

## Standards-based cylinders DSBC, to ISO 15552

**FESTO**

Festo Core Range  
Solves the majority of your automation tasks

Worldwide: Quickest delivery – wherever, whenever  
Simply good: Expected high Festo quality  
Fast: Easy and fast to select

With the Festo Core Range, we have selected the most important products and functions from our broad product catalogue, and added the quickest delivery.

The Core Range offers you the best value for your automation tasks.

Just look  
for the  
star!

## Key features

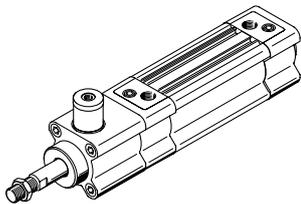

### At a glance

- Standards-based cylinders to ISO15552 (corresponds to the withdrawn standards ISO 6431, DIN ISO 6431, VDMA24562, NFE49003.1 and UNI 10290)

- Double-acting
- For contactless position sensing
- Available with protection against rotation
- EX4: for use in potentially explosive areas
- Wide range of accessories enables the cylinder to be installed virtually anywhere
- Three types of cushioning available:
  - P cushioning: elastic cushioning rings/plates at both ends
  - PPS cushioning: pneumatic cushioning, self-adjusting at both ends
  - PPV cushioning: pneumatic cushioning, adjustable at both ends
- The variants can be configured according to individual needs using a modular product system
- Excellent flexibility thanks to a wide range of variants

### DSBC....-C – with clamping unit, standard hole pattern

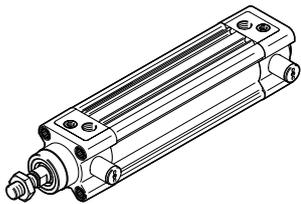

- Standard hole pattern
- Piston rod can be clamped in any position
- The piston rod can be held in position for long periods even with alternating loads, fluctuating operating pressure or leaks in the system

Additional measures are required for use in safety-related applications; in Europe, for example, the standards listed under the EC Machinery Directive must be observed.

Without additional measures in accordance with legally specified minimum requirements, the product is not suitable as a safety-related component in control systems.

### DSBC....-E1/-E2/-E3 – with end-position locking, standard hole pattern

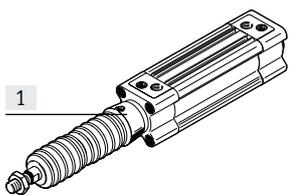

- Standard hole pattern
- Positive locking in the end position as a drop guard. In the event of a pressure drop, the piston rod is locked in its end position.
- Optionally at one or both ends

Additional measures are required for use in safety-related applications; in Europe, for example, the standards listed under the EC Machinery Directive must be observed.

Without additional measures in accordance with legally specified minimum requirements, the product is not suitable as a safety-related component in control systems.

### DSBC....-P2 – with bellows kit DADB, standard hole pattern

The bellows protects the piston rod, the seal and the bearing from the effects of a wide range of media, which has a positive impact on the service life of these components.

The bellows kit is a leak-free system. To prevent unwanted media from being drawn in, the supply and exhaust air for the kit must be ducted via a pressure compensation hole in the connection part [1].

The kit protects the piston rod, seal and bearing against a wide variety of media, for example:

- Dust
- Chippings
- Oil
- Grease
- Petrol

### Ordering the bellows kit

An extended piston rod is absolutely essential if a bellows kit is to be used. The bellows kit can be ordered via the modular product system or as an accessory. The following must be noted in this case:

#### Ordering via the modular product system:

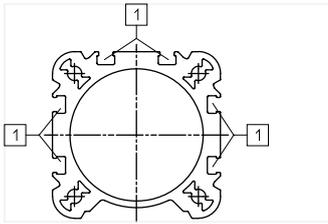

The bellows kit is supplied mounted on the bearing cap using feature P2. The required piston rod extension is automatically taken into consideration. This means that there is no need to specify a value for feature ...E.

#### Ordering as an accessory:

If the bellows kit is ordered as an accessory, the required value → page 52 must be entered for feature ...E in the modular product system.

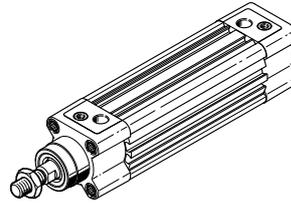

## Key features

### DSBC-...-D3 – Sensor slots on 3 sides

The piston position can be sensed on 3 sides of the drive if feature D3 is selected in the modular product system.

[1] Sensor slot for proximity switch

#### Note

DSBC-32-...-D3: Proximity switches with the mounting type “inserted in the slot lengthways” are not compatible.

