

Characteristics

At a glance

- Hydraulic shock absorber with path-controlled flow control function
- Rapidly increasing cushioning force curve
- Short cushioning stroke
- Suitable for low-vibration operation
- Not suitable for rotary drives
- Maintenance-free
- Metal end position on the housing
- · Continuous mounting thread with internal hex

Product segmentation

Festo Core Range

Solves the majority of your automation tasks

With the Festo Core Range, we have selected the most important products and functions from our broad product catalogue, and added the quickest delivery. the Core Range offers you the best value with the expected high Festo quality.

- Quickest delivery, worldwide wherever, whenever
- Expected high Festo quality
- Easy and fast to select

Diagrams

The diagrams shown in this document are also available online. These can be used to display precise values.

Geometric characteristics

[Y1] Internal hex

The shock absorber can be adjusted using the hexagon socket

Stop

[F] With fixed stop

Metal end position on the shock absorber housing

Special material properties

[F1A] Recommended for production plants for manufacturing lithium-ion batteries, F1A

Metals with more than 1% copper, zinc or nickel by mass are excluded from use. Exceptions are nickel in steel, chemically nickel-plated surfaces, circuit boards, cables, electrical plug connectors and coils Further information \rightarrow dyss

| Reset time | | | | | | | | | | |
|---|-------|-------|---|---|---|---|----|----|--|--|
| Size | 2 | 3 | 4 | 5 | 7 | 8 | 10 | 12 | | |
| Reset time at room tempera- ture ¹⁾ | 0.5 s | 0.2 s | | | | | | | | |

1) At higher temperatures (+80 $^{\circ}\text{C})$ the max. mass and the cushioning energy must be reduced by approx. 50%.

At low temperatures (-10 °C), the reset time may be up to 1 second. At low temperatures (-10 °C) the reset time for the DYSS-2-4-...-F1A can increase to over 1 second.

If the end position is held for a relatively long period of time, an increased reset time must be expected, which can be 3 seconds or more in unfavourable conditions.

| Forces | | | | | | | | | | | |
|-------------------------------|-------|-------|-------|-----------------------|-------|-------|-------|---------|--|--|--|
| Size | 2 | 3 | 4 | 5 | 7 | 8 | 10 | 12 | | | |
| Min. insertion force 1) | 2.5 N | 3.5 N | 4.5 N | 10 N | | 18 N | 24 N | 35 N | | | |
| Max. stop force ²⁾ | 60 N | 80 N | 100 N | 200 N | 300 N | 500 N | 700 N | 1,000 N | | | |
| Reset force 3) | 0.7 N | 0.5 N | 0.7 N | 0.9 N 1.2 N 2.5 N 4 N | | 4 N | | | | | |

1) This is the minimum force that must be applied so that the shock absorber is pushed precisely into the retracted end position. This value is reduced accordingly with an extended external end position.

2) If the maximum stop force is exceeded, a fixed stop (e.g. YSRA) must be fitted 0.5 mm before the end of the stroke.

3) This is the maximum force that can act on the piston rod so that the shock absorber can still extend fully (e.g. upstream bolt).
