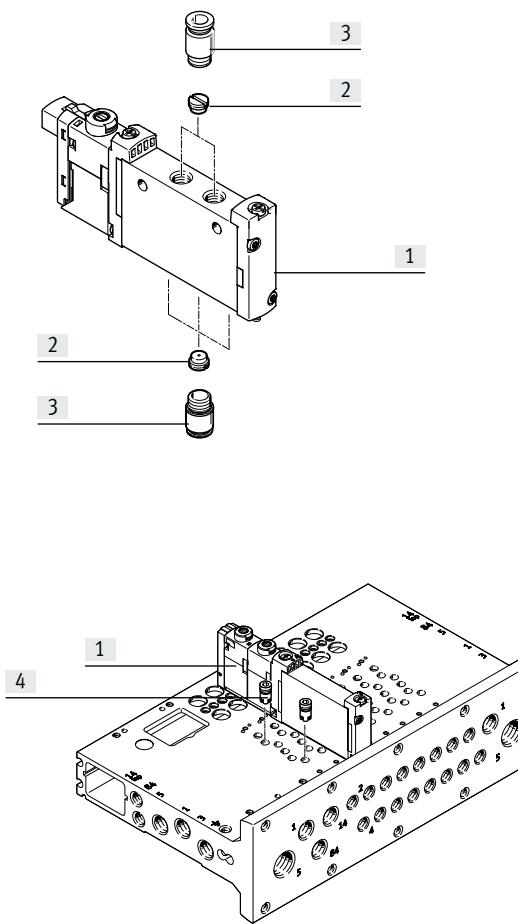

- [1] Blanking plug, short, with internal pilot air
- [2] Blanking plug for duct 12/14 with internal pilot air
- [3] Blanking plug, long, with external pilot air
- [4] Push-in fitting in duct 12/14 with external pilot air

The manifold rails have an internal connection between duct 12/14 and duct 1.

By inserting a blanking plug into this connection, it is possible to switch between internal and external pilot air.

## Key features – Pneumatic components

### Exhaust functions

- [1] Valves VUVG
- [2] Flow restrictor for M5 thread
- [3] Fitting
- [4] Fixed flow restrictor, self-tapping/check valve

#### Flow restrictor for M5 thread

Semi in-line valve, individual electrical connection: flow restrictor can be fitted in port 1, 3, 5 and/or in port 2, 4.

Sub-base valve, individual electrical connection: flow restrictor can be fitted in port 2, 4.

#### Fixed flow restrictor, self-tapping

The fixed flow restrictor can be used to permanently set the exhaust flow rate in ducts 3 and 5.

The fixed flow restrictors are screwed into ducts 3 and 5 in the manifold rail.

Please see the relevant assembly instructions:  
→ [www.festo.com/sp](http://www.festo.com/sp)

#### Check valve

Check valves block the flow towards the valves if back pressure develops in ducts 3 and 5 in the case of a high exhaust capacity, thereby preventing actuators from switching unexpectedly. The check valves are screwed into ducts 3 and 5 in the manifold rail. Please see the relevant assembly instructions:

→ [www.festo.com/sp](http://www.festo.com/sp)

#### Note

- It is not possible to use a check valve and a fixed flow restrictor (in the same duct) at the same time.
- When screwing in again, use the threads already present.

## Key features – Pneumatic components

### Operation with different pressures

#### Vacuum operation

##### Points to note with 3/2-way valves with pneumatic spring return:

The 3/2-way valves are available in a design with two valves in one valve body and with pneumatic spring return. With these valves, the force for the return movement is obtained from port 1.

Vacuum operation is only possible at port 3 and 5, not at port 1.

With external pilot air supply, vacuum can be connected at port 1, 3, 5 of the 5/2-way and 5/3-way valves.

Vacuum operation is not possible when using the shut-off function (hot swap).

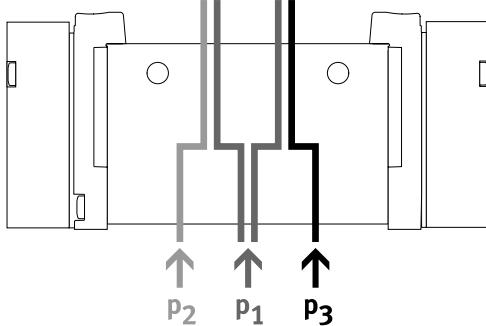

#### Reverse operation

The 3/2-way valves with pneumatic spring are not suitable for reverse operation, since at least the minimum pilot pressure must be present in duct 1.

#### Note

Pressure must be present at port 1.

### Pressure deflector (internal pilot air)

- Two different pressures are required
- Different pressures can be connected at duct 1, 3 and 5

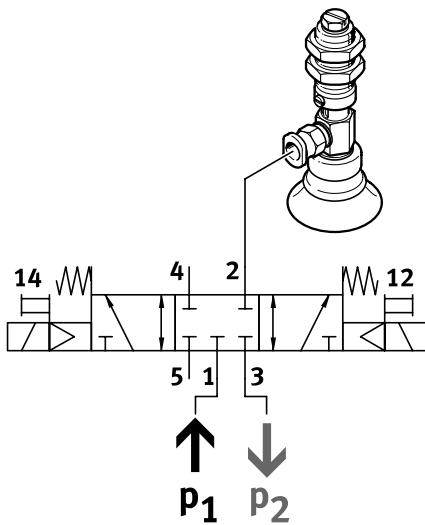

#### Advantages

Any pressure or vacuum can be connected at duct 3 and 5 both with external and internal pilot air

#### Note

- With internal pilot air, adhere to the minimum pilot pressure in duct 1
- With 2x 3/2-way valves without spring return, adhere to minimum pilot pressure in duct 1

