

Key features

Features

Compactness

- Small dimensions
- Full integration of all components for the controller and power section, including RS232 and CANopen interface
- Integrated brake chopper
- Integrated EMC filters
- Automatic actuation for a holding brake
- Complies with the current CE and EN standards without additional external measures (motor cable length of up to 15 m)

Bus protocols

DeviceNet.

Safety functions

- The motor controller CMMS-ST supports the "safe torque off (STO)" safety function and, by providing a reliable time delay, also supports "safe stop 1 (SS1)" with protection against unexpected start-up in accordance with the requirements of EN 61800-5-2
- Protection against unexpected start-up
- Two-channel shutdown of the power stage
- Shorter response times in the event of an error

Servo mode

• Encoder option (closed loop), in other words no step losses, following errors are corrected

Motion control

- Can be operated as a torque, rotational speed or position controller
- Integrated positioning control
- Time-optimised (trapezoidal) or jerk-free (S-shaped) positioning
- Absolute and relative movements
- · Point-to-point positioning with and without motion path smoothing
- Position synchronisation
- Electronic gear unit
- 63 position sets
- 8 positioning profiles
- Wide range of homing methods

Input/output

- Freely programmable I/Os
- High-resolution 12-bit analogue input
- Jog/teach mode
- Easy connection to a higher-order controller via I/O or fieldbus
- Synchronous operation
- Master/slave mode

Interpolating multi-axis movement

without a higher-order controllerLinear and cyclical position

· Automatic sequence of position sets

sequencesAdjustable delay times

Integrated sequence control

• With a suitable controller, the CMMS-ST can perform path movements with interpolation via CANopen. To do this, the controller specifies setpoint position values in a fixed time pattern. In between, the servo position controller independently interpolates the data values between two interpolation points.

Key features

Library for EPLAN

EPLAN macros for fast and reliable planning of electrical projects in combination with motor controllers, motors and cables. This enables a high level of planning reliability and standardisation of documentation without the need to create symbols, graphics and master data.

FHPP – Festo Handling and Positioning Profile Optimised data profile

Festo has developed an optimised data profile, the "Festo Handling and Positioning Profile (FHPP)", which is specifically tailored to handling and positioning applications.

With the FHPP data profile, Festo motor controllers can be controlled using a fieldbus interface via standardised control and status bytes.

The following are defined, among others:

- Operating modes
- I/O data structure
- Parameter objects
- Sequence control

Type codes

	 The plug assortment is included in the scope of delivery of the motor controller 		

Ordering data – Power supply units

	Description	Input voltage range [V AC]	Nominal output voltage [V DC]	Nominal output current [A]	Part no.	Туре
	Power supply for motor controller	100 240	24	5	8149580	CACN-3A-1-5-G2
				10	8149581	CACN-3A-1-10-G2
			48	5	8149583	CACN-3A-7-5-G2
				10	8149584	CACN-3A-7-10-G2
				20	8149585	CACN-11A-7-20-G2

- 📲 - Note

If a common power supply unit is used to supply the power unit and the control unit, the voltage tolerances for supplying the control unit cannot be met at high braking energies. This can result in damage to the control unit. Always use separate power supplies to supply the power unit and the control unit.
