

## Motor controllers CMMP-AS, for servo motors

FESTO

# Motor controllers CMMP-AS, for servo motors

Key features

**FESTO**

Comparison of motor controllers		
Motor controller for motor type	CMMP-AS Servo motor	CMMS-ST Stepper motor
Positioning records	255	63
Measuring system	Analogue/incremental/absolute	Incremental
Extended I/O interface	Flexibly configurable	4 working modes
Notification of remaining distance	Separately for all positions	1 for n
Torque reduction	Separately for all positions	No
Record linking	With branching	Linear
STO/SS1	To EN 61800-5-2	To EN 61800-5-2

## Features

### Compactness

- Small dimensions
- Full integration of all components for controller and power section, including RS232 and CANopen interface
- Integrated brake chopper
- Integrated EMC filters
- Automatic actuation for a holding brake
- Complies with the current CE and EN standards without additional external measures (motor cable length of up to 25 m)

### Motion control

- Digital absolute shaft encoder (EnDat/HIPERFACE) in single-turn and multi-turn versions
- Can be operated as a torque, speed or position controller
- Integrated position controller
- Time-optimised (trapezoidal) or jerk-free (S-shaped) positioning

- Absolute and relative movements
- Point-to-point positioning with and without motion path smoothing
- Position synchronisation
- Electronic gear unit
- 255 positioning records
- Wide range of homing methods

### Fieldbus interfaces

Integrated:

Optional:

### Input/output

- Freely programmable I/Os
- High-resolution 16-bit analogue input
- Jog/teach mode
- Simple linking to a higher-level controller via I/O or fieldbus
- Synchronous operation
- Master/slave mode
- Additional I/Os with the plug-in card CAMC-D-8E8A → 13

### Integrated sequence control

- Automatic sequence of positioning records without a higher-level controller
- Linear and cyclical position sequences
- Adjustable delay times
- Branches and wait positions
- Overlapping restart possible during the movement

PROFIBUS®, DeviceNet®, CANopen®, EtherCAT®, SERCOS® is a registered trademark of its respective trademark holder in certain countries.

# Motor controllers CMMP-AS, for servo motors

FESTO

Key features

## Features

### Integrated safety functions

- The motor controller CMMP-AS supports the "Safe Torque off (STO)" and, by providing a reliable time delay, also supports "Safe Stop 1 (SS1)" safety functions with protection against unexpected start-up in accordance with EN 61800-5-2
- Protection against unexpected start-up

- Two-channel disconnection of the output stage
- Less external circuitry
- Shorter response times in the event of an error
- Faster restart, intermediate circuit remains charged

### Interpolating multi-axis movement

- With a suitable controller, the CMMP-AS can perform path movements with interpolation via CANopen or Sercos. The controller specifies setpoint position values in

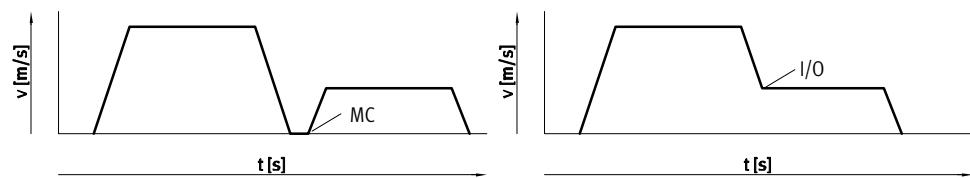

a fixed time pattern to this end. In between, the servo position controller independently interpolates the data values between two data points.

## Travel program

- Linking of any number of positioning records into a travel program
- Step criteria for the travel program possible via digital inputs, for example

MC – motion complete

I/O – digital inputs

## Library for EPLAN

EPLAN macros for fast and reliable planning of electrical projects in combination with motor controllers,

motors and cables. This enables a high level of planning reliability, standardisation of

documentation, no need to create symbols, graphics and master data.

## Cam disc functionality

→ 15

The "electronic cam disc" application type creates optimised motion profiles that generate less vibration and acceleration force at the machine. In addition, the motion of the motor is always synchronous in position with a master axis, which enables easy definition of overlapping, time-optimised motion sequences.