### Vacuum, ejector pulse and normal position

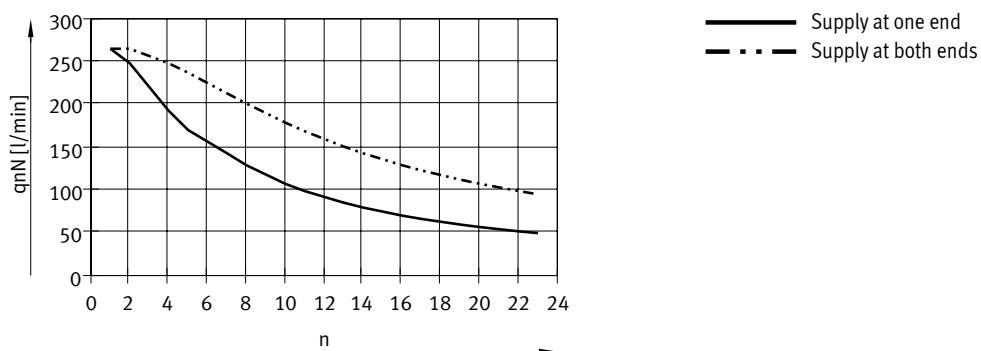

Vacuum, ejector pulse and normal position with internal pilot air can be achieved by connecting vacuum at duct 3 and pressure for the ejector pulse at duct 1.

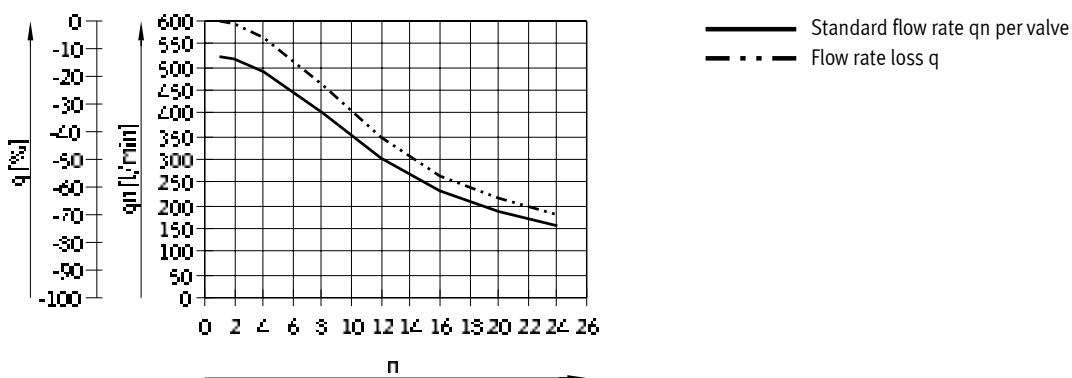

## Key features – Pneumatic components

### Standard nominal flow rate $q_{nN}$ as a function of the number of switched valves $n$

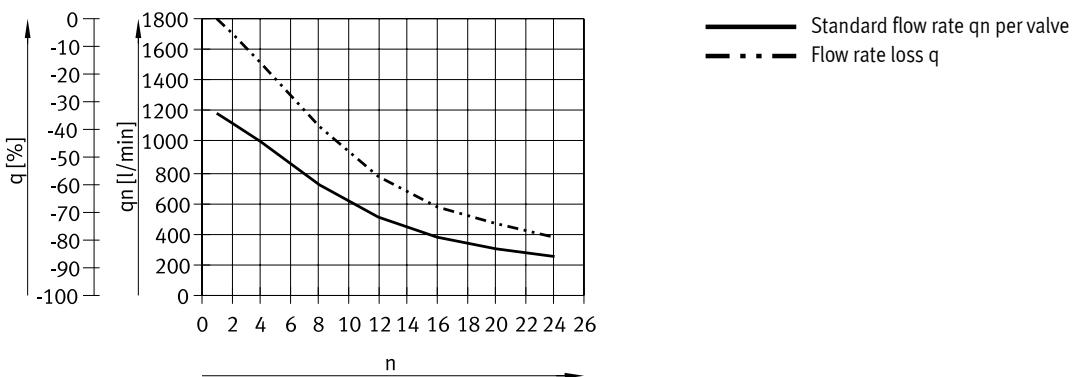

Size 10 mm, 5/2-way valves

Size 14 mm

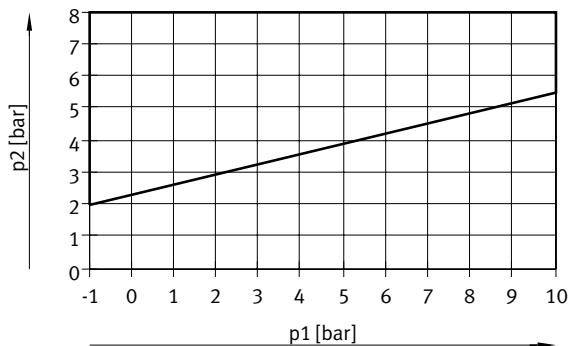

Size 18 mm

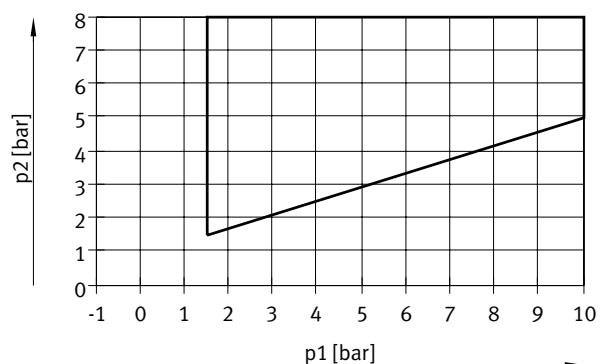

## Key features – Pneumatic components

### Pilot pressure p2 as a function of operating pressure p1

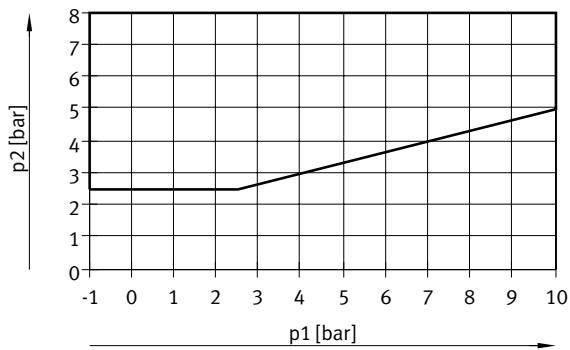

2x 3/2-way valve, mechanical spring reset

2x 3/2-way valve, pneumatic spring reset

3/2-way single solenoid valve and 5/2-way single solenoid valve

## Key features – Mounting

### Valve terminal mounting

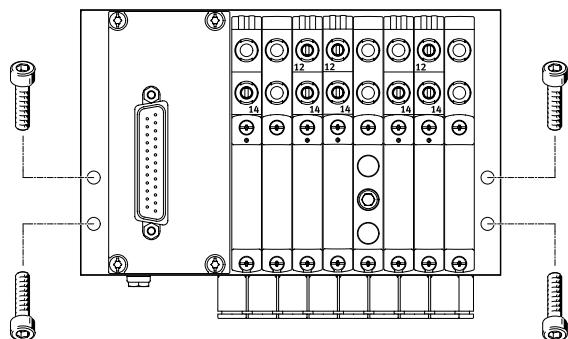

Sturdy terminal mounting via:

- Four through-holes for wall mounting
- H-rail mounting

**Note**  
Use the M5 thread provided on the manifold block for earthing the valve terminal.

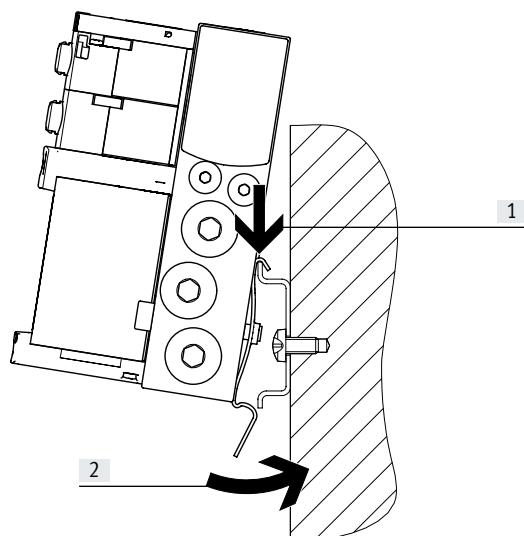

### Wall mounting

Screw the valve terminal VTUG onto the mounting surface using four M4 screws.

The mounting holes are on the left and right side of the manifold rail.

### H-rail mounting

Clip the valve terminal VTUG onto the H-rail (see arrow [1]).

Swivel the valve terminal onto the H-rail and secure in place with the clamping element (see arrow [2]).

Attach the manifold rails to a rail to EN 60715-TH35 using the H-rail mounting VAME-T-M4.

Use the following screws (to DIN 912) for mounting:

- Size 10: M4x30
- Size 14: M4x40
- Size 18: M5x50

**Note**  
Permissible use of the H-rail:

- Manifold rail with outlet on the side or on top.
- H-rail exclusively for horizontal mounting.
- Vibration/shock loads are not permissible for this type of mounting.

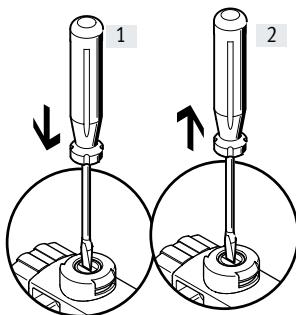

Size 14:

- Use H-rail type TH35-7.5 for valve terminals with a maximum of 8 valve positions.
- Use H-rail type TH35-15 for mounting in accordance with the standard and for more than 8 valve positions.

## Key features – Mounting

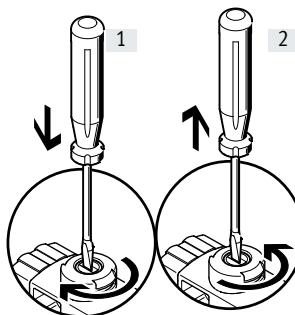

### Manual override (MO)

MO with automatic reset (non-detenting)

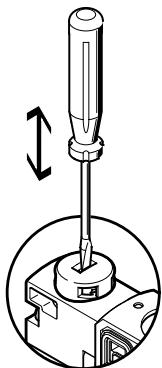

- [1] Press in the stem of the MO with a pointed object or screwdriver. Pilot valve switches and actuates the main valve.
- [2] Remove the pointed object or screwdriver. The spring force pushes the stem of the MO back. The pilot valve returns to its normal position as does the single solenoid main valve (not the case with double solenoid valve code J).

MO with detent (locking)

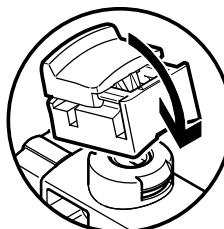

- [1] Press in the stem of the MO with a pointed object or screwdriver until the valve switches and then turn the stem clockwise by 90° until the stop is reached. The valve remains in switching position.
- [2] Turn the plunger anti-clockwise by 90° until the stop is reached and then remove the pointed object or screwdriver. The spring force pushes the stem of the MO back. The valve returns to its normal position (not the case with double solenoid valve code J).

MO non-detenting – with coded cover cap

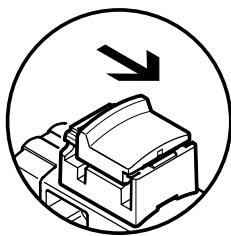

MO is actuated by pushing it with a pointed object or screwdriver and reset by spring force (detenting position prevented by coded cover cap).

MO detenting without tools – mounting

Clip MO with detent onto the pilot valve. The MO cap can then be operated (detenting) without tools.

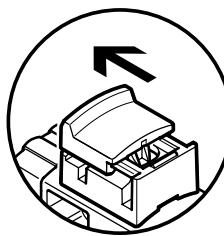

MO detenting without tools – actuation

By sliding the cap for the MO with detent in the direction of the arrow:

- Cap locks into the end position.
- Pilot valve switches and actuates the main valve.

