Functional principle

General

By arranging 2, 3 or 4 cylinders with the same piston diameter and stroke in series, the force in the advance stroke (thrust) can be doubled, tripled or quadrupled in comparison to a conventional cylinder.

DNCT

- A maximum of 2 cylinders can be combined
- As with the thrust, the force of the return stroke is double that of a single cylinder with corresponding piston diameter.

ADNH

- A maximum of 4 cylinders can be combined
- Owing to the internal compressed air distribution, a total of just 2 connections is required to pressurise all cylinders.
- The force of the return stroke corresponds to that of a single cylinder with corresponding piston diameter.
- Operation with external limit stop only. The cylinder should not advance to the forward end position.

2) Corrosion resistance class CRC 1 to Festo standard FN 940070

Low corrosion stress. Dry indoor application or transport and storage protection. Also applies to parts behind covers, in the non-visible interior area, and parts which are covered in the application (e.g. drive trunnions).

Corrosion resistance class CRC 3 to Festo standard FN 940070

High corrosion stress. Outdoor exposure under moderate corrosive conditions. Externally visible parts with primarily functional surface requirements which are in direct contact with a normal industrial environment.
