

Bernoulli grippers OGGB

FESTO

Bernoulli grippers OGGB

Key features

FESTO

General		
Purpose	Benefits	Applications
The Bernoulli gripper OGGB is ideally suited to transporting thin, extremely delicate and brittle workpieces.	- Minimised workpiece contact, gentle workpiece handling - Low energy costs thanks to minimised air consumption - Maximum workpiece loads thanks to high suction forces - Low-noise - Reliable separation of porous and air-permeable materials - Minimal assembly and installation	- Photovoltaics (solar cell and wafer transport) - Thin film solutions - Film transport - Flat panel - Thin glass panes - Electronic circuit boards - Flexible parts with large surface areas - Air-permeable workpieces - Separation of thin and porous materials - Workpieces with textured surface

Note

Complete coverage with the gripper is recommended when using thin, delicate workpieces (e.g. films).

Functional principle

The incoming compressed air is deflected radially in the gripper and flows back out between the workpiece and gripper surface. The air is routed through a very thin gap [1] between the gripper body and the core in the gripper, which greatly accelerates its speed. The high outflow speeds generate a vacuum between the gripper and

the workpiece. Spacers hold the workpiece at a distance to ensure that the air can flow off smoothly. Vacuum generation according to the Bernoulli principle enables a wide range of workpieces to be gripped gently and with very little contact.

Variants

The gripper is available in three sizes. Two different materials can be chosen for the spacers for each size. With the first variant, all the spacers (ring shape [1] and knobs [2]) are made from POM. The second variant has ring-shaped spacers [1] made from POM and knobs ([2] and [3]) made from NBR. This second variant can absorb higher lateral forces than the

POM variant and the NBR spacers can be replaced if they become worn. Each gripper has two connection options for compressed air: one connection on the top and one alternative connection on the side. The blanking screw included is used to seal unused connections and is pre-assembled on the side as standard.

Function

-  - Diameter
60, 100, 140 mm
-  - Temperature range
0 ... +60 °C

OGGB with push-in fitting QS (not included in the scope of delivery)

General technical data				
Gripper Ø	[mm]	60	100	140
Pneumatic connection		G $\frac{1}{8}$	G $\frac{1}{8}$	G $\frac{1}{8}$
Alternative connections		G $\frac{1}{8}$	G $\frac{1}{8}$	G $\frac{1}{8}$
Connection position		On top/at side		
Type of mounting		Via female thread		
Mounting position		Any		

Operating and environmental conditions		
Operating pressure	[bar]	0 ... 6
Nominal operating pressure	[bar]	1
Operating medium		Compressed air according to ISO 8573-1:2010 [7:4:4]
Note about the operating/pilot medium		Operation with lubricated medium not possible
Ambient temperature	[°C]	0 ... +60
Temperature of medium	[°C]	0 ... +60
Corrosion resistance class CRC ¹⁾		2

1) Corrosion resistance class 2 according to Festo standard 940 070

Components subject to moderate corrosion stress. Externally visible parts with primarily decorative surface requirements which are in direct contact with a normal industrial environment or media such as coolants or lubricating agents.

Performance data							
Spacer		Standard			For high lateral forces		
Gripper Ø	[mm]	60	100	140	60	100	140
Air consumption at nominal operating pressure 1 bar	[l/min]	110					
Holding force at nominal operating pressure 1 bar	[N]	10	7	7	7	6	6
Lateral force at nominal operating pressure 1 bar	[N]	1	1	1	15	12	12
Noise level at nominal operating pressure 1 bar	[dB (A)]	65					
Sound power level at nominal operating pressure 1 bar	[dB (A)]	78					

Materials		
Spacer		For high lateral forces
Housing	Anodised wrought aluminium alloy	
Spacer	POM	
	-	Nitrile rubber
Note on materials	RoHS-compliant