To be able to use the cam disc function, you will need the Festo Configuration Tool (FCT) and also the curve editor → 15.

### Key features:

- High flexibility of the system. The mechanism does not need to be modified if the requirements for the curve shapes change.
- User-friendly motion plan editor. All limits for position, speed and acceleration are immediately displayed in the editor.
- Up to 16 cam discs with a total of up to 2048 data points can be managed. The data points can be randomly distributed along the cam discs.
- There are four digital trip cams coupled with each cam disc.
- Each cam disc can be offset by a certain amount from the master axis.

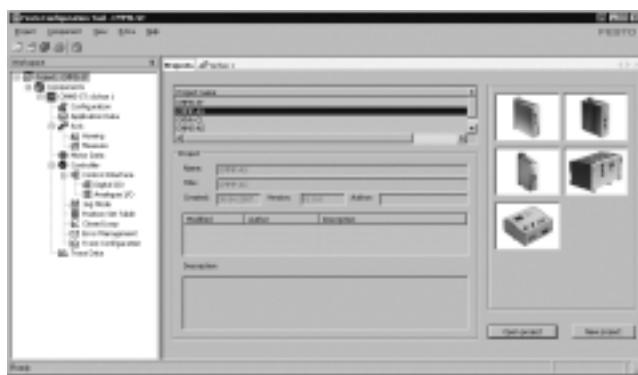

# Motor controllers CMMP-AS, for servo motors

FESTO

Key features

## FCT software – Festo Configuration Tool

Software platform for electric drives from Festo

- All drives in a system can be managed and saved in a common project
- Project and data management for all supported device types
- Simple to use thanks to graphically supported parameter entry
- Universal mode of operation for all drives
- Working offline at your desk or online at the machine

## FHPP – Festo Handling and Positioning Profile

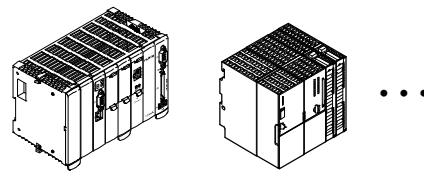

Optimised data profile

Festo has developed an optimised data profile, the "Festo Handling and Positioning Profile (FHPP)", that is tailored to handling and positioning applications.

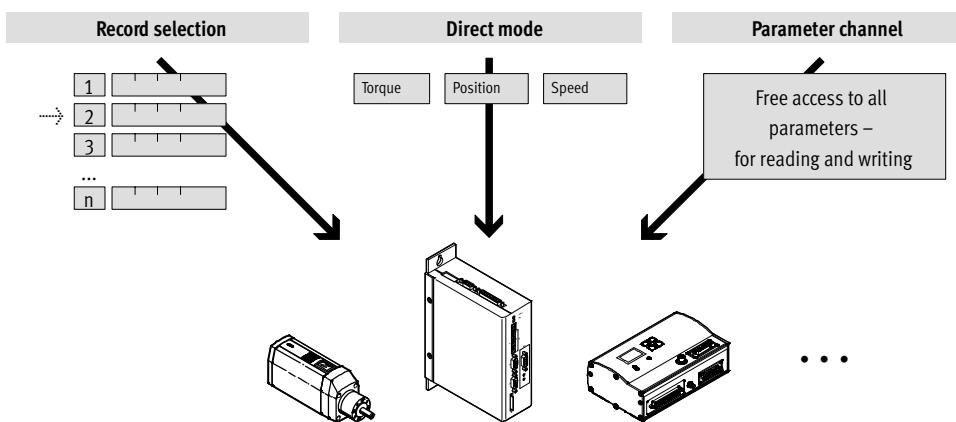

The FHPP data profile permits the actuation of Festo motor controllers, using a fieldbus interface, via standardised control and status bytes.

The following are defined, among others:

- Operating modes
- I/O data structure
- Parameter objects
- Sequence control

Fieldbus communication