### Position sensing/force control

With position transmitter SMAT, SDAT → page 63

Analogue position feedback possible

- Analogue output
  - 0 ... 10 V

With proportional-pressure regulator VPPM

Stepless adjustment of the gripping force possible

- Setpoint value input
  - 0 ... 10 V
  - 4 ... 20 mA

### For manufacturing Li-ion batteries

DSBC-...-F1A

Recommended for production plants for manufacturing Li-ion batteries. Metals with more than 1% by mass of copper, zinc or nickel are excluded from use. Exceptions are nickel in steel, chemically nickel-plated surfaces, printed circuit boards, cables, electrical plug connectors and coils.

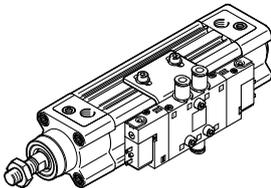

### Accessories

Please contact your Festo representative for information on which accessories are suitable for manufacturing Li-ion batteries.

### Optional accessories

Mounting kit DAVM

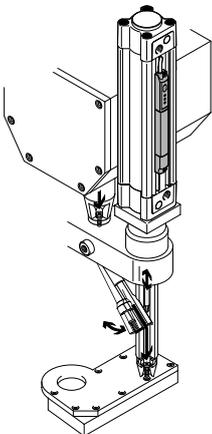

→ Page 1

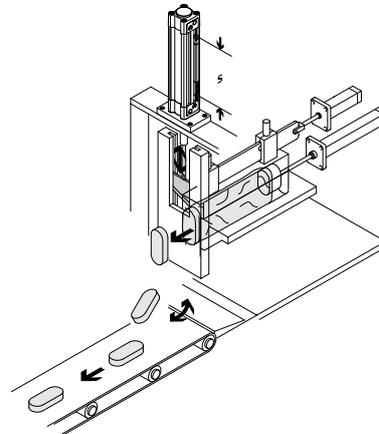

- For lateral valve mounting, directly on the drive
- Particularly suitable for decentralised use in large systems
- Mounting is only possible on the side on which the pneumatic connections are located

### Application examples

Automatic screw machine

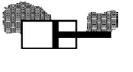

For process control

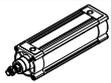

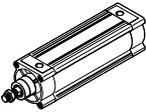

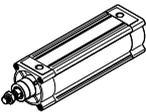

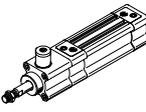

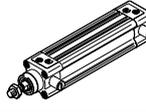

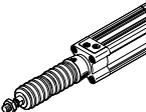

## Key features

Variants from the modular product system		
Symbol	Key features	Description
	Q Square piston rod	Protection against rotation. For position-oriented feeding
	C Clamping unit	Integrated clamping unit on the piston rod
	E1/E2/E3 End-position locking	Positive locking in the end position as a drop guard. If there is a drop in pressure, the cylinder is secured in its end position to prevent it from dropping
	L Low friction	<ul style="list-style-type: none"> <li>• Break-away pressure: low</li> <li>• Dynamic response: suitable for very fast movements, especially at low operating pressures</li> </ul> Application example: very dynamic movements with no standstill
	U Constant, slow movement	<ul style="list-style-type: none"> <li>• Break-away pressure: Very low</li> <li>• Dynamic response: suitable for very slow, constant and stick-slip-free movements</li> </ul> Application example: slow, constant feed motion
	L1 Low friction for balancer applications	<ul style="list-style-type: none"> <li>• Break-away pressure: low</li> <li>• Dynamic response: suitable for slow movements with constant application of pressure at one end. System friction is independent of operating pressure</li> </ul> Application example: mass balancing (balancer, belt tensioner with constant feed motion)
	T Through piston rod	For working at both ends with the same force in the forward and return stroke, for attaching external stops
	F Female thread on the piston rod	–

## Key features

Variants from the modular product system		
Symbol	Key features	Description
	R3 High corrosion protection	All external cylinder surfaces comply with corrosion resistance class 3 to Festo standard 940 070. The piston rod is made from corrosion- and acid-resistant steel
	T1 Heat-resistant seals	Temperature range 0 ... +120°C
	T3 Low temperature	Temperature range -40 ... +80°C
	T4 Heat-resistant seals	Temperature range 0 ... +150°C
	A1 Scraper variant	Increased chemical resistance: For longer service life, e.g. when using cooling lubricants.
	A2 Scraper variant	Hard scraper: The cylinder has a hard-chromium plated piston rod and a hard scraper, which protects against dry, dusty and viscous media
	A3 Scraper variant	Unlubricated operation: Cleaning processes degrease the piston rod. A special piston rod seal designed for unlubricated operation permits a longer service life compared to the standard seal
	A6 Scraper variant	Metal scraper: The cylinder has a hard-chrome-plated piston rod and metal scraper, which scrapes off hard particles (e.g. welding spatter) that stick to the piston rod. Application: Use in welding equipment
	F1A Recommended for production plants for manufacturing Li-ion batteries	Cylinders free of copper, zinc and nickel ( $\leq 1\%$ )
	...E Extended piston rod	–
	...L Extended piston rod thread	–

