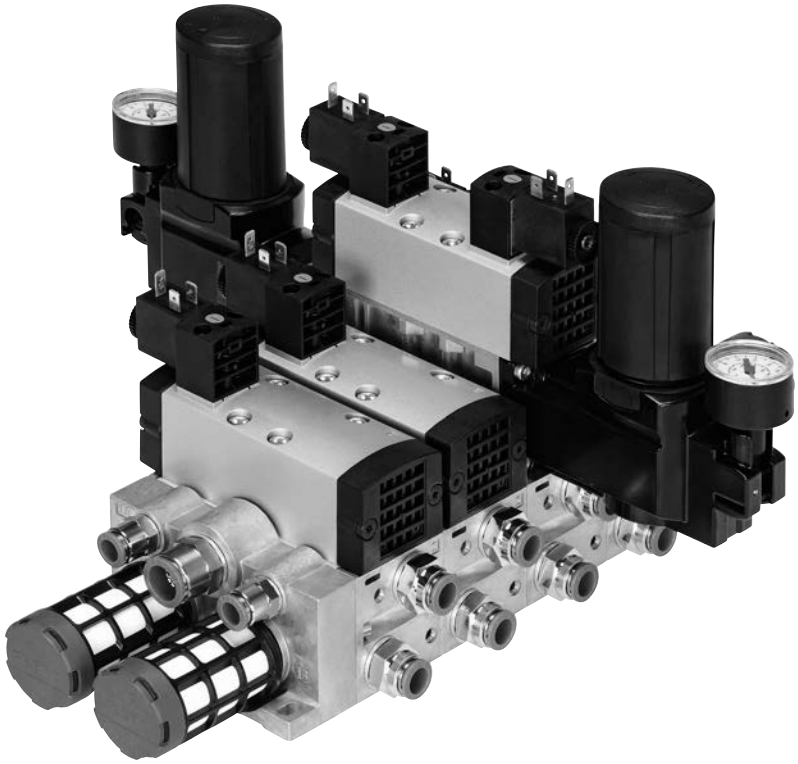
Standards-based valves, to ISO 5599-1

★	Festo Core Range Solves the majority of your automation tasks	With the Festo Core Range, we have selected the most important products and functions from our broad product catalogue, and added the quickest delivery.
Worldwide:	Quickest delivery – wherever, whenever	The Core Range offers you the best value for your automation tasks.
Simply good:	Expected high Festo quality	
Fast:	Easy and fast to select	

Just look for the star!

Key features



Innovative

- High-performance valves in a sturdy metal housing
- Individual electrical connection via square plug sockets or centrally for each valve via round plug sockets
- Valve replacement under pressure possible using vertical pressure shut-off plate
- Reverse operation
- Vacuum operation

Flexible

- Modular system offering a range of configuration options
- Conversions and extensions are possible at any time
- Integration of innovative function modules possible
  - Pressure regulator plate
  - Throttle plate
  - Vertical pressure shut-off plate
  - Vertical supply plate
- Vertical supply plates permit a flexible air supply and variable pressure zones
- Wide range of valve functions
- Extensive operating voltage range from 12 V DC to 230 V AC

