

## Toothed belt axes ELGG

**FESTO**

## Characteristics

### At a glance

- Toothed belt axis with two opposing slides
- Optimum price/performance ratio
- Ready-to-install unit for quick and easy design
- High reliability thanks to tested service life of 2500 km per slide
- Motor mounting possible on 4 sides with identical mounting accessories
- Complete kit for a simple and space-saving solution for end-position sensing
- Plain-bearing guide
  - For small loads
  - Restricted operating behaviour with torque load
  - Guide not backlash-free
- Recirculating ball bearing guide
  - For medium loads
  - Very good operating behaviour with torque load
  - Backlash-free guide (preloaded guide elements)

### Opposing movement, controlled via a motor

Optionally with central support to increase the forces and torques per slide.

### Application examples

- Suitable for sorting, separating and spreading
- For opening doors
- For gripping tasks with small loads
- Positioning and handling with low process forces
- Centring and aligning

### Characteristic values of the axes

The specifications shown in the table are maximum values.

The precise values for each of the variants can be found in the relevant data sheet.

Design	Size	Working stroke per slide [mm]	Velocity [m/s]	Repetition accuracy [mm]	Feed force <sup>1)</sup> [N]	Guide characteristics Forces and torques				
						F <sub>y</sub> [N]	F <sub>z</sub> [N]	M <sub>x</sub> [Nm]	M <sub>y</sub> [Nm]	M <sub>z</sub> [Nm]

## Characteristics

### Complete system comprising toothed belt axis, motor, motor controller and motor mounting kit

Toothed belt axis with recirculating ball bearing guide or plain-bearing guide

#### Motor

→ Page 18

Servo motor:  
EMMT-AS, EMME-AS, EMMS-AS  
Stepper motor:  
EMMS-ST

#### Note

A range of specially matched complete solutions is available for the toothed belt axis ELGG and the motors.

#### Servo drive

Servo drive:  
CMMT-AS  
Servo drive for extra-low voltage:  
CMMT-ST

#### Motor mounting kit

→ Page 18

Kit comprising:

- Motor flange
- Coupling housing
- Coupling
- Screws
- Slot nuts

## Data sheet

-  Size  
35 ... 55
-  Stroke length  
50 ... 1200 mm
-  [www.festo.com](http://www.festo.com)

**General technical data**

Size	35	45	55
Design	Electromechanical linear axis with toothed belt		
Guide	Recirculating ball bearing guide Plain-bearing guide		
Mounting position	Any		
Working stroke per slide [mm]	50 ... 700	50 ... 900	50 ... 1200 <sup>1)</sup>
Max. feed force $F_x^{2)}$ [N]	50	100	350
Max. no-load torque [Nm]	0.18	0.3	0.5
Max. driving torque [Nm]	0.46	1.24	5
Max. no-load resistance to shifting [N]	10.8	16.1	27.9
Max. velocity			
Recirculating ball bearing guide [m/s]	3		
Plain-bearing guide [m/s]	1		
Max. acceleration <sup>3)</sup> [m/s <sup>2</sup> ]	50		
Repetition accuracy [mm]	±0.1		

1) The maximum stroke is 1190 mm in combination with extended slide

2) Combined feed force of both slides

3) The max. acceleration is dependent on the moving mass, the driving torque and the max. feed force

**Operating and environmental conditions**

Ambient temperature		
Recirculating ball bearing guide [°C]	-10 ... +50	
Plain-bearing guide [°C]	0 ... +40	
Degree of protection	IP20	
Duty cycle [%]	100	

**Weight [kg]**

Size	35	45	55
<b>Recirculating ball bearing guide</b>			
Basic weight with 0 mm stroke <sup>1)</sup>			
Standard slide	1.9	4.2	7.2
Long slide	2.6	6.0	10.3
Additional weight per 1000 mm stroke	4.9	10.0	15.6
Moving mass	0.8	1.7	2.9
Slide			
Standard slide	0.8	1.7	2.9
Long slide	1.3	3.0	5.2
Additional slide	0.6	1.5	2.6
Central support	0.2	0.5	0.7

