## At a glance

### General

The electric cylinder DNCE is a mechanical linear axis with piston rod. The drive component consists of an electrically driven spindle, which converts the rotary motion of the motor into the

linear motion of the piston rod. The mechanical interfaces are largely compatible with the standard cylinder DNC.

### Properties

- Choice of spindle type:
    - With lead screw (LS)
    - With ball screw (BS)
  - Electric cylinder with lead screw spindle is self-retarding
  - Compact dimensions
- Optional:
- Protection class IP65
  - High corrosion protection
  - NSF-H1 lubricant for the food industry

### Range of applications

- Lead screw spindle
  - For applications with slow feed speeds
- Ball screw spindle
  - For applications with high feed speeds and high running performance

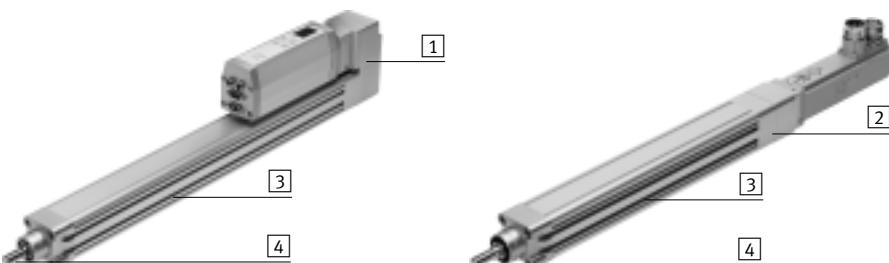

The electric cylinder is of limited suitability for the food industry.

[4] Choice of spindle type:

- With lead screw spindle (LS)
- With ball screw spindle (BS)

➔ 6

The lead screw spindle is self-retarding, which means that slow movements cannot be excluded in the event of vibration.

The entire system with intelligent motor unit MTR-DCI is self-locking.

Key features and type codes

## Longer service life with bellows kit EADB

→ 27

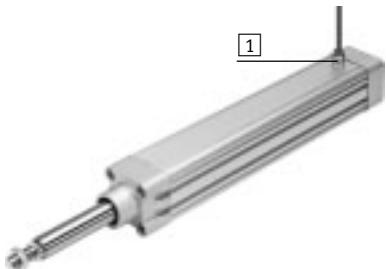

The protective bellows kit is a leak-free system. To prevent unwanted media from being drawn in, the supply and exhaust air must be ducted via a pressure compensation hole in the connection part [1].

The kit protects the piston rod, seal and bearings against a wide variety of media, for example:

- Dust
- Chippings
- Oil
- Grease
- Fuel

## Use in dusty or wet environments thanks to protection to IP65 (feature P5)

→ 17

The electric cylinder to IP65 fulfils the specifications to IEC 60 529. Air is exchanged between the interior of the cylinder and the environment via a pressure compensation hole [1] in the cylinder barrel. This prevents negative pressure or excess pressure in the interior of the cylinder.

It also prevents unwanted media being drawn in.

Protection to IP65 can only be selected in combination with DNCE-...-BS (ball screw spindle).

## Calculation of the mean feed force $F_{xm}$ for the electric cylinder DNCE with ball screw spindle (BS)

The peak feed force value must not exceed the maximum feed force within a movement cycle. In the case of vertical operation, the peak value is generally

achieved during the acceleration phase of the upwards stroke. If the maximum feed force is exceeded, this can increase wear and thus shorten

the service life of the ball screw spindle. The maximum speed must likewise not be exceeded.

$$F_x \leq F_{x\max}$$

and

$$v_x \leq v_{x\max}$$

### Mean feed force (to DIN 69 051-4)

During operation, the continuous feed force may be briefly exceeded up to

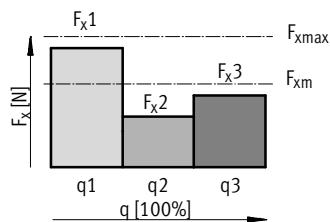

the maximum feed force. The continuous feed force must, however,

be adhered to when averaged over a movement cycle.