Reliable

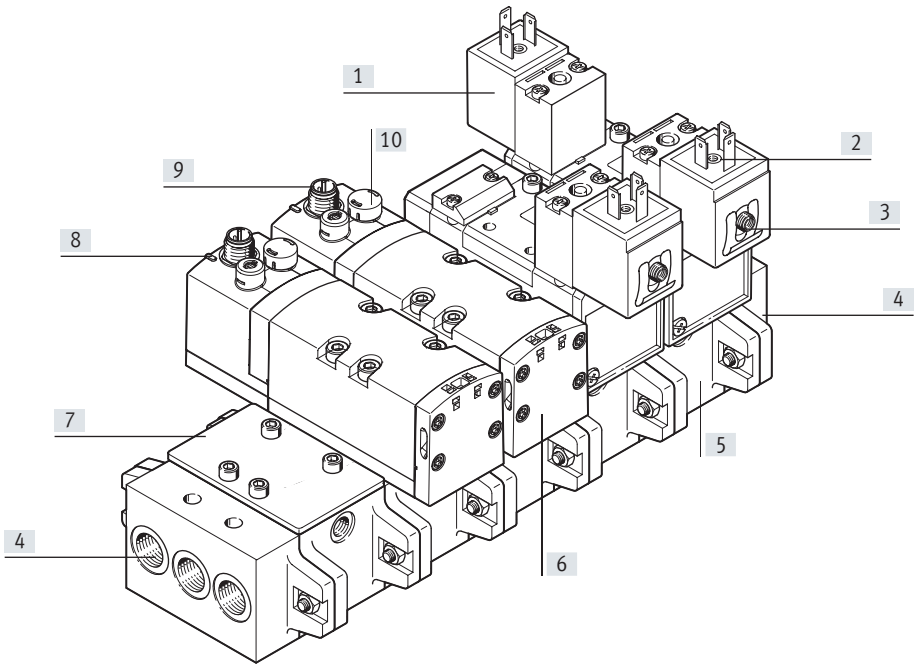
- Sturdy and durable metal components
  - Valves
  - Horizontally linked sub-bases
  - Vertically stacked sub-bases
- Fast troubleshooting thanks to LED in the plug socket or illuminating seal
- LED integrated in the valve with the round plug variant
- Reliable servicing thanks to valves that can be replaced quickly and easily
- Manual override
- Durable thanks to tried-and-tested piston spool valves

Easy to install

- Plug-in pressure gauges on the pressure regulator plate

Key features

Simple valve manifold assembly



[1] Pilot valve with port pattern to ISO 15218
[2] Various voltages
[3] Armature tube for plug-on solenoid coils
[4] End plate
[5] Manifold sub-base
[6] Various valve functions
[7] Cover plate for vacant/expansion position
[8] Signal status display via LED
[9] 3-pin round plug
[10] Manual override

Equipment options

2x 2/2-way valve, single solenoid

- Normally closed
- Normally closed, vacuum operation possible at port 3 and 5

2x 3/2-way valve, single solenoid

- Normally open
- Normally closed
- 1x normally open, 1x normally closed
- Reverse operation possible

5/2-way valve

- Single solenoid, mechanical or pneumatic spring return
- Double solenoid
- Double solenoid, with dominant signal at port 14

5/3-way valve

- Mid-position pressurised
- Mid-position closed
- Mid-position exhausted

Operation with external pilot air supply

- For vacuum applications
- For working pressures lower than 3 bar
- For significant pressure fluctuations in the power unit. Power unit and pneumatic control unit are isolated
- For heavily lubricated air in the power section
- For manifold assemblies where the pressure zones are created via ducts 3 and 5 (not possible with 2x 3/2-way valves)
- For manifolds or pressure zones that are equipped with reversible 2x 3/2-way valves (valves on request)

Operation with internal pilot air supply

- For small pressure fluctuations in the power section
- For using pressure regulator plates in a vertical stacking construction, also in reverse operation
- As a low-cost solution

Reverse operation with compressed air supply via ducts 3 and 5

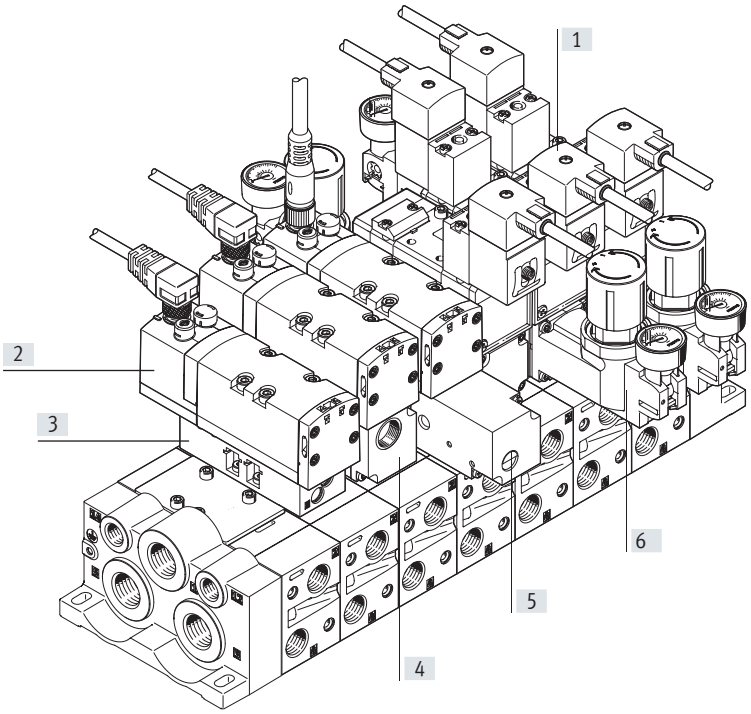
- Pressure zone separation via ducts 3 and 5
  - Example: duct 3 vacuum, duct 5 ejector pulse
  - Example: duct 3 high pressure for advancing the piston rod of a double-acting cylinder. Duct 5 low pressure for retracting the piston rod with low energy consumption
- 2x 3/2-way valves used as 5/4-way valve with controllable overlap and pressure zone separation with the reversible variant