1) Including 2 slides, without central support

## Data sheet

<b>Weight [kg]</b>			
Size	35	45	55
<b>Plain-bearing guide</b>			
Basic weight with 0 mm stroke <sup>1)</sup>			
Standard slide	1.9	4.3	7.2
Long slide	2.7	6.2	10.8
Additional weight per 1000 mm stroke	4.9	10.0	15.6
Moving mass	0.8	1.7	3.0
Slide			
Standard slide	0.8	1.7	3.0
Long slide	1.5	3.2	5.6
Additional slide	0.6	1.5	2.6
Central support	0.2	0.5	0.7

1) Including 2 slides, without central support

<b>Toothed belt</b>			
Size	35	45	55
Pitch [mm]	2	3	3
Elongation [%]	0.094	0.08	0.21
Width [mm]	10	15	19.3
Effective diameter [mm]	18.46	24.83	28.65
Feed constant [mm/rev]	58	78	90

<b>Mass moment of inertia</b>			
Size	35	45	55
$J_0$			
Standard slide [kg mm <sup>2</sup> ]	76.12	289.55	656.98
Long slide [kg mm <sup>2</sup> ]	128.6	522.01	1212.78
$J_S$ per meter stroke [kg mm <sup>2</sup> /m]	0.26	1.1	1.9
$J_L$ per kg payload [kg mm <sup>2</sup> /kg]	85	154	205
$J_W$ Additional slide [kg mm <sup>2</sup> ]	55	224	533

The mass moment of inertia  $J_A$  of the entire axis is calculated as follows:

$$J_A = J_0 + K \times J_W + J_S \times \text{working stroke [m]} + J_L \times m_{\text{payload [kg]}}$$

$K$  = Number of additional slides

## Data sheet

## Materials

## Sectional view

Axis		
[1]	Bearing cap, profile	Anodised wrought aluminium alloy
[2]	Guide rods	Hardened and hard-chromium plated tempered steel
[3]	Slide, profile	Anodised wrought aluminium alloy
[4]	Toothed belt clamping component	Beryllium copper
[5]	Toothed belt	Polychloroprene with glass cord and nylon coating
[6]	Belt pulley	High-alloy stainless steel
	Note on materials	RoHS-compliant
		Contains paint-wetting impairment substances

## Data sheet

### Characteristic load values

The indicated forces and torques refer to the centre of the guide. The point of application of force is the point where the centre of the guide and the longitudinal centre of the slide intersect.

These values must not be exceeded during dynamic operation. Special attention must be paid to the deceleration phase.

#### Without central support

If the axis is subjected to two or more of the indicated forces and torques simultaneously, the following equation must be satisfied in addition to the indicated maximum loads:

#### Without central support

Calculating the load comparison factor:

$$f_v = \frac{|F_{y1} + F_{y2}|}{F_{y3}} + \frac{|F_{z1} + F_{z2}|}{F_{z3}} + \frac{|M_{x1} + M_{x2}|}{M_{x3}} + \frac{|M_{y1} + M_{y2}|}{M_{y3}} + \frac{|M_{z1} + M_{z2}|}{M_{z3}} \leq 1$$

$F_1/M_1$  dynamic values  
 $F_2/M_2$  dynamic values  
 $F_3/M_3$  maximum values

#### With central support

Calculating the load comparison factor:

$$f_v = \frac{|F_{y1}|}{F_{y3}} + \frac{|F_{z1}|}{F_{z3}} + \frac{|M_{x1}|}{M_{x3}} + \frac{|M_{y1}|}{M_{y3}} + \frac{|M_{z1}|}{M_{z3}} \leq 1 \quad f_v = \frac{|F_{y2}|}{F_{y3}} + \frac{|F_{z2}|}{F_{z3}} + \frac{|M_{x2}|}{M_{x3}} + \frac{|M_{y2}|}{M_{y3}} + \frac{|M_{z2}|}{M_{z3}} \leq 1$$

$F_1/M_1$  dynamic values  
 $F_2/M_2$  dynamic values  
 $F_3/M_3$  maximum values

### Permissible forces and torques for a service life of 2500 km per slide

Guide	Plain-bearing guide			Recirculating ball bearing guide		
	35	45	55	35	45	55
$F_{y_{max}}, F_{z_{max}}$ [N]	50	100	300	50	100	300
Standard slide						
$M_{x_{max}}$ [Nm]	1	2.5	5	2.5	5	15
$M_{y_{max}}$ [Nm]	4	8	16	8	16	48
$M_{z_{max}}$ [Nm]	4	8	16	8	16	48
Long slide						
$M_{x_{max}}$ [Nm]	1	2.5	5	2.5	5	15
$M_{y_{max}}$ [Nm]	10	20	40	20	40	124
$M_{z_{max}}$ [Nm]	10	20	40	20	40	124

## Data sheet

## Service life

The service life of the guide depends on the load. To provide a rough indication of the service life of the guide, the graph below plots the load comparison factor  $f_v$  against the service life.