MO detenting without tools – actuation

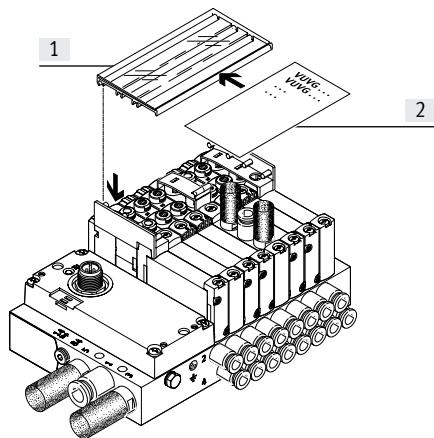

By sliding the cap for the MO with detent in the direction of the arrow:

- Cap locks into the end position.
- The spring force pushes the stem of the MO back.
- The pilot valve returns to its normal position as does the single solenoid main valve (not the case with double solenoid valve code J).

## Key features – Mounting

### Inscription system

#### Inscription label holder

- [1] Inscription label holder ASCF-H-L1 (code TT)

- [2] Inscription area

Mount the inscription label holder to label the valves. Open the inscription label holder to insert the inscription label and actuate the manual override. The inscription label holders are available in different sizes depending on the number of valve positions.

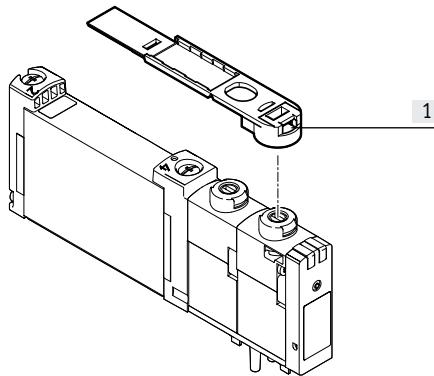

Do not engage the manual override before mounting the inscription label holder.

When mounted, the retaining bracket for the inscription label holder covers the manual override of the valves beneath it.

The manual override can then only be operated as non-detenting.

#### Identification holder

- [1] Identification holder ASLR-D-L1 (code TV)

Use identification holders ASLR-D-L1 (code TV) to label individual valves. The identification holder is placed directly on the manual override.

Do not engage the manual override before mounting the identification holder.

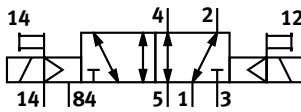

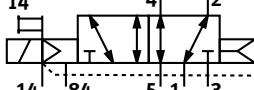

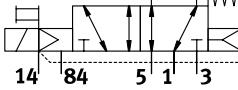

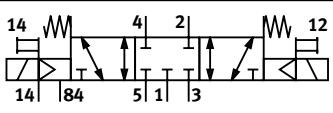

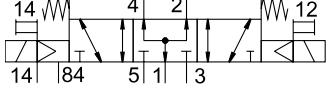

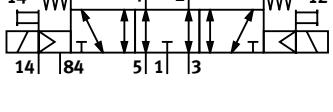

After the retaining brackets are fitted, the manual override can only be operated as non-detenting.

## Peripherals overview example – Sub-base valves

### Valve terminal with multi-pin plug connection/fieldbus interface and individually electrically actuated valves

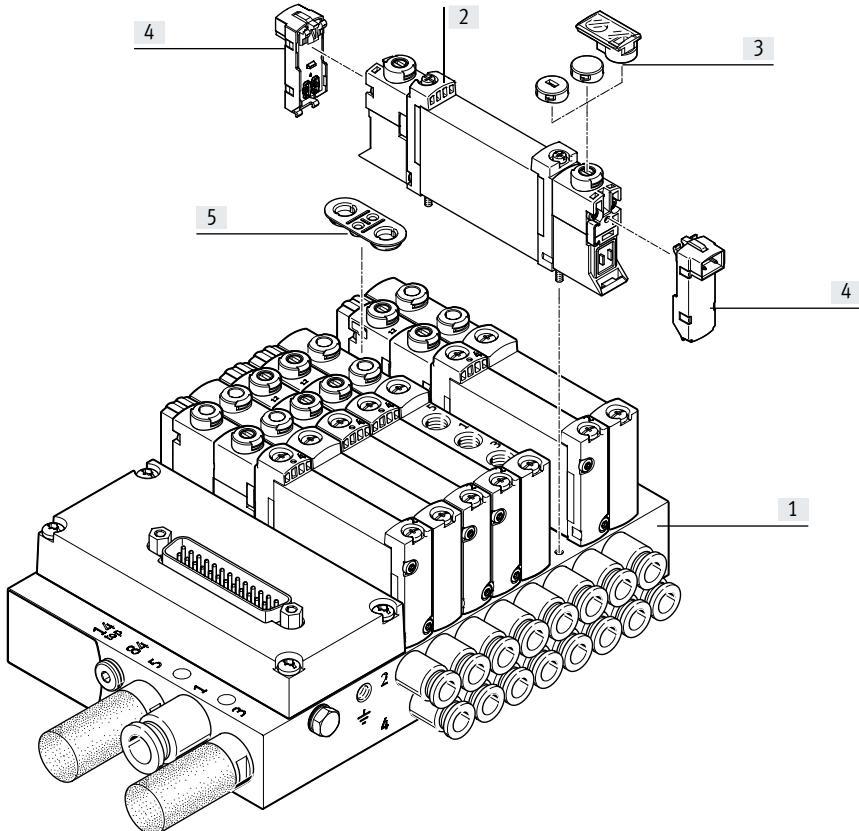

In applications with specific emergency off requirements, it may be necessary to switch one or more valves separately from the valve terminal controller.

Valves VUVG (→ VUVG) with an individual electrical connection are therefore mounted on the valve terminal.

Valves with individual electrical connection require a special seal when mounted within a valve terminal.