Reverse operation with a pressure regulator plate, compressed air supply via duct 1

- Reversible pressure regulator combined with a reversible 2x 3/2-way valve regulates outputs 2 and 4
  - AB regulator for each of outputs 2 and 4
  - A regulator for output 4
  - B regulator for output 2
- Reversible pressure regulators are in the control position immediately after the power supply is switched on
  - Adjustment possible at all times
  - Dynamic response characteristics
  - Reduced regulator load because the supply pressure is maintained when the valve is switched
  - Not exhausted via the regulator

Key features

Valve manifold assembly with vertical stacking



[1] Solenoid valve with individual pilot valves and port pattern to ISO 15218, can be connected using square plug sockets
[2] Solenoid valve with central round plug
[3] Throttle plate for adjusting the speed of the drive
[4] Vertical supply plate as separate compressed air supply for a valve
[5] Vertical pressure shut-off plate for replacing solenoid valves during operation
[6] Pressure regulator for adjusting the force of the actuated drive

Vertical stacking function

Pressure regulators

- Single variant to regulate the pressure in duct 4 or 2 or 1 at the valve
- Dual variant to regulate the pressure in ducts 4 and 2 individually
- As reversible version with internally replaced ducts 1 and 3/5
- With pressure gauge connection

Throttle plate

- Designed with two throttle valves, at which the exhaust air flow rate at ducts 5 or 3 can be adjusted.
- The movement of the drive is initiated and the required speed is set via the throttle plate using the manual override on the valve.

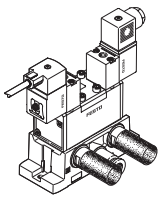
Vertical pressure shut-off plate

- Equipped with a switch via which the compressed air supply can be shut off. As a result, components mounted on the vertical pressure shut-off plate (e.g. a valve) can be replaced without switching off the overall air supply.
- If the control chain has a redundant connection, the cycle can continue even in the case of a cyclical control system.

Vertical supply plate

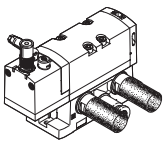
- As additional air supply for a valve
- Separates the valve from duct 1 of the manifold sub-base
- To supply an additional pressure zone

Individual connection with square plug



The directional control valve has a pilot control to ISO 15218. The solenoid coil plugged onto the armature tube can be chosen in different designs and operating voltages.

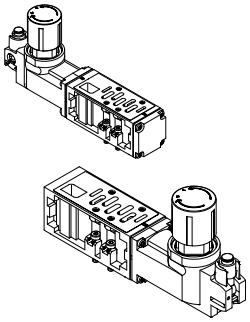
Individual connection with central round plug



The electrical connection is established via a standardised M12 plug, 24 V DC (EN 61076-2-101).

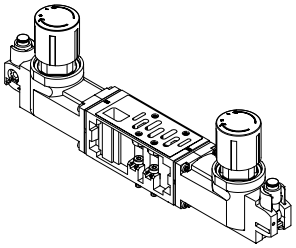
Key features

Pressure regulator with one regulated duct



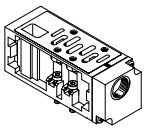
- For pressure regulation at the supply input duct 1. The set pressure is identical for ducts 2 and 4
- For pressure regulation at working port 4
  - The pressure regulator for reverse operation is supplied via duct 1 of the manifold sub-base and supplies duct 5 on the valve
  - The valve is exhausted via duct 1 to ducts 3 and 5 of the manifold sub-base
- For pressure regulation at working port 2
  - In reverse operation duct 3 is supplied here

Pressure regulator with 2 regulated ducts



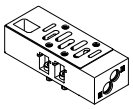
- For pressure regulation at working ports 4 and 2
- The pressure regulators for reverse operation are supplied via duct 1 of the manifold sub-base and supply ducts 5 and 3 on the valve
- The directional control valve is exhausted via duct 1 to ducts 3 and 5 of the manifold sub-base.