1) The max. energy in combination with the trunnion mounting kit DAMT is 0.1 J.

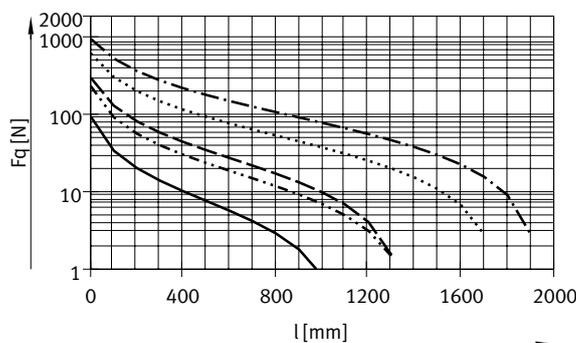

Permissible impact speed: 
$$V = \sqrt{\frac{2 \times E}{m_1 + m_2}}$$

Maximum permissible mass: 
$$m_2 = \frac{2 \times E}{v^2} - m_1$$

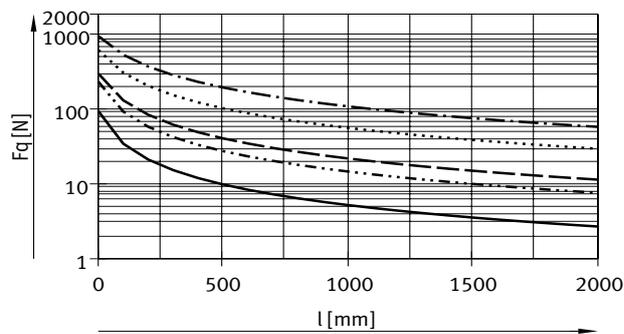

- V Permissible impact speed
- E Max. impact energy
- m1 Moving mass (drive)
- m2 Moving payload

### Max. transverse force F<sub>q</sub> as a function of stroke length l

Horizontal installation

Vertical installation

- ø 32
- · - · - · ø 40
- - - - - ø 50/63
- · · · · ø 80/100
- · - · - · ø 125

#### Note

No transverse forces are permitted in combination with feature DSBC...-L1.

Permissible torsional backlash for variant Q – with protection against rotation							
Piston ø	32	40	50	63	80	100	
Torsional backlash	[°]	±0.65	±0.6	±0.45	±0.45	±0.45	±0.45

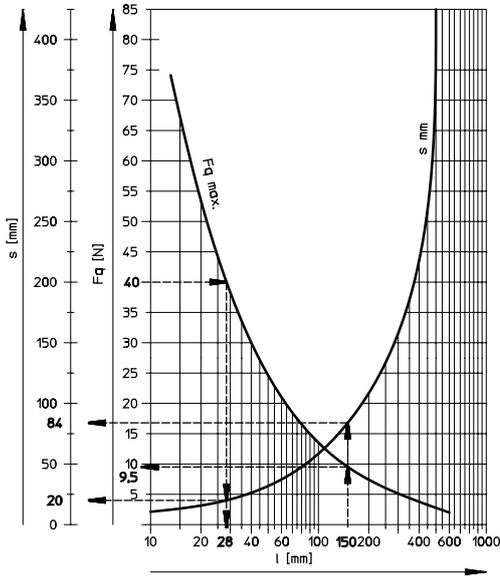

Datasheet

Max. transverse force  $F_q$  as a function of stroke length  $l$  and lever arm  $s$

Q – With protection against rotation

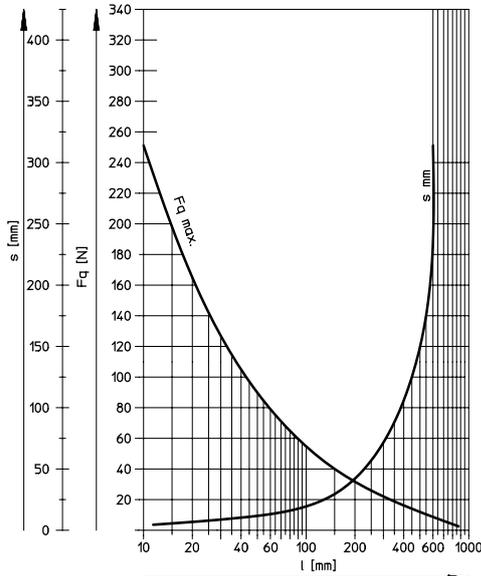

Ø 32

Max. torque = 800 Nmm/max. stroke = 300 mm

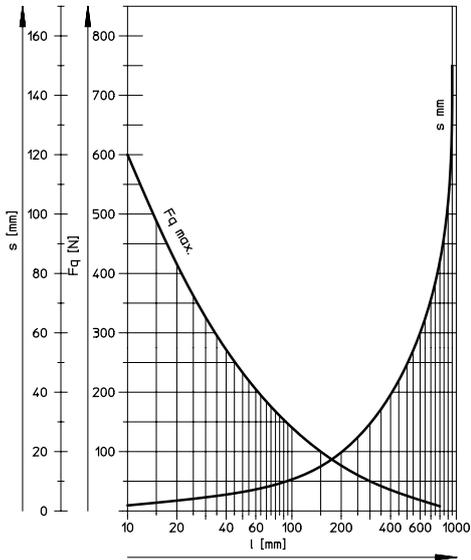

Ø 40

Max. torque = 1100 Nmm/max. stroke = 400 mm

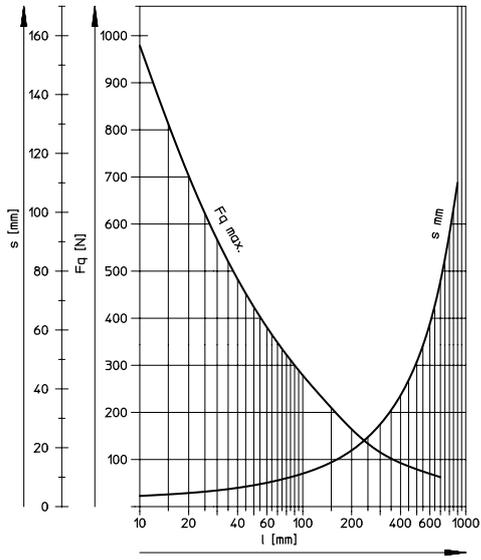

Ø 50/63

Max. torque = 1500 Nmm/max. stroke = 500 mm

Ø 80/100

Max. torque = 3000 Nmm/max. stroke = 600 mm

Examples for piston diameter 32 mm

Example 1:

Stroke length  $l$  = 150 mm  
 Result: permissible  
 Lateral force  $F_q$  = 9.5 N  
 Lever arm  $s$  = 84 mm

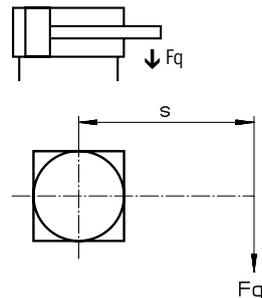

Example 2:

Lateral force  $F_q$  = 40°N  
 Result: permissible  
 Stroke length  $l$  = 28 mm  
 Lever arm  $s$  = 20 mm

Example 3:

Stroke length  $l$  = 150 mm  
 Lever arm  $s$  = 100 mm  

$$F_q = \frac{M}{s} = \frac{800 \text{ Nmm}}{100 \text{ mm}}$$
  
 $M$  = max. torque  
 $s$  = lever arm

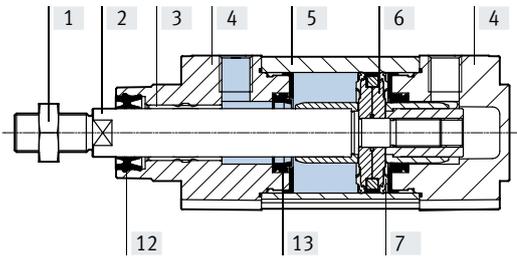

Result: permissible  
 $F_q = 8 \text{ N} < F_{q_{max.}} = 9.5 \text{ N}$

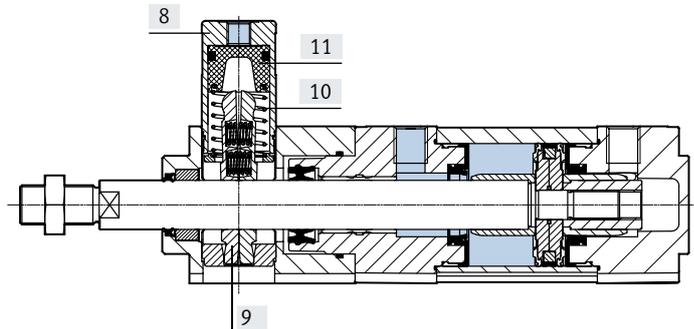

## Datasheet

## Technical data DBSC-...-E1/-E2/-E3 – With end-position locking

- End-position locking should only be used in conjunction with double-acting cylinders with exhaust air flow control in order to ensure that the lock is always completely released prior to starting the drive movement.
- The end-position locking may only be released if the forces at the piston have reached equilibrium. Otherwise, a sudden movement of the piston rod could cause accidents. Blocking off the compressed air supply at both ends (e.g. with a 5/3-way valve) does not provide any safety.
- The piston rod can be locked in any stroke position once the drive is brought mechanically into its end position.
- A very tightly set end-position cushioning (more than 50% closed) can result in the locking bolt not engaging reliably, resulting in premature wear.
- The exhaust bore must not be closed.

Piston $\varnothing$	32	40	50	63	80	100
Operating mode of end-position locking	Positive interlocking with stop cylinder					
	Release through compressed air					
Static holding force [N]	500	500	2000	2000	5000	5000
Max. axial backlash with end position locked [mm]	1.3	1.3	1.3	1.5	1.5	1.5
Min. unlocking pressure	[MPa] $\leq 0.25$		$\leq 0.15$			
	[bar] $\leq 2.5$		$\leq 1.5$			
Max. locking pressure	[MPa] $\geq 0.05$					
	[bar] $\geq 0.5$					

## Sizing example

When sizing pneumatic cylinders it is recommended as a basic principle that only 50% of the indicated theoretical forces (see above) be used.

**Assuming:**

Mounting position = vertical

Workpiece load = 44 kg

$$F = m \times g = 44 \text{ kg} \times 9.81 \text{ m/s}^2 = 431.6 \text{ N}$$

**To be determined:**

Suitable piston diameter

**Example with 32 mm piston diameter:**

Theoretical force at 6 bar, advancing = 483 N

50% of the theoretical force = 241.5 N

Static holding force with 32 mm piston diameter = 500 N

The static holding force of end-position locking is within the permissible range (max. 500 N) for a workpiece load of 44 kg (431.6 N); however, the cylinder would be at 89% capacity.

**Results:**

A cylinder with a piston diameter of 40 mm is therefore recommended for this application.