They are therefore ordered/fitted as follows:

- together with the valve terminal using the valve terminal configurator
- individually/subsequently to replace a cover plate in a vacant position

Accessories	Type	Description	→ Page/Internet
[1] Manifold rail	VABM-L1-10	For 2 to 10, 12 and 16 valve positions	49
[2] Solenoid valve	VUVG	Sub-base valve	25
[3] Cover cap	VMPA	For manual override	92
[4] Electrical connection block	VAVE	For individual connection	vave
[5] Seal	-	Included in the scope of delivery of the cover plate for a vacant position	92

## Type codes

001	Series

## Data sheet – Semi in-line valves M5/M7

### Function

2x 3/2C, 2x 3/2U, 2x 3/2H

- - Size 10 mm

5/2-way, single solenoid

- - Flow rate

130 ... 330 l/min

5/2-way, double solenoid

- - Voltage

24 V DC

5/3C, 5/3U, 5/3E  
Circuit symbols → page 16

### General technical data

Stable position	Monostable					Bistable		Monostable															
Pneumatic spring reset	Yes	No			Yes <sup>5)</sup>	–	–	No	–														
Mechanical spring reset	No	Yes			Yes <sup>5)</sup>	–	–	Yes	Yes														
Vacuum operation at port 1	No	With external pilot air																					
Design	Piston spool																						
Sealing principle	Soft																						
Actuation type	Electrical																						
Type of control	Piloted																						
Pilot air supply	External																						
Exhaust function	Can be throttled																						
Manual override	Choice of non-detenting, covered, non-detenting/detenting or detenting																						
Type of mounting	On manifold rail																						
Mounting position	Any																						
Overlap	Positive overlap								Indeterminate overlap														
Signal status indication	LED																						
Flow rate on manifold rail M5	[l/min]	150	130	230					210														
Flow rate on manifold rail M7	[l/min]	160	140	330		290		280															
Size	[mm]	10																					
Port	1, 3, 5, 12/14, 82/84	On manifold rail																					
	2, 4	M5 (UVVG-S10...-M5)																					
		M7 (UVVG-S10...-M7)																					
Product weight	[g]	59		53	60	53	58																
Certification		c UL us - Recognized (OL) RCM compliance mark																					
CE marking (see declaration of conformity) <sup>6)</sup>	To EU EMC Directive																						
Corrosion resistance class CRC <sup>7)</sup>	2																						

1) C=Normally closed/mid-position closed

2) U=Normally open/mid-position pressurised

3) E=Mid-position exhausted

4) H=2x 3/2-way valve in one housing with 1x normally closed and 1x normally open

5) Combined reset method

6) For information about the area of use, see the EC declaration of conformity at: [www.festo.com/sp](http://www.festo.com/sp) → Certificates.

If the devices are subject to usage restrictions in residential, commercial or light-industrial environments, further measures for the reduction of the emitted interference may be necessary.

7) Corrosion resistance class CRC 2 to Festo standard FN 940070

Moderate corrosion stress. Indoor applications in which condensation can occur. External visible parts with primarily decorative surface requirements which are in direct contact with a normal industrial environment.

## Data sheet – Sub-base valve M5/M7

### Function

3/2C, 3/2U

2x 3/2C, 2x 3/2U, 2x 3/2H

5/2-way, single solenoid

5/2-way, double solenoid

5/3C, 5/3U, 5/3E

- - Size 10 mm

- - Flow rate  
130 ... 300 l/min

- - Voltage  
24 V DC

Circuit symbols → page 16

### General technical data

Size	[mm]	10															
Port	1, 3, 5, 12/14, 82/84	On manifold rail															
	2, 4	On manifold rail															
Product weight	[g]	59			53	60	53	58									
Certification	c UL us - Recognized (OL) RCM compliance mark																
CE marking (see declaration of conformity) <sup>6)</sup>	To EU EMC Directive																
Corrosion resistance class CRC <sup>7)</sup>	2																

1) C=Normally closed/mid-position closed

2) U=Normally open/mid-position pressurised

3) E=Mid-position exhausted

4) H=2x 3/2-way valve in one housing with 1x normally closed and 1x normally open

5) Combined reset method

6) For information about the area of use, see the EC declaration of conformity at: [www.festo.com/sp](http://www.festo.com/sp) → Certificates.

If the devices are subject to usage restrictions in residential, commercial or light-industrial environments, further measures for the reduction of the emitted interference may be necessary.

7) Corrosion resistance class CRC 2 to Festo standard FN 940070

Moderate corrosion stress. Indoor applications in which condensation can occur. External visible parts with primarily decorative surface requirements which are in direct contact with a normal industrial environment.

Certification	c UL us - Recognized (OL) RCM compliance mark																		
CE marking (see declaration of conformity)	To EU EMC Directive <sup>6)</sup>																		
Corrosion resistance class CRC <sup>7)</sup>	2																		

1) C=Normally closed/mid-position closed

2) U=Normally open/mid-position pressurised

3) E=Mid-position exhausted

4) H=2x 3/2-way valve in one housing with 1x normally closed and 1x normally open

5) Combined reset method

6) For information about the area of use, see the EC declaration of conformity at: [www.festo.com/sp](http://www.festo.com/sp) → Certificates.

If the devices are subject to usage restrictions in residential, commercial or light-industrial environments, further measures for the reduction of the emitted interference may be necessary.

7) Corrosion resistance class CRC 2 to Festo standard FN 940070

Moderate corrosion stress. Indoor applications in which condensation can occur. External visible parts with primarily decorative surface requirements which are in direct contact with a normal industrial environment.

## Data sheet – Multi-pin plug connection

The following multi-pin plug connections are available for the valve terminal VTUG:

- Sub-D (25-pin)
- Sub-D (44-pin)
- Ribbon cable (26-pin)
- Ribbon cable (50-pin)

### Electrical multi-pin

Each pin on the multi-pin plug can actuate exactly one solenoid coil.

If the maximum configurable number of valve positions is 24, this means that 48 valve functions can be addressed.

The valves can be switched using positive or negative logic (positive switching or negative switching).

Mixed operation is generally not possible; however, an exception is made for the V22 ... V25 variants with 25-pin Sub-D. With these variants, a specific range of valve positions (e.g. Com 16...19) is supplied with common voltage.

