

Parallel grippers EHPS, electric

FESTO

Characteristics

At a glance

Electrically actuated

- Minimal installation effort – no valves, tubing or air preparation required
- Low noise pollution
- Electrical safety to DIN EN 61010-1:2010

Actuation

- Via digital I/O or IO-Link
- No external controller required
- Connection options:
 - For digital I/O: connection via terminal strip to terminal CPX or controller CECC
 - For IO-Link: plug for direct connection to an IO-Link master

Adjustable gripping force (4 settings)

- Adaptation of the gripping force to sensitive workpieces
- Simple adjustment
- Very powerful

Sensing option of gripper jaws

- For digital I/O: direct position sensing possible via external sensors on the gripper head
- For IO-Link: integrated position sensors for sensing the gripper jaws

Adjusting the gripping force

For gripper with digital I/O

The speed for the gripping force of the gripper can be adjusted using the rotary switch. The switch has four settings and therefore four force levels, with no intermediate levels.

The speed has an effect on the gripping force and is not linearly adjustable.

- Setting 1: approx. 50% of the max. force
- Setting 2: approx. 70% of the max. force
- Setting 3: approx. 85% of the max. force
- Setting 4: max. force

For grippers with IO-Link

The gripping force is set via an IO-Link master. The adjustment has four settings and therefore four force levels. There are no intermediate levels. (Values for settings 1 to 4 as for I/O version).

There are also three gripping modes to choose from. This allows a shorter gripping time in the application.

- External gripping: The object is gripped from the outside. The gripper jaws move with the specified gripping force/speed during the gripping process. On releasing, the gripper jaws move at the maximum speed
- Internal gripping: The object is gripped from the inside. The gripper jaws move with the specified gripping force/speed during the gripping process. On releasing, the gripper jaws move at the maximum speed
- Universal gripping: The specified gripping force is used in both directions of movement during the gripping process

Characteristics

Fast and intuitive integration on a robot arm

The gripper with robot connection EHPS-...-RA1 enables fast integration on a light-weight robot.

In order to mount the gripper on the robot arm, an adapter plate and the necessary mounting accessories are included in the kit, in addition to the gripper itself. It also contains the required proximity switches and a software plug-in (on a USB stick).

The plug-in is a simple means for integrating the gripper directly into the program sequence of the robot control system (→ page 5).

So as not to overload the internal cables of the Universal Robot, the connecting cables must be routed externally on the Universal Robot and secured using the included velcro strips.

Mounting options

At the side

Via thread

Via through-hole

On the front

Note

These grippers are not designed for the following or similar applications:

- Welding spatter

- Machining
- Aggressive media

- Grinding dust

Key features

Application example

Card handling

Sample preparation device with liquid dosing

System product for robot connection

If feature EHPS-...-RA1 is used, the delivery includes all the connection components in addition to the gripper:

- Proximity switch
- Connecting cable for connecting the gripper and proximity switches
- Velcro strip for fixing the connecting cables in place
- Adapter kit for mounting on the robot arm
- USB stick for plug-in

Data sheet

Opening and closing times [ms] as a function of setting 1 ... 4

The opening and closing times stated have been measured with vertically mounted gripper, gripper jaws pointing up and without gripper fingers.

Size Setting	16	20	25
1	337	470	580
2	291	408	507
3	271	362	449
4	245	295	404

Materials

Housing	Anodised aluminium
Gripper jaw	High-alloy stainless steel
O-ring	NBR

Pin allocation of the connector plug

For digital I/O

**Plug M12, 5 pin**

Pin	Connection	Function
1	+24 V DC	Supply voltage
2	Input 1	Gripper jaw opening (with external gripping)
3	0 V	–
4	Input 2	Gripper jaw closing (with external gripping)
5	n.c.	Not connected

For IO-Link

**Plug M12, 5 pin**

Pin	Connection	Function
1	+24 V DC sensor	Sensor: Supply voltage for IO-Link communication
2	+24 V DC actuator	Actuator: supply voltage
3	GND sensor	Sensor: Supply voltage for IO-Link communication
4	C/Q	IO-Link communication
5	GND actuator	Actuator: supply voltage

Deviation from the specification IO-Link port class B, without galvanic isolation between primary and secondary power supply. This can lead to malfunction or damage of the IO-Link master and the connected IO-Link devices.

Data sheet

Total gripping force F_H as a function of lever arm x , mounting position, external/internal gripping and setting 1 ... 4

Horizontal mounting position

Vertical mounting position

The max. achievable forces refer solely to central gripping of non-elastic components.

The gripping position and gripping force is not readjusted.

The design of the gripper jaw has a significant influence on the forces to be achieved.

For particular gripping situations, it may be necessary to transmit a further gripping signal (max. 3 in one direction).

Data sheet

Static characteristic load values at the gripper jaws

The indicated permissible forces and torques apply to a single gripper jaw. They include the lever arm, additional applied loads due to the workpiece or external gripper fingers and acceleration forces occurring during movement. The zero coordinate line (gripper jaw guide slot) must be taken into consideration when calculating the torques.

Size		16	20	25
Max. permissible force F_z	[N]	200	325	450
Max. permissible torque M_x	[Nm]	7	13	28
Max. permissible torque M_y	[Nm]	4.4	8	16
Max. permissible torque M_z	[Nm]	7	13	28

Mass moment of inertia

Under the following conditions:

- The reference point is the central axis
- Without external gripper fingers
- In a load-free state

Size		16	20	25
Mass moment of inertia	[kgcm ²]	0.78	2.02	5.24

Data sheet

Gripping force F_H per gripper jaw as a function of lever arm x and eccentricity a and b

The following formula must be used to calculate the lever arm x with eccentric gripping:

$$x = \sqrt{a^2 + b^2}$$

The gripping force F_H can be read from the graphs (→ page 10) using the calculated value x .

Calculation example

Given:

Distance $a = 40$ mm

Distance $b = 50$ mm

To be calculated:

The gripping force in setting 4, with an EHPS-16-A, used as an external gripper and in horizontal mounting position.

Approach:

Calculating the lever arm x

$$x = \sqrt{40^2 + 50^2}$$

$x = 64$ mm

The graph (→ page 10)

gives a value of $F_H = \text{approx. } 77$ N for the gripping force.

Accessories

Position transmitter

The position transmitter continuously senses the position of the gripper jaws. It has an analogue output with an output signal that is proportional to the gripper jaw position.

Ordering data – Position transmitters for T-slot

	For size	Position measuring range	Analogue output [V]	Type of mounting	Electrical connection	Cable length [m]	Part no.	Data sheets → Internet: position transmitter Type
	10 ... 35	0 ... 40	0 ... 10	Inserted in slot from above	Plug M8x1, 4-pin, in-line	0.3	553744	SMAT-8M-U-E-0,3-M8D

Ordering data – Connecting cables

	Electrical connection, left	Electrical connection, right	Cable length [m]	Part no.	Data sheets → Internet: nebu Type
	Straight socket, M8x1, 4-pin	Cable, open end, 4-wire	2.5	541342	NEBU-M8G4-K-2.5-LE4
			5	541343	NEBU-M8G4-K-5-LE4
	Angled socket, M8x1, 4-pin	Cable, open end, 4-wire	2.5	541344	NEBU-M8W4-K-2.5-LE4
			5	541345	NEBU-M8W4-K-5-LE4