Vertical supply plate



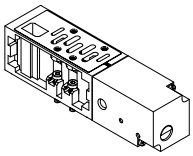
- As intermediate supply
  - For one valve
  - To supply an additional pressure zone
- Can be equipped with a valve

Throttle plate



- Exhaust air flow control valves in ducts 3 and 5
- The throttle plates act as supply-air flow control for pressure zones that are created via ducts 3 and 5

Vertical pressure shut-off plate



A switch activated with a slotted screwdriver shuts off duct 1:

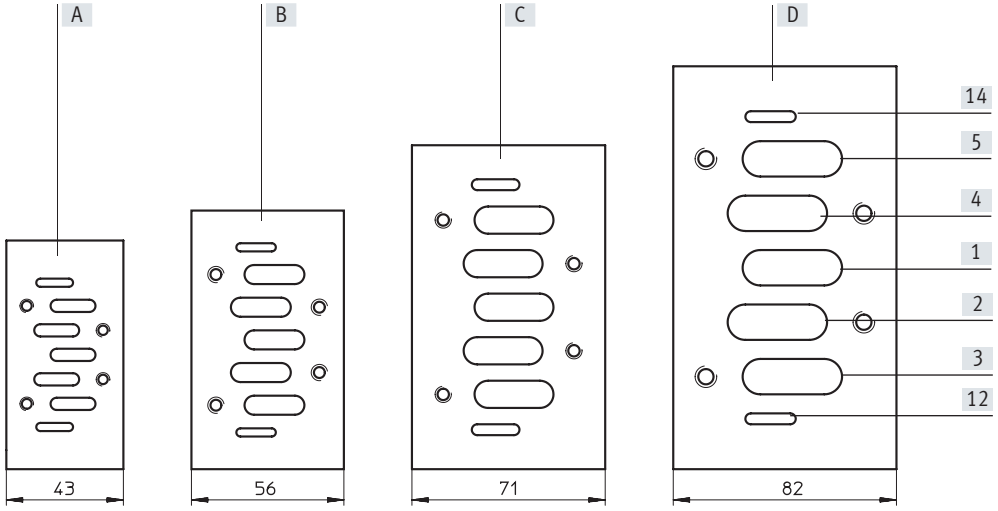
- The throttle plates, pressure regulators or valves positioned above it can be replaced
- Other components of the control chain such as drives, for example, can be replaced once the valve has been exhausted

Pressure gauge

Plugs into the pressure regulators

Key features

Port pattern on sub-base to ISO 5599-1



[A] Width 42 mm
[B] Width 52 mm
[C] Width 65 mm
[D] Width 76 mm

Sub-base port designations

Duct	Function	Description
[14]	Control unit	Pilot air supply for pilot valves 12 and 14
[5]	Power unit	Exhaust port
[4]	Power unit	Working port
[1]	Power unit	Working air supply port
[2]	Power unit	Working port
[3]	Power unit	Exhaust port
[12]	Control unit	Exhaust port for pilot air supply

Key features

Pilot air supply

The pneumatic supply ports are located on the right and left end plates and on supply plates.
The ports differ for the following types of pilot air supply:
- Internal pilot air supply
- External pilot air supply

The port for the external pilot air supply is on the right and left end plates. Internal pilot air supply takes place in the valve itself and the ports for pilot air supply are not provided on the end plates.

Note

If a gradual pressure build-up is required in the system by using a soft-start valve, then external pilot air should be selected whereby the pilot pressure is already applied at the point of switch-on.

Internal pilot air supply

Internal pilot air supply can be selected if the working pressure is between 2 and 10 bar, 3 and 10 bar, 2 and 16 bar or 3 and 16 bar, depending on the valve.