This allows these ranges to be switched with positive or negative logic and valve groups to be switched off independently of the other ranges. Mixed operation within a range is not permitted.

#### - - Note

A double solenoid valve occupies one valve position and two pins on the multi-pin plug. This means that the number of double solenoid valves per manifold rail is limited. (Pin allocation → Page 76)

### General technical data

Type	VAEM-L1-S-M1-25	VAEM-L1-S-M1-44	VAEM-L1-S-M3-26	VAEM-L1-S-M3-50
Number of pins	25-pin	44-pin	26-pin	50-pin
Electrical connection	Sub-D plug		Ribbon connector	
Max. no. of valve positions	24		24	
Degree of protection to EN 60529	IP67		IP40	
Material	PA		PA	
Note on materials	RoHS-compliant		RoHS-compliant	
Certification	c UL us - Recognized (OL)			
CE marking (see declaration of conformity) <sup>1)</sup>	To EU EMC Directive			
Corrosion resistance class CRC <sup>2)</sup>	2			
Weight	[g]	53	45	48

1) For information about the area of use, see the EC declaration of conformity at: [www.festo.com/sp](http://www.festo.com/sp) → Certificates.

If the devices are subject to usage restrictions in residential, commercial or light-industrial environments, further measures for the reduction of the emitted interference may be necessary.

2) Corrosion resistance class CRC 2 to Festo standard FN 940070

Moderate corrosion stress. Indoor applications in which condensation can occur. External visible parts with primarily decorative surface requirements which are in direct contact with a normal industrial environment.

## Data sheet – I-Port interface/IO-Link

Festo-specific, standardised interface for direct connection to the fieldbus by mounting the bus node CTEU or to an IO-Link master via a cable (in IO-Link mode).

### I-Port interface/IO-Link

Versions:

- I-Port interface for bus nodes (CTEU)
- IO-Link mode for direct connection to a higher-order IO-Link master

The following protocols are supported in connection with the associated CTEU bus node:

- CANopen
- DeviceNet
- PROFIBUS
- CC-Link
- EtherCAT
- AS-Interface
- PROFINET
- EtherNet/IP
- VARAN
- Installation system CPI of Festo

The electrical supply/transmission of communication takes place via an M12 plug.

The valve terminal can be equipped with 4 ... 24 (double solenoid) valves.

### General technical data

Types of communication		IO-Link
Electrical connection		<ul style="list-style-type: none"> <li>• M12 plug, 5-pin</li> <li>• A-coded</li> <li>• Metal thread for shielding</li> </ul>
Baud rates	COM3 COM2	[kbps] 230.4 38.4
Intrinsic current consumption, logic supply PS		[mA] 30
Intrinsic current consumption, valve supply PL		[mA] 30
Max. number of solenoid coils	VAEM-L1-S-8-PT	16
	VAEM-L1-S-16-PT	32
	VAEM-L1-S-24-PT	48
Max. no. of valve positions	VAEM-L1-S-8-PT	8
	VAEM-L1-S-16-PT	16
	VAEM-L1-S-24-PT	24
Ambient temperature	[°C]	-5 ... +50
Product weight	Outlet on top	[g] 49
	Outlet on the side	[g] 100
Degree of protection to EN 60529	IP67	
Certification	c UL us - Recognized (OL)	
CE marking (see declaration of conformity) <sup>1)</sup>	To EU EMC Directive	
Corrosion resistance class CRC <sup>2)</sup>	2	

1) For information about the area of use, see the EC declaration of conformity at: [www.festo.com/sp](http://www.festo.com/sp) → Certificates.

If the devices are subject to usage restrictions in residential, commercial or light-industrial environments, further measures for the reduction of the emitted interference may be necessary.

2) Corrosion resistance class CRC 2 to Festo standard FN 940070

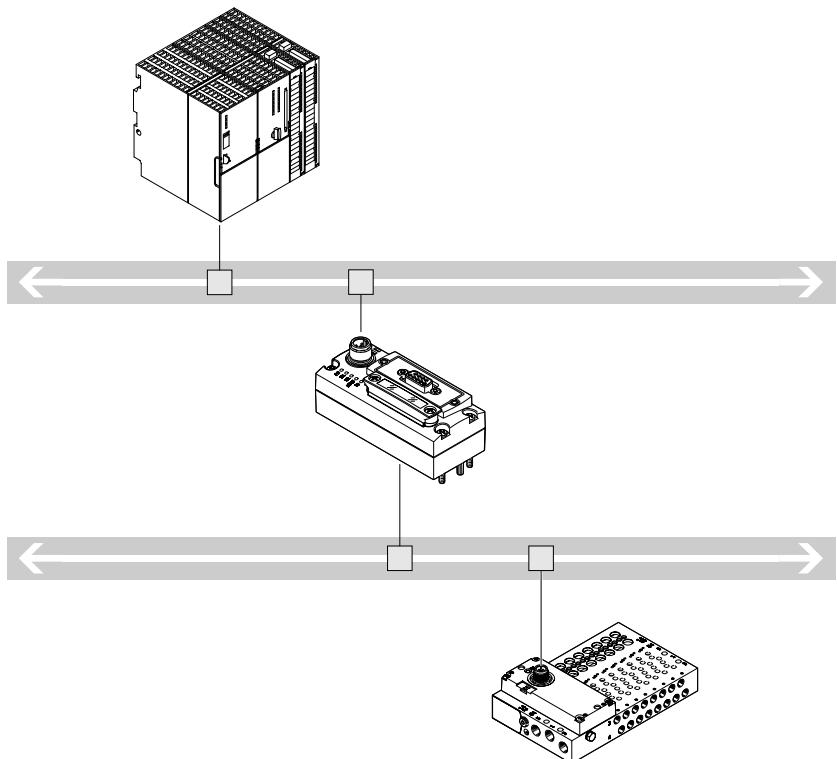

Moderate corrosion stress. Indoor applications in which condensation can occur. External visible parts with primarily decorative surface requirements which are in direct contact with a normal industrial environment.