## Datasheet

## Technical data DSBC...C – with clamping unit

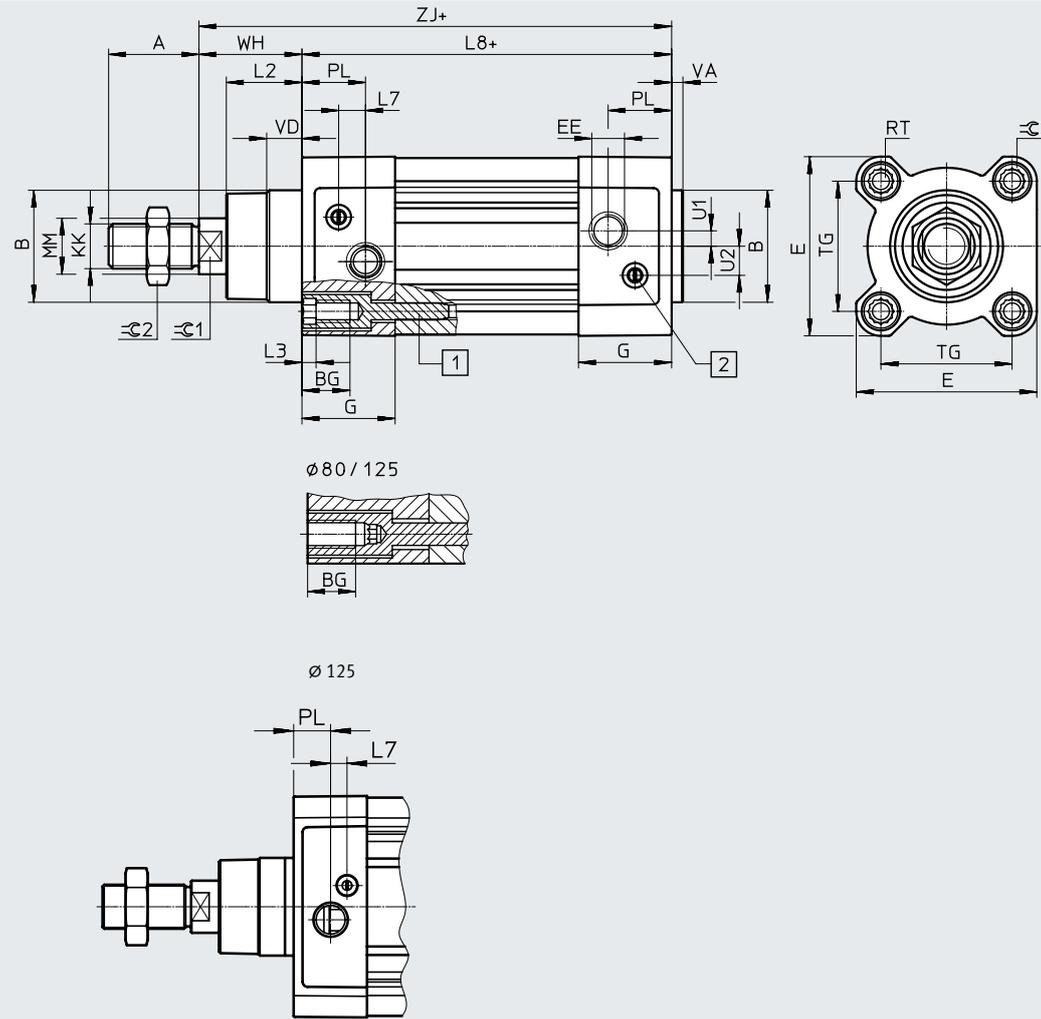

- The specified holding force refers to a static load. If this value is exceeded, the piston rod may slip. Dynamic forces occurring during operation must not exceed the static holding force. The clamping unit is not backlash-free in the clamped condition if varying loads are applied to the piston rod.
- The clamping unit may only be released if the forces at the piston have reached equilibrium. Otherwise, a sudden movement of the piston rod could cause accidents. Blocking off the compressed air supply at both ends (e.g. with a 5/3-way valve) does not provide any safety.

Piston $\varnothing$		32	40	50	63	80	100	125
Mode of operation clamping unit		At both ends						
		Clamping through spring force						
		Release through compressed air						
Static holding force	[N]	600	1000	1400	2000	5000	5000	7500
Max. axial play under load	[mm]	0.5	0.5	0.8	0.8	0.8	0.8	1.8
Min. release pressure	[MPa]	0.3						
	[bar]	3

Q – With protection against rotation

- - **Note**

In combination with variant T, the piston rod is protected against rotation at one end.

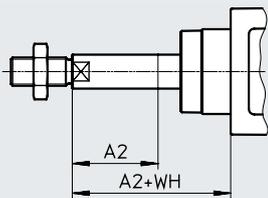

F – Female thread

- - **Note**

In combination with variant T, the piston rod has female threads at both ends.

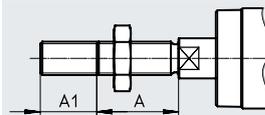

...E – Extended piston rod

- - **Note**

Piston rod extension at one end in combination with variant T.  
In combination with variants T and Q, the piston rod is extended only at the square piston rod

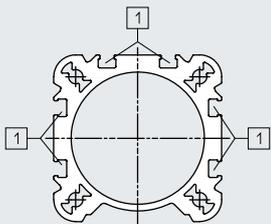

...L – Extended piston rod thread

- - **Note**

In combination with variant T, the piston rod thread is extended at both ends.

D3 – Sensor slot on 3 sides

[1] Sensor slot for proximity switch

## Datasheet

### Ordering data – Versions for DSBC...D3 (sensor slots on 3 sides)

In this version, the piston position can be sensed on 3 sides of the drive.

[1] Sensor slot for proximity switch

[11]	P2	Only up to a stroke of 500 mm
[12]	A1	Not with P
[13]	A1, A2, A3, A6, EX4	Not with P2
[14]	A1, A3, A6	Not with EX4
[15]	A2, A6	Not with R3
[16]	...E, ...L	Only up to a stroke of 2000 mm
[17]	...L	Not with F

 - **Note**

The piston rod extension for the protective bellows is automatically taken into consideration when feature P2 is selected. This means that there is no need to specify a value for feature ...E.

 - **Note**

When feature ...E is selected in combination with feature P2, the part of the piston rod extension ...E is not covered by the protective bellows.

 - **Note**

When feature P2 is selected in combination with feature T (through piston rod), the protective bellows is mounted at one end only.