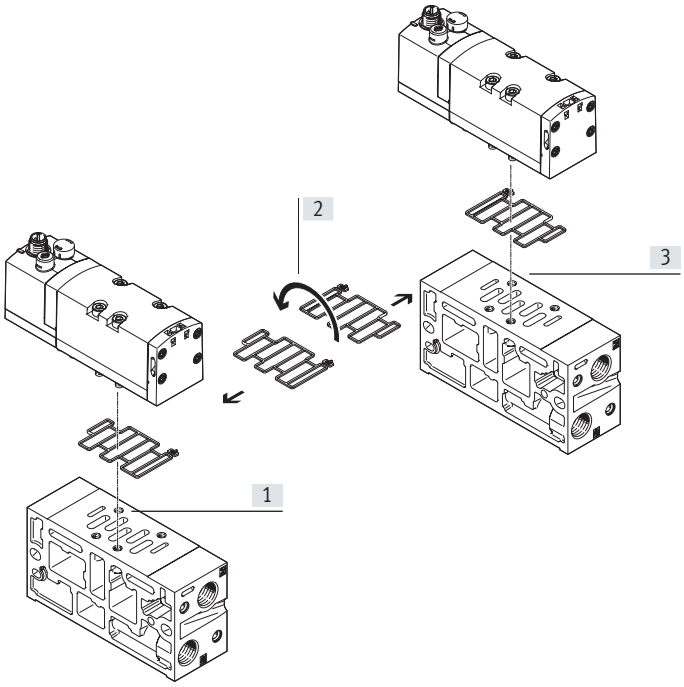
In this case the pilot air supply is branched from the compressed air supply 1 using an internal connection in the valve.

External pilot air supply

If the supply pressure is less than 2 or 3 bar, you must operate your valve manifold assembly VSVA using external pilot air supply.

The pilot air supply is then supplied via ports 12 and 14 on the end plates.

Using the seals with ducted/unducted pilot exhaust air



[1] Ducted pilot air exhaust
[2] Turning the seal by 180°
[3] Unducted pilot air exhaust (as supplied)

Valve manifold assemblies VSVA are supplied with unducted pilot air exhaust. By turning the seal between the valve and manifold block, exhaust air (pilot air) can be diverted into pilot duct 12 and can thus be ducted and silenced (see illustration).

Key features

Pilot air supply via end plates

		Description
Left end plate (graphical illustration)		
		Internal pilot air supply • Pilot air supply is branched within the valve from port 1 • Port 12 is not available • Port 14 is not available • Exhaust air via ports 3 and 5 • Pilot exhaust air via port 12
		External pilot air supply • Pilot air supply via ports 12 and 14 • Exhaust air via ports 3 and 5 • Unducted pilot exhaust air
		External pilot air supply, ducted pilot exhaust air • Pilot air supply via port 14 • Exhaust air via ports 3 and 5 • Pilot exhaust air via port 12 • For valves with central plug M12, 3-pin
Right end plate (graphical representation)		
		Internal pilot air supply • Pilot air supply is branched within the valve from port 1 • Port 12 is not available • Port 14 is not available • Exhaust air via ports 3 and 5 • Pilot exhaust air via port 12
		External pilot air supply • Pilot air supply via ports 12 and 14 • Exhaust air via ports 3 and 5 • Unducted pilot exhaust air
		External pilot air supply, ducted pilot exhaust air • Pilot air supply via port 14 • Exhaust air via ports 3 and 5 • Pilot exhaust air via port 12 • For valves with central plug M12, 3-pin

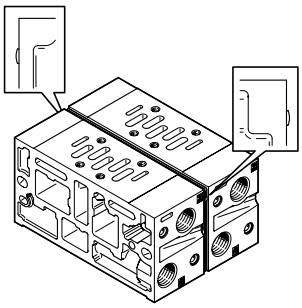
Key features

Creating pressure zones and separating exhaust air

The valve manifold assembly VSVA offers a number of options for creating pressure zones if different working pressures are required.
Pressure zones are created by isolating the internal supply ducts between the manifold sub-bases by appropriate duct separation.

Compressed air is supplied and exhausted via the end plates and supply plates.
The position of the supply plates and duct separations can be freely selected.

Duct separations are integrated ex-works as per your order.
Duct separations can be distinguished by their coding, even when the valve manifold assembly is assembled.