## Data sheet – I-Port interface/IO-Link

Status LED X1	Meaning (up to Rev. 07)	Meaning (from Rev. 08)
Illuminated green	Normal operating status	Data communication faulty
Flashes green	Data communication faulty	Normal operating status
Flashes alternately between red/green	24 V load voltage supply faulty	-
Flashes red	Device error	
Illuminated red	24 V load voltage supply and data communication faulty	24 V load voltage supply faulty. Data communication may be faulty
Off	No 24 V operating voltage supply or undervoltage	

Pin allocation – I-Port interface/IO-Link			
	Pin	Allocation	Description
	1	24V <sub>EL/SEN</sub>	Operating voltage supply (electronics, sensors/inputs)
	2	24V <sub>VAL/OUT</sub>	Load voltage supply (valves/outputs)
	3	0V <sub>EL/SEN</sub>	Operating voltage supply (electronics, sensors/inputs)
	4	C/Q	Data communication
	5	0V <sub>VAL/OUT</sub>	Load voltage supply (valves/outputs)

## System overview – IO-Link

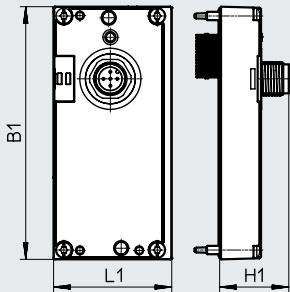

- Communication with the higher-order controller via fieldbus
- Use a bus node CTEU compatible with the fieldbus protocol
- Up to 64 inputs/outputs (solenoid coils), depending on the valve terminal
- No preprocessing

## Data sheet – CAPC

## Function

The electrical connection block CAPC enables the decentralised installation of bus nodes CTEU on a valve terminal or input modules with I-Port interface.

## Areas of application

- M12 connection technology (two interfaces)
- Enables the installation of valve terminals or other devices over a distance of 20 metres
- Accessory CAFM enables the block to be installed on an H-rail

## General technical data

Type	CAPC-F1-E-M12	
Dimensions W x L x H	[mm]	50 x 148 x 28
Fieldbus interface		2x M12 socket, 5-pin
Operating voltage range	[V DC]	18 ... 30
Max. power supply	[A]	2
Nominal operating voltage	[V DC]	24
Product weight	[g]	85
Cable length	[m]	20

## Materials

Housing	Reinforced PA
Note on materials	RoHS-compliant

## Operating and environmental conditions

Degree of protection to EN 60529	IP65, IP67
Ambient temperature	[°C] -5 ... +50
Storage temperature	[°C] -20 ... +70
Corrosion resistance class CRC <sup>1)</sup>	2
CE marking (see declaration of conformity) <sup>2)</sup>	To EU EMC Directive

1) Corrosion resistance class CRC 2 to Festo standard FN 940070

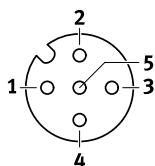

Moderate corrosion stress. Indoor applications in which condensation can occur. External visible parts with primarily decorative surface requirements which are in direct contact with a normal industrial environment.

2) For information about the area of use, see the EC declaration of conformity at: [www.festo.com/sp](http://www.festo.com/sp) → Certificates.

If the devices are subject to usage restrictions in residential, commercial or light-industrial environments, further measures for the reduction of the emitted interference may be necessary.

## Pin allocation – Power supply/IO-Link interfaces

Pin	Allocation	Description

## Data sheet – Interlock

**Interlock**

The interlock function enables the first 16 solenoid coils to be individually supplied externally.

This guarantees the safety-related enabling of these valves.

The interlock interface is established via external contacts for a single-pin connection or via safety output terminals for a double-pin connection.

**General technical data**

Types of communication	I-Port/IO-Link	
Number of valve positions	4...24	
Max. number of solenoid coils	48	
Number of interlock solenoid coils	16	
Number of inputs for voltage feedback	18 (16x interlock + 2 group supply)	
Mounting position	Any	
Nominal flow rate	[l/min]	330
Product weight	[g]	80
Residual ripple	[V <sub>SS</sub> ]	4
Baud rate	COM3	[kbps]
	COM2	[kbps]
IO-Link	Protocol	V1.0
	Connection technology	M12, A-coded
	Port type	Type B
	No. of ports	1
	Process data width OUT	6 bytes
	Process data width IN	4 bytes
	Minimum cycle time	11.5 ms (2.3 ms per frame = 2 bytes of user data)
Corrosion resistance class CRC <sup>1)</sup>	2	

1) Corrosion resistance class CRC 2 to Festo standard FN 940070

Moderate corrosion stress. Indoor applications in which condensation can occur. External visible parts with primarily decorative surface requirements which are in direct contact with a normal industrial environment.

## Data sheet – Interlock

### Interlock interface

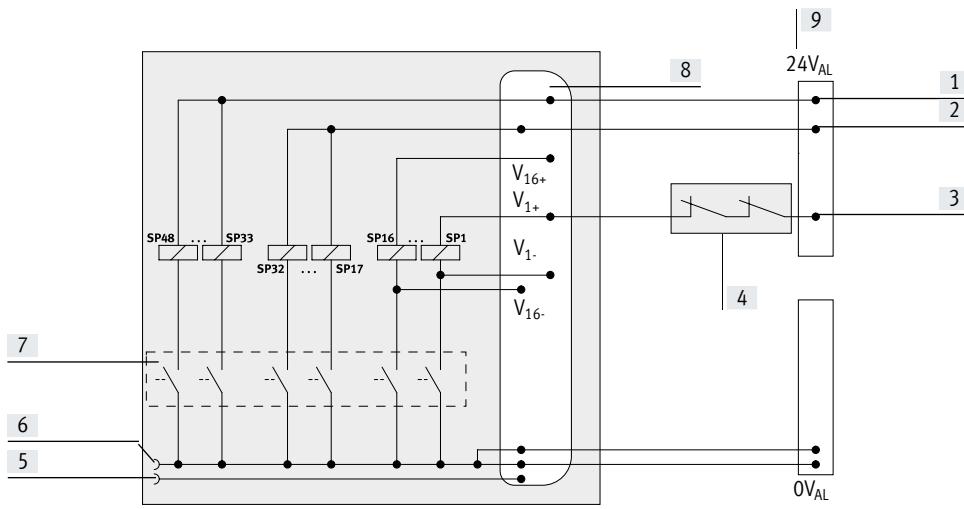

#### Single-pin interlock interface

- The interlock interface is established via external positive switching contacts or single-pin switching safety terminals
- 16 solenoid coils can be actuated via the interlock ( $V_{n+}$ )
- Solenoid coils that do not require interlock actuation can be supplied directly with 24 V from pins 1 ... 3
- Application of the respective input voltage is reported via the fieldbus as a process image