These values are only theoretical. You must consult your local contact person at Festo for load comparison factors  $f_v$  greater than 1.5.

Load comparison factor  $f_v$  as a function of service life

Example:

A user wants to move an X kg load. Using the formula → page 10 gives a value of 1.5 for the load comparison factor  $f_v$ . According to the graph, the guide would have a service life of approx. 750 km. Reducing the acceleration reduces the  $M_z$  and  $M_y$  values. A load comparison factor of 1 now gives a service life of 2500 km.

## Note

Engineering software  
PositioningDrives  
www.festo.com

Max. acceleration  $a$  as a function of applied load  $m$ 

ELGG-35

ELGG-45

ELGG-55

## Note

For the plain-bearing guide (GF) it is recommended to reduce the acceleration to minimise overshings and increase positioning accuracy.

Minimum nominal stroke

With standard slide or long slide L with additional slide ZB

Size	35		45		55		
Variant	-/L	ZB	-/L	ZB	-/L	ZB	
Min. nominal stroke	[mm]	50	126	50	146	50	166

## Data sheet

### Stroke reserve

L18 = Nominal stroke  
L19 = Stroke reserve

- The stroke reserve is a safety distance from the mechanical end position and is not used in normal operation
- The sum of the nominal stroke and 2x stroke reserve must not exceed the maximum permissible working stroke per slide
- The stroke reserve length can be freely selected
- The stroke reserve is defined via the "stroke reserve" characteristic in the modular product system.

#### Example:

Type ELGG-TB-45-500-20H-...  
Nominal stroke = 500 mm  
2x stroke reserve = 40 mm  
Working stroke per slide = 540 mm  
(540 mm = 500 mm + 2x 20 mm)

### Working stroke reduction

With standard slide or long slide L with additional slide ZB

L7 = Slide length  
L16 = Distance between the two slides  
L17 = Additional slide length

- For a toothed belt axis with additional slide, the working stroke is reduced by the length of the additional slide and the distance between the two slides
- If the variant long slide L is ordered, the additional slide is not extended

#### Example:

Type ELGG-TB-35-500-...-ZR  
Working stroke = 500 mm  
L16 = 10 mm  
L7 = 146 mm  
L17 = 76 mm

Working stroke per slide with additional slide = 414 mm  
(500 mm – 10 mm – 76 mm)

### Dimensions – Additional slide

Size	35	45	55
Length L17 [mm]	76	96	116
Distance between the slides L16 [mm]	≥ 0		

### 2nd moments of area

Size	35	45	55
ly [mm <sup>4</sup> ]	4.19x10 <sup>3</sup>	17.95x10 <sup>3</sup>	41.18x10 <sup>3</sup>
lz [mm <sup>4</sup> ]	3.77x10 <sup>3</sup>	15.71x10 <sup>3</sup>	38.35x10 <sup>3</sup>

### Recommended deflection limits

Adherence to a maximum deflection of 0.5 mm is recommended so as not to impair the functionality of the axes. Greater deformation can result in increased friction, greater wear and reduced service life.

## Accessories

### Profile mounting MUE (order code MA)

Material:  
Anodised aluminium  
RoHS-compliant

**Note**

The central support can also be attached using the profile mounting.

#### Dimensions and ordering data

For size	B1	B2	B3	B5	D1 ∅	D2 ∅ H7	H1	H2	H3	H4

### Sensor bracket EAPM-...-SHS, switch lug EAPM-...-SLS (order code SA/SB)

Material:  
Switch lug: galvanised steel  
Sensor bracket: anodised wrought  
aluminium alloy  
RoHS-compliant

**Note**

The sensor bracket can also be mounted on the central support.

#### Dimensions and ordering data