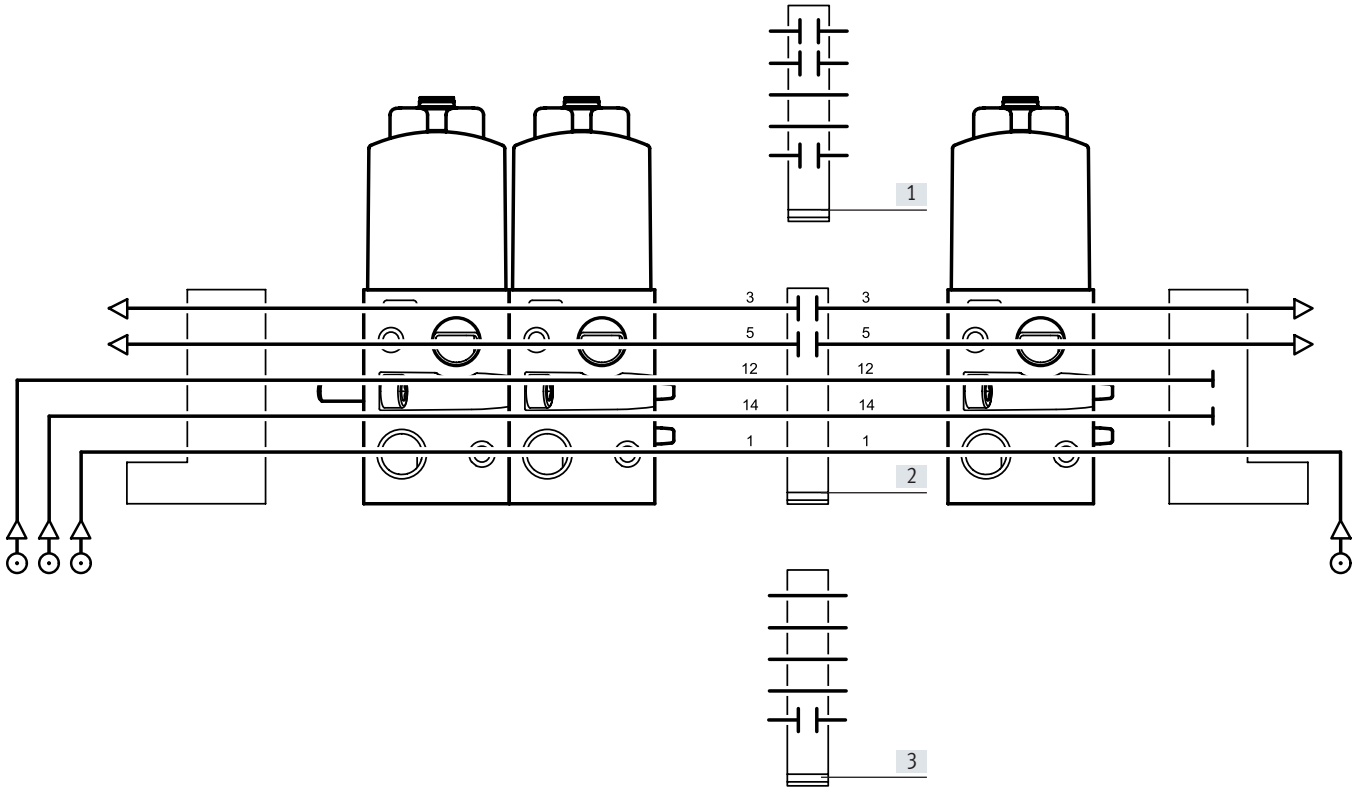


Creating pressure zones

Separating seal				Description
Coding	Sample image	Coding	Basic representation	
				Duct 1 separate • Different supply pressure for each pressure zone • Supply pressure for each pressure zone can be switched off separately
				Ducts 3 and 5 separated • The valves (for different pressure zones) do not affect each other via the exhaust ducts
				Ducts 12 and 14 separated • Different pilot pressure for each supply zone • Operation with internal and external pilot air supply possible according to pressure zone • Pilot pressure for each pressure zone can be switched off separately
				Ducts 1, 3 and 5 separated • Different supply pressure for each pressure zone • The valves (for different pressure zones) do not affect each other via the exhaust ducts • Supply pressure for each pressure zone can be switched off separately
				Ducts 1, 3, 5, 12 and 14 separated • Different supply pressure for each pressure zone • Supply pressure for each pressure zone can be switched off separately • The valves (for different pressure zones) do not affect each other via the exhaust ducts • Different pilot pressure for each supply zone • Operation with internal and external pilot air supply possible according to pressure zone • Pilot pressure for each pressure zone can be switched off separately

Key features

Examples: Creating pressure zones



[1] Pressure zone separation in ducts 1, 3 and 5. Pressure supply and exhausting via the respective end plate for each of the two pressure zones. Pilot air is supplied jointly via the left end plate.

Potential benefit:
- Two different supply pressures
- The valves do not affect each other via the exhaust ducts

[2] Pressure zone separation in ducts 3 and 5. The pressure for both pressure zones is supplied jointly via the end plates. Exhausting for each of the two pressure zones takes places separately via the respective end plate. Pilot air is supplied jointly via the left end plate.

Potential benefit:
- The valves do not affect each other via the exhaust ducts

[3] Pressure zone separation in duct 1. Pressure supply via the respective end plate for each of the two pressure zones. Both pressure zones are exhausted jointly via the end plates. Pilot air supplied jointly via the left end plate.

Potential benefit:
- Two different supply pressures

Key features

Use of 2x 3/2-way valve as 5/4-way valve

Code	Symbol	Table of values	Equivalent circuit symbol	Function
K				• Normally exhausted • The double-acting drive connected to ducts 2 and 4 is unpressurised when the valve is in the normal position and can be moved by an external force • If there is a signal at Y1(14) and Y2(12), there is pressure at ducts 2 and 4
				• Normally closed (by combining valve code K and two piloted check valves) • The piloted check valves connected to ducts 2 and 4 are unpressurised when the valve is in the normal position and the pressures in the drive close the check valves leak-tight • The drive remains stationary when the forces are in equilibrium • Leakages can only occur via the drive seals • If there is a signal at Y1(14) and Y2(12), the pressure at ducts 2 and 4 is the same
N				• Normally open • The double-acting drive connected to ducts 2 and 4 is supplied with the same pressure at both ends when the valve is in the normal position and remains stationary when the forces are balanced • If there is a signal at Y1(10) and Y2(10), ducts 2 and 4 are exhausted, the drive is unpressurised and can be moved by an external force
H				• Normally open to duct 2 • The double-acting drive connected to ducts 2 and 4 is supplied with pressure via duct 2 when the valve is in the normal position. Duct 4 is exhausted. When the system is in its initial position, the drive is thus in a clearly defined position, as would also be the case with a 5/2-way single solenoid valve • If there is a signal at Y1(14) and Y2(10), duct 2 is exhausted and there is pressure at duct 4. The drive leaves the initial position • A closed circuit can be created with this 2x 3/2-way valve by combining it with piloted check valves. However, this is then selected by an active signal at Y2(10).

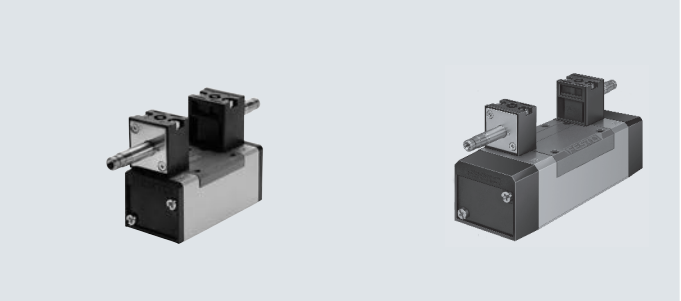
Technical data – Width 42 mm

- Flow rate
  1200 l/min



General technical data			
Design			Piston spool
Sealing principle			Soft
Actuation type			Electrical
Type of control			Piloted
Direction of flow	With external pilot air supply		Reversible
	With internal pilot air supply		Not reversible
Exhaust function			Can be throttled
Manual override			Non-detenting, detenting via accessory
Type of mounting			On sub-base, via through-hole
Mounting position			Any
Nominal size		[mm]	8
Overlap			Positive overlap
Width		[mm]	42
Grid dimension		[mm]	43
Pneumatic connections			Sub-base size 1 to ISO 5599-1
Noise level		[dB (A)]	85
Conforms to standard			ISO 5599-1
Certification	With internal pilot air supply		c UL us - Recognized (OL)
Maritime classification[1)]			See certificate

1) Corrosion resistance class CRC 0 to Festo standard FN 940070
No corrosion stress. Applies to small, visually unimportant standards-based parts such as threaded pins, circlips and clamping sleeves which are usually only available on the market in a phosphated or burnished version (and possibly oiled) as well as to ball bearings (for components < CRC 3) and plain bearings.

Note: This product conforms to ISO 1179-1 and ISO 228-1.

Accessories

End plate VABE

Materials:
Die-cast aluminium

General technical data	
Based on standard	ISO 5599-1
Suitability for vacuum	Yes
Exhaust function	Via throttle plate
Type of mounting	Via through-hole for M6 screw

Materials	
End plate	Die-cast aluminium
Note on materials	RoHS-compliant
PWIS conformity	VDMA24364-B1/B2-L

Operating and environmental conditions		
Operating medium		Compressed air to ISO 8573-1:2010 [7:4:4]
Pilot medium		Compressed air to ISO 8573-1:2010 [7:4:4]
Note on the operating/pilot medium		Lubricated operation possible (in which case lubricated operation will always be required)
Operating pressure	[MPa]	0 ... 1
	[bar]	0 ... 10
Ambient temperature	[°C]	–10 ... +50
Temperature of medium	[°C]	–10 ... +50
Storage temperature	[°C]	–20 ... +60
Corrosion resistance class CRC[1)]		0
CE marking (see declaration of conformity)[2)]		To EU Low Voltage Directive

1) Corrosion resistance class CRC 0 to Festo standard FN 940070
No corrosion stress. Applies to small, visually unimportant standards-based parts such as threaded pins, circlips and clamping sleeves which are usually only available on the market in a phosphated or burnished version (and possibly oiled) as well as to ball bearings (for components < CRC 3) and plain bearings.

Accessories

Ordering data	Description		Part No.	Type	PU[1]
Electrical accessories for valves with central plug					
	Angled socket, M12, 4-pin, type A, screw terminal	–	**12956**	**SIE-WD-TR**	**1**
	Modular system for a choice of connecting cables → Internet: nebu	0.1 ... 30 m	**–**	**NEBU-...**	**–**
	Connecting cable, straight socket, M12x1, 5-pin, open cable end, 4-wire	2.5	**550326**	**NEBU-M12G5-K-2.5-LE4**	**1**
		5	**541328**	**NEBU-M12G5-K-5-LE4**	**1**
	Connecting cable, angled socket, M12x1, 5-pin, open cable end, 4-wire	2.5	**550325**	**NEBU-M12W5-K-2.5-LE4**	**1**
		5	**541329**	**NEBU-M12W5-K-5-LE4**	**1**
Pressure gauge					
	With cartridge connection for regulator	10 bar	**543487**	**PAGN-26-16-P10**	**1**
		6 bar	**543488**	**PAGN-26-10-P10**	**1**
Seal					
	Enables the valves with central plug M12, 3-pin, to be assembled on the sub-bases of the valve terminal VTS/VTSA-F		**571343**	**VABD-S2-1-S-C**	**2**
Inscription label					
	Inscription label for valves		**161937**	**IBS-9x17**	**24**
	Clip-on inscription label holder for valve cap, for valves with central plug M12, 3-pin		**540888**	**ASCF-T-S6**	**5**
Manual override					
	Cover cap for manual override, non-detenting	For valves with central plug M12, 3-pin	**541010**	**VAMC-S6-CH**	**10**
	Cover cap for manual override, concealed	For valves with central plug M12, 3-pin	**541011**	**VAMC-S6-CS**	**10**
	Heavy-duty cover cap for manual override, non-detenting, detenting via accessory	For valves with central plug M12, 3-pin	**4105147**	**VAMC-B-S6-CTR**	**10**
	Tool for manual override	For MN1H/MFH valves	**157651**	**AHB-MD/MF/MV**	**1**
		For heavy-duty cover cap, detenting position	**1662543**	**AHB-MEB-B**	**1**