Accessories

Travel speed v as a function of tubing length l

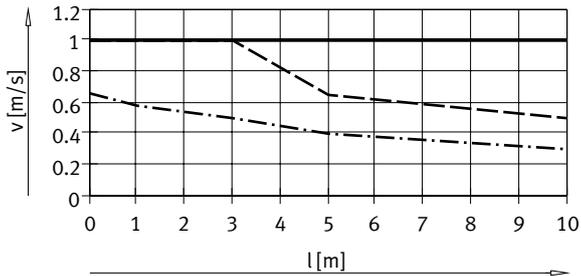

The bellows kit is a leak-free system. To prevent unwanted media from being drawn in, the supply and exhaust air must be ducted via a pressure

compensation hole in the connection part [1]. The pressure generated in the bellows kit by the positioning motion is primarily defined by the travel speed and the

tubing length. The recommended tubing length based on the travel speed of the drive can be read from the graph.

Advancing

- - - - - Ø 40
- ..... Ø 50/63
- ..... Ø 80/100

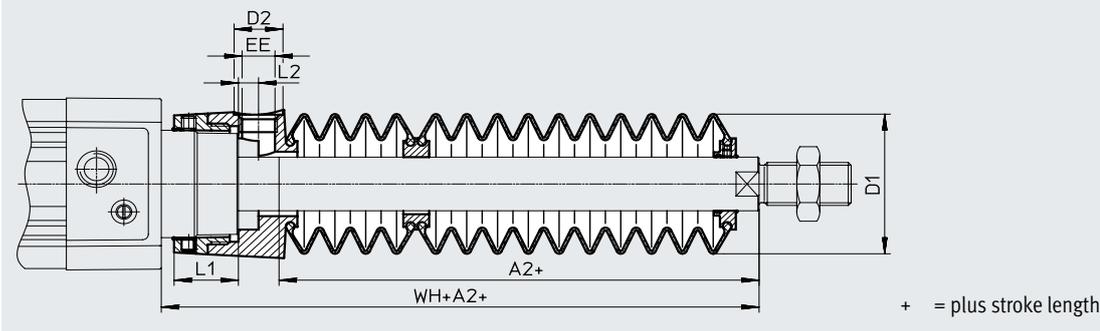

**Note**  
The push-in fittings in the adjacent table must be used for the pressure compensation hole. Silencers can be used as an alternative. This reduces the travel speed slightly.

1) The dimension corresponds to the E value (piston rod extension) of the drive

## Accessories

## Ordering data – Bellows kit

An extended piston rod (order code E) is absolutely essential when using a bellows kit → Ordering data – Modular product system.

The necessary dimension for order code E as a function of piston diameter and cylinder stroke as well as the corresponding bellows kit is indicated in the table below:

## Order example:

Selected standards-based cylinder:

DSBC-32-320-PPV-A-...

The dimension for the corresponding E value (see table):

112 mm

Complete order reference for standards-based cylinder:

DSBC-32-320-PPV-A-...-112E

The corresponding bellows kit:

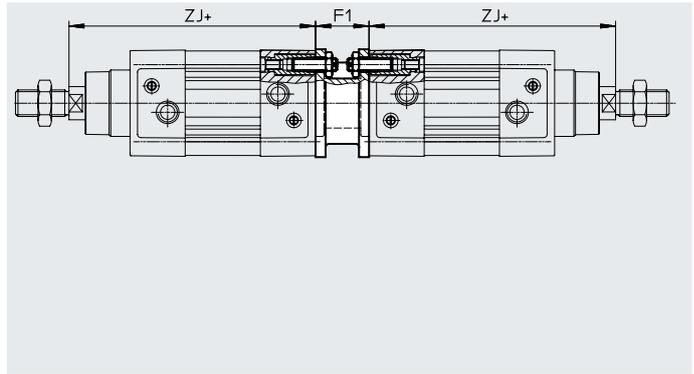

DADB-V6-32-S301-350

125	48	225	349.3	1000	2102	174424	DPNC-125

1) Suitable for ATEX

#### Note

The maximum total stroke length must not be exceeded when combining cylinders and multi-position kits.

### Connecting two cylinders with identical piston diameters to form a 3- or 4-position cylinder

A 3- or 4-position cylinder consists of two separate cylinders whose piston rods extend in opposite directions.

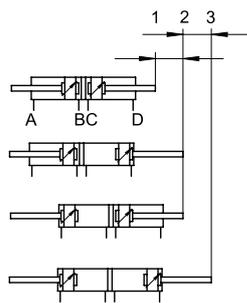

This means that, depending on the actuation and stroke pattern, this type of cylinder can assume up to four positions. In each case the cylinder is moved precisely

against a stop. Note that when one end of the piston rod is fixed, the cylinder barrel

executes the movement. The connections to the cylinder must therefore be flexible.