#### Double-pin interlock interface

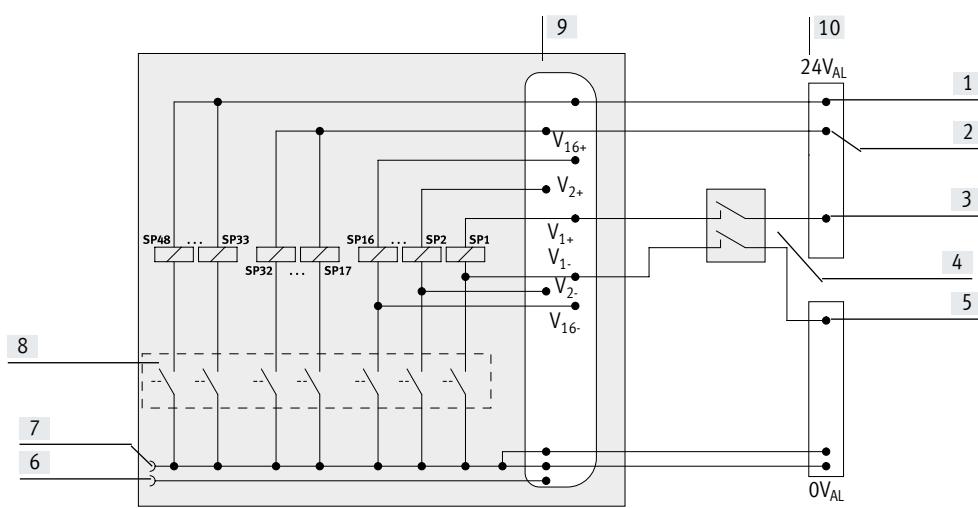

- The interlock interface is established via external positive-negative switching safety terminals
- The solenoid coils of the interlock valves are actuated via the corresponding pins in the sub-D plug (pins 7 ... 38)
- The solenoid coils that do not require interlock actuation can be supplied directly with 24 V (e.g. from pins 1 ... 3)
- Any difference in potential between  $V_{n-}$  and 0 VVAL/OUT must be below 5 V

#### Sample circuit diagram for a single-pin interlock interface

- [1] Power supply  $V_+$ ; solenoid coil 33 ... 48 (no interlock)
- [2] Power supply  $V_+$ ; solenoid coil 17 ... 32 (no interlock)
- [3] Actuation  $V_{n+}$  (via interlock)
- [4] Interlock contacts of the output terminal
- [5] I-Port connection pin 2, 24 VVAL/OUT (PL), load voltage supply
- [6] I-Port connection pin 5, 0 VVAL/OUT (PL), load voltage supply
- [7] Driver, actuated via fieldbus/I-Port
- [8] Interlock Sub-D connection
- [9] Power supply (interlock)

#### Sample circuit diagram for a double-pin interlock interface

- [1] Power supply  $V_+$ ; solenoid coil 33 ... 48 (no interlock)
- [2] Power supply  $V_+$ ; solenoid coil 17 ... 32 (no interlock)
- [3] Actuation  $V_{n+}$  (via interlock)
- [4] Interlock contacts of the output terminal
- [5] Actuation  $V_{n-}$  (via interlock)
- [6] I-Port connection pin 2, 24 VVAL/OUT (PL), load voltage supply
- [7] I-Port connection pin 5, 0 VVAL/OUT (PL), load voltage supply
- [8] Driver, actuated via fieldbus/I-Port
- [9] Interlock Sub-D connection
- [10] Power supply (interlock)

<b>Bus connection</b>				
	Sub-D plug, straight	For CANopen	532219	FBS-SUB-9-BU-2x5POL-B
		For CC-Link	532220	FBS-SUB-9-GS-2x4POL-B
		For PROFIBUS	532216	FBS-SUB-9-GS-DP-B
	Sub-D plug, angled, 9-pin	For CANopen	533783	FBS-SUB-9-WS-CO-K
		For PROFIBUS	533780	FBS-SUB-9-WS-PB-K
	M12x1, 5-pin	A-coded, for CANopen	525632	FBA-2-M12-5POL
		B-coded, for PROFIBUS	533118	FBA-2-M12-5POL-RK
	For 5-pin terminal strip for CANopen		525634	FBA-1-SL-5POL
	Terminal strip, 5-pin, for DeviceNet/CANopen		525635	FBSD-KL-2x5POL
	Straight plug, M12x1	5-pin, for CANopen	175380	FBS-M12-5GS-PG9
		4-pin, D-coded for EtherCAT	543109	NECU-M-S-D12G4-C2-ET
		5-pin, compatible with FBA-2-M12-5POL-RK for PROFIBUS	1066354	NECU-M-S-B12G5-C2-PB
	Straight socket, M12x1, 5-pin, for assembling a connecting cable compatible with FBA-2-M12-5POL-RK for PROFIBUS		1067905	NECU-M-B12G5-C2-PB
	Terminating resistor, M12, B-coded for PROFIBUS		1072128	CACR-S-B12G5-220-PB
<b>Plug socket</b>				
	For power supply, M12x1, 5-pin, B-coded for CANopen/DeviceNet	538999	NTSD-GD-9-M12-5POL-RK	
		18324	FBSD-GD-9-5POL	
<b>Inscription label</b>				
	For bus node	565306	ASLR-C-E4
