Rotary drive units ERMS

FESTO

This product is also available as a modular mechanical system
Rotary drive ERMO

Key features

At a glance
Plug and work with the Simplified Motion Series

IO-Link

The simplicity of pneumatics is now combined for the first time with the advantages of electric automation thanks to the Simplified Motion Series. These integrated drives are the perfect solution for all users who are looking for an electric alternative for very simple movement and positioning tasks between two mechanical end positions, but don't want the commissioning process for traditional electric drive systems that can often be quite complex.

There is no need for any software since operation is simply based on the "plug and work" principle. Digital I/O (DIO) and IO-Link are always automatically included – a product with two types of control as standard.

| Integrated	Easy	Standardised	Connected
The integrated electronics in the drive are at the heart of the Simplified Motion Series.	For commissioning, simply set all relevant parameters directly on the drive: • Speed and force • Reference end position and cushioning • Manual operation	Electrical connection via M12 plug design • Power (4-pin): power supply for the motor • Logic (8-pin): control signal, sensor signal and power for the integrated electronics	Use of extended functions possible via IO-Link: • Remote configuration of motion parameters • Copy and backup function for transferring parameters • Read function for extended process parameters • Freely definable intermediate position • Firmware update

The functions of the Simplified Motion Series

Basic profile for movement between two end positions: with speed control

Extended motion profile for simplified press-fitting and clamping functions: with speed and force control
• These drives are designed for simple movements between two end positions.
• Proximity switches are required in order to implement any intermediate positions.
• With the intermediate position that can be freely configured via IO-Link, movements can be stopped at a freely defined point between the end positions, without the need for proximity switches or external stops
Key features

At a glance

- Without external servo drive: all the necessary electronic components are combined in the integrated drive
- Two control options integrated as standard: digital I/O and IO-Link
- Complete solution for simple movements between mechanical end positions
- Simplified commissioning: all parameters can be manually set directly on the drive
- No special expertise required for commissioning
- End-position feedback similar to that of a conventional proximity switch is integrated as standard
- Sealed hollow shaft for the integrated through-feed of cables and tubing
- Standardised mounting interface for direct connection to the electric mini slides EGSL, EGSC and EGSS

The products in the Simplified Motion Series

Electric cylinder unit EPCE	Electric cylinder unit EPCS	Electric cylinder unit with parallel motor mounting EPCS	

Mini slide unit EGSS-BS-KF	Mini slide unit with parallel motor mounting EGSS-BS-KF	Spindle axis unit ELGS-BS-KF	Spindle axis unit with parallel motor mounting ELGS-BS-KF
Toothed belt axis unit ELGS-TB-KF	Toothed belt axis unit ELGE	Rotary drive unit ERMS

Modular and flexible with motor, motor mounting kit and servo drive

This product is also available within the Optimised Motion Series as rotary drive ERMO:

Rotary drive and motor in one unit. Compact and powerful rotating and swivelling with no limits. Sturdy and precise thanks to backlash-free ball bearing.

- Rotary drive in 4 sizes for torque of up to 5 Nm
- Hollow shaft for energy through-feed for attachments
- Optional pneumatic or electric energy chain
- Optional proximity switch for homing or position sensing
- Holding brake optional
- Modular: individual combinations with servo drive

Key features

Possible combinations with Festo drives

Rotary drive unit ERMS on electric cylinder EPCO
Size			Accessories

Pin allocation

Power supply

Plug
M12x1, 4-pin, T-coded to EN 61076-2-111

| Pin	Function
1	Power voltage supply (24 V DC)
2	Reference potential, power voltage supply (GND)
3	Reserved, do not connect
4	Functional earth (FE)

Logic interface

Plug
M12x1, 8-pin, A-coded to EN 61076-2-101

When used with digital I/O	
Pin	Function
1	Logic voltage supply (24 V DC)
2	Digital output 1 (State "In")
3	Digital output 2 (State "Out")
4	Reference potential, logic voltage supply (GND)
5	Digital input 1 (Move "In")
6	Digital input 2 (Move "Out")
7	Reserved, do not connect
8	Reference potential, logic voltage supply (GND)

When used with IO-Link	
Pin	Function
1	L+ IO-Link power supply (24 V DC)
2	Reserved, do not connect
3	C/Q communication with the IO-Link master
4	L – Reference potential, IO-Link power supply (0 V)
5	Reserved, do not connect
6	Reserved, do not connect
7	Reserved, do not connect
8	L – Reference potential, IO-Link power supply (0 V)

Datasheet

**Sizing example**

Application data:
- Mass moment of inertia: 100 kgcm^2
- Mounting position: horizontal
- Rotation angle: 180°
- Max. permitted positioning time: 1 s (one direction)

Step 1: Selecting the possible size from the table ➜ page 8

Mechanical data

| Size	25	32
Permissible mass moment of inertia [kgcm^2]	65	164

➜ Smallest possible size: ERMS-32-180

Step 2: Selecting the max. speed level v for mass moment of inertia
➜ Max. speed level for payload: level 10

Step 3: Reading off the min. positioning time t for rotation angle

——— 90°
─·─·─·─ 180°
➜ Min. positioning time for 180° at level 10: 0.5 s

Result

The application can be implemented using ERMS-32-180. A minimum positioning time (one direction) of 0.5 s is achieved. Longer positioning times can be selected at any time using a lower speed level.