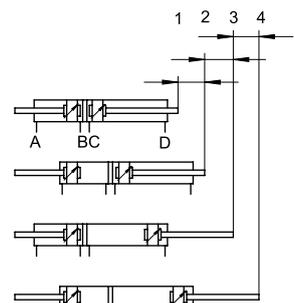

#### To achieve 3 positions

Two cylinders with the same stroke length must be connected to each other.

#### To achieve 4 positions

Two cylinders with different stroke lengths must be connected to each other.

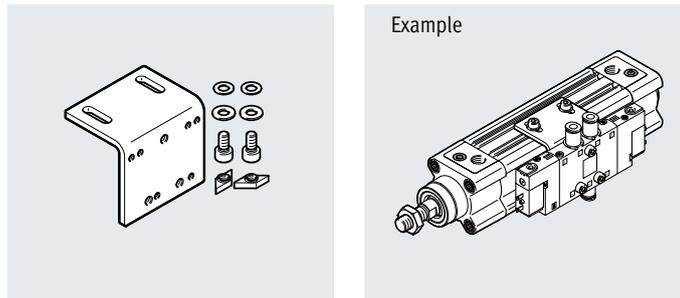

## Accessories

### Mounting kit DAVM

For lateral valve mounting, directly on the drive

Material:  
Mounting bracket, screws: Galvanised steel  
Slot nut: High-alloy stainless steel

The hole pattern on the angle bracket enables solenoid valves to be attached according to the allocation on the right. The following table shows a few solenoid valves that are available.

Allocation table, mounting kit for solenoid valves

## Accessories

## Position transmitter

The position transmitter continuously senses the position of the piston.

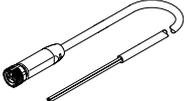

It has an analogue output with an output signal that is proportional to the piston position.

## Ordering data – Position transmitter for T-slot

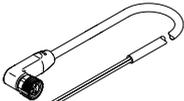

Datasheets → Internet: position transmitter

	For $\varnothing$	Position measuring range	Analogue output		Type of mounting	Electrical connection	Cable length [m]	Part no.	Type
			[V]	[mA]					
	32 ... 125	0 ... 40	0 ... 10	–	Inserted in the slot from above	Plug M8x1, 4-pin, in-line	0.3	<b>553744</b>	<b>SMAT-8M-U-E-0.3-M8D</b>
	32 ... 125	0 ... 50	–	4 ... 20	Inserted in the slot from above	Plug M8x1, 4-pin, in-line	0.3	<b>1531265</b>	<b>SDAT-MHS-M50-1L-SA-E-0.3-M8</b>
		0 ... 80						<b>1531266</b>	<b>SDAT-MHS-M80-1L-SA-E-0.3-M8</b>
		0 ... 100						<b>1531267</b>	<b>SDAT-MHS-M100-1L-SA-E-0.3-M8</b>
		0 ... 125						<b>1531268</b>	<b>SDAT-MHS-M125-1L-SA-E-0.3-M8</b>
		0 ... 160						<b>1531269</b>	<b>SDAT-MHS-M160-1L-SA-E-0.3-M8</b>
		0 ... 50	0 ... 10	–				<b>8115394</b>	<b>SDAT-MHS-M50-1L-SV-E-0.3-M8</b>

## Connecting cables NEBA, straight, connection M8

	Electrical connection 1, connector system	Electrical connection 2, connector system	Electrical connection 2, number of connections/cores	Cable length	Part no.	Type
	M8x1, A-coded, to EN 61076-2-104	Open end	4	2.5 m	★ <b>8078227</b>	<b>NEBA-M8G4-U-2.5-N-LE4</b>
				5 m	<b>8078228</b>	<b>NEBA-M8G4-U-5-N-LE4</b>

## Connecting cables NEBA, angled, connection M8

	Electrical connection 1, connector system	Electrical connection 2, connector system	Electrical connection 2, number of connections/cores	Cable length	Part no.	Type
	M8x1, A-coded, to EN 61076-2-104	Open end	4	2.5 m	★ <b>8078233</b>	<b>NEBA-M8W4-U-2.5-N-LE4</b>
				5 m	<b>8078234</b>	<b>NEBA-M8W4-U-5-N-LE4</b>

## Accessories

Datasheets → Internet: grla

Ordering data – One-way flow control valves			Material	Part no.	Type
Connection	Thread	For tubing O.D.			
<b>For exhaust air</b>