$$F_{xm} \leq F_{xcont}$$

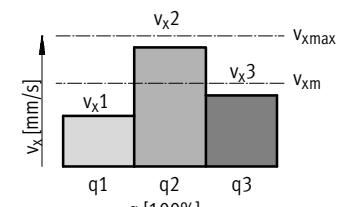

$$F_{xm} = \sqrt[3]{\sum F_x^3 \times \frac{v_x}{v_{xm}} \times \frac{q}{100}} =$$

$$F_{xm} = \sqrt[3]{F_{x1}^3 \times \frac{v_{x1}}{v_{xm}} \times \frac{q_1}{100} + F_{x2}^3 \times \frac{v_{x2}}{v_{xm}} \times \frac{q_2}{100} + F_{x3}^3 \times \frac{v_{x3}}{v_{xm}} \times \frac{q_3}{100} + \dots}$$

### Mean feed speed (to DIN 69 051-4)

$$v_{xm} = \sum v_x \times \frac{q}{100} = v_{x1} \times \frac{q_1}{100} + v_{x2} \times \frac{q_2}{100} + v_{x3} \times \frac{q_3}{100} + \dots$$

## Maximum permissible loads on the piston rod

If there are two or more forces and torques simultaneously acting on the piston rod, the following equations must be satisfied:

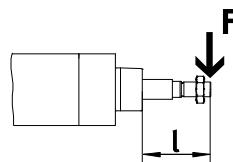

$$\frac{|F_y l|}{F_{y \max.}} + \frac{|F_z l|}{F_{z \max.}} + \frac{|M_y l|}{M_{y \max.}} + \frac{|M_z l|}{M_{z \max.}} \leq 1$$

$$|F_x l| \leq F_{x \max}$$

$$|M_x l| \leq M_{x \max}$$

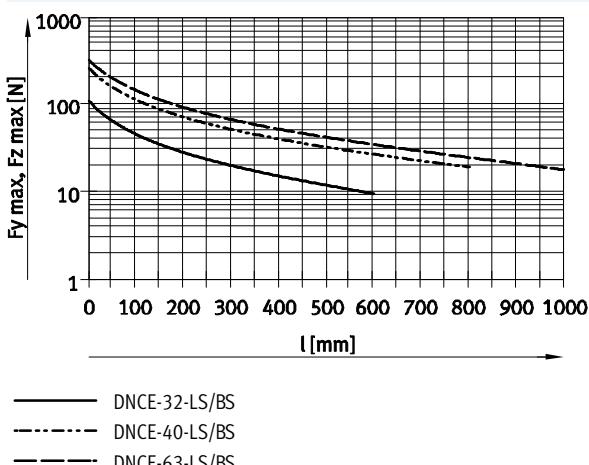

Definition of the stroke length l:

$l = \text{Stroke} + \text{value of the piston rod extension K8}$

Note

Depending on the combination of motor and drive, it may not be possible to reach the maximum feed force of the drive.

When using parallel kits, the no-load driving torque of the respective kit must be taken into consideration.

## Travel speed v as a function of tubing length l

The protective bellows kit is a leak-free system. To prevent unwanted media from being drawn in, the supply and exhaust air for the kit must be ducted via a

pressure compensation hole in the connection part [1]. The pressure generated in the protective bellows kit by the positioning motion is primarily defined by the travel

speed and tubing length. The recommended tubing length based on the travel speed of the drive can be read from the graph.

### Note

The push-in fittings in the adjacent table must be used for the pressure compensation hole.

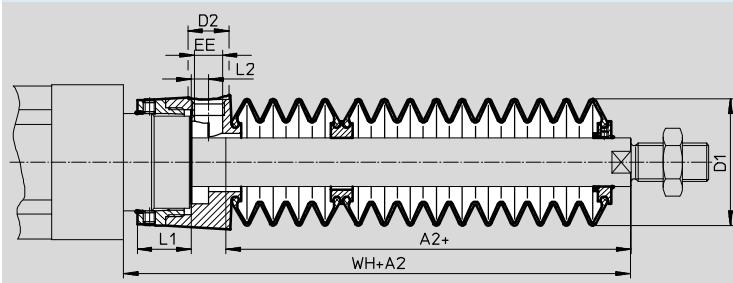

Silencers can be used as an alternative. This reduces the travel speed slightly.

## Ordering data – Protective bellows kit

An extended piston rod (order code K8) → 17 is absolutely essential when using a protective bellows kit.

The necessary dimension for K8 as a function of cylinder size and stroke as well as the corresponding protective bellows kit are indicated in the table below:

### Order example:

Selected electric cylinder:

DNCE-32-250-BS-“3”P-Q...K8

The dimension for the corresponding K8 value (see table):

88 mm

Complete type code for electric cylinder:
