

Electric cylinder unit EPCE-TB

FESTO

Characteristics

At a glance

Further information → [epce](#)

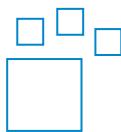

The simplicity of pneumatics is now combined for the first time with the advantages of electric automation thanks to the Simplified Motion Series. These integrated drives are the perfect solution for users who are looking for an electric alternative for very simple motion and positioning tasks between two mechanical end positions, but don't want the commissioning process for traditional electric drive systems that can often be quite complex.

- No external servo drive: all necessary electronic components combined in the integrated drive
- Two control options integrated as standard: digital I/O and IO-Link®
- Complete solution for simple movements between mechanical end positions
- Simplified commissioning: all parameters can be manually set directly on the drive
- No special knowledge required for commissioning
- Minimal zero stroke and extremely compact design make this product the perfect choice for applications where space is at a premium
- Innovative interpretation of toothed belt technology for maximum dynamic response and minimal positioning times
- Ideal for fast movement in sorting, distribution and testing applications

Ordering data - modular system

Further information → [epce](#)

Configurable product

This product and all its product options can be ordered online via the configurator.

Engineering tools

Further information → [engineering tools](#)

Save time with engineering tools Smart Engineering for the optimal solution. Our goal is to increase your productivity. Our engineering tools play an integral part in this. They help you size your system correctly, tap into unimagined productivity reserves and generate additional productivity along the entire value chain. In every phase of your project, from the initial contact to the modernisation of your machine, you will come across a number of different tools which will be of use to you.

Simplified Motion Series - Solution Finder

- Selection tool for simple electric drive solutions from the Simplified Motion Series: This Solution Finder makes finding solutions for electric motion tasks child's play. All you have to do is enter the main application parameters like stroke, payload and motion type, and the system suggests the best solution for your simple motion task in seconds. Then you can simply add it to your shopping basket with just one click and order it online.

Diagrams

Further information → [epce](#)

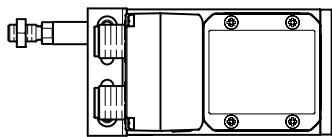

The diagrams shown in this document are also available online. These can be used to display precise values.

Characteristics

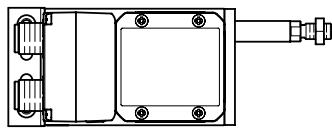

Piston rod, front left

[FL] Piston rod with male thread

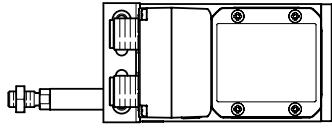

Piston rod, rear left

[BL] Piston rod with male thread

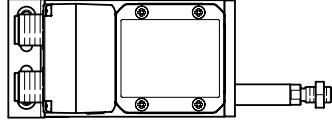

Piston rod, front right

[FR] Piston rod with male thread

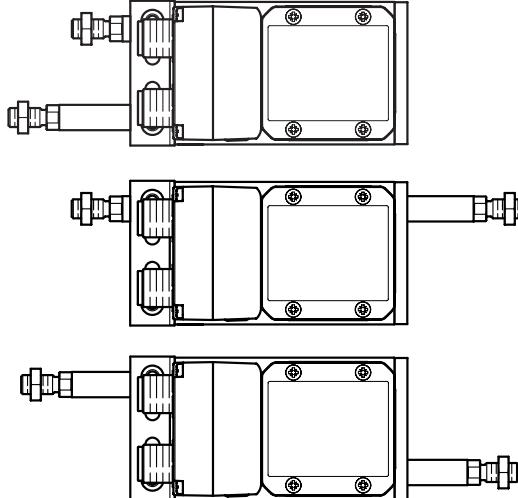

Piston rod, rear right

[BR] Piston rod with male thread

Overview

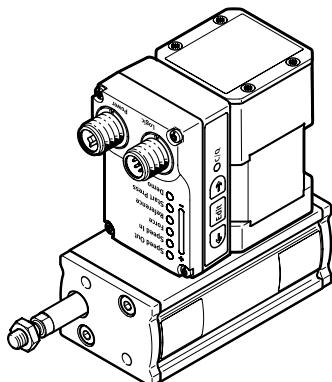

Additional piston rod variants

- Double piston rod
 - Through piston rod
 - Piston rods acting in opposite directions
- Variants with 3 or 4 piston rods available.

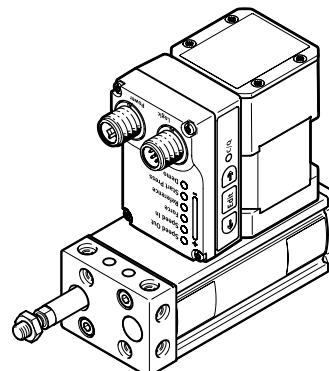

Characteristics

Cover variant

[] Standard

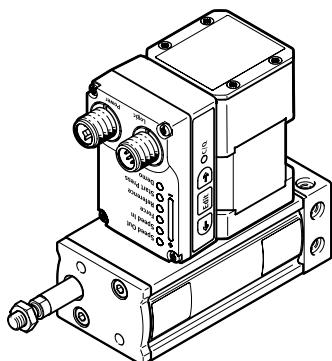

[MF] Multimount, front

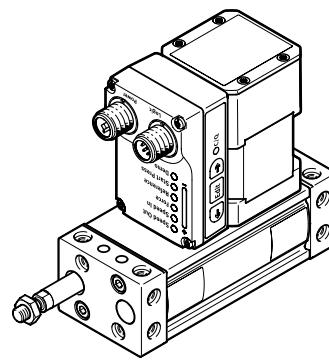

In this variant, additional lateral female threads with centring diameter as well as through-holes are available.

[MB] Multimount, rear

[MD] Multimount, both ends

In this variant, additional lateral female threads with centring diameter as well as through-holes are available.

In this variant, additional lateral female threads with centring diameter as well as through-holes are available.

Motor type

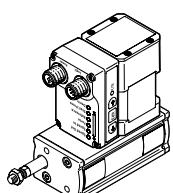

IO-Link

The motor is integrated into the drive and can be easily commissioned according to the “plug and work” principle. The relevant parameters can be set directly on the drive. Control is via digital I/O or IO-Link.

Control panel

When aligning the motor, make sure that the buttons (for parameterisation and control) can be used.

[H1] Integrated

Bus protocol/activation

PNP or NPN switching outputs can be selected for actuation.

End-position sensing

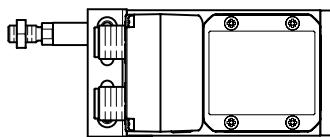

End position feedback similar to a conventional proximity switch, integrated as standard

Characteristics

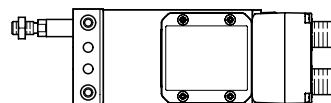

Cable outlet direction

Describes the alignment of the motor on the drive. Depending on the alignment, the connecting cables can be routed according to the customer's specifications. The cables are positioned at a 45° angle to the axis.

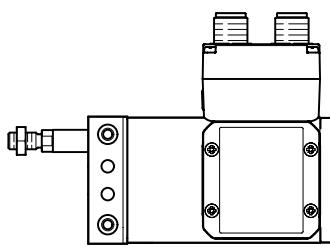

[□] Standard

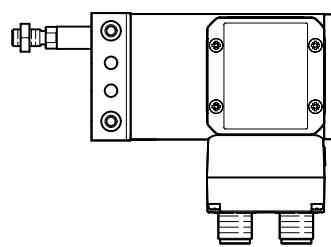

[B] Rear

[L] Left

[R] Right

Electrical accessories

Connecting cable between the motor and IO-Link master

Datasheet

General technical data		
Size	45	60
Design	Electric cylinder, With toothed belt, With integrated drive	
Protection against torque/ guide	With plain-bearing guide	
Piston-rod end	Male thread	
Piston rod thread	M6	M10x1.25
Stroke	10 mm; 20 mm; 30 mm; 50 mm	10 mm; 20 mm; 30 mm; 50 mm; 80 mm
Stroke reserve	0 mm	
Additional functions	User interface Built-in end-position sensing	
Display	LED	
Referencing	Positive fixed stop block Negative fixed stop block	
Type of mounting ¹⁾	With through-hole Via female thread Via centring sleeve With accessories	
Mounting position	optional	
Reference value operational performance	50 ... 500 km	50 ... 800 km
Max. cable length	15 m outputs 15 m inputs 20 m with IO-Link® operation	

1) Through-hole and centring sleeve only with multimount cover.

Mechanical data		
Size	45	60
Reference value effective load, horizontal	5 kg	10 kg
Reference value effective load, vertical	2.5 kg	5 kg
Max. feed force Fx	85 N	150 N
Max. speed ¹⁾	0.44 m/s	0.6 m/s
Speed "Speed press"	0.02 m/s	
Max. acceleration ²⁾	9 m/s ²	
Repetition accuracy	±0.05 mm	
Impact energy in end positions	0.003 J	0.016 J
Position detection	Motor encoder	

1) Adjustable in steps of 10%.

2) Parameter cannot be changed.

Toothed belt		
Size	45	60
Toothed-belt pitch	2	
Toothed-belt stretch	0.31%	0.375%
Effective diameter of drive pin- ion	10.18 mm	
Feed constant	32 mm/U	

Datasheet

Electrical data

Size	45	60
Nominal voltage DC	24 V	
Permissible voltage fluctuations	+/- 15%	
Nominal current	3 A	5.3 A
Max. current consumption	3 A	5.3 A
Max. current consumption, logic	300 mA	
Rotor position sensor	Absolute single-turn encoder	
Rotor position sensor, encoder measuring principle	Magnetic	
Rotor position transducer resolution	16 bit	

Interfaces

Size	45	60
Parameterisation interface	IO-Link, User interface	
Working range of logic input	24 V	
Number of digital logic inputs	2	
Features of logic input	Configurable Not galvanically isolated	
Switching logic for inputs	NPN (negative switching) PNP (positive switching)	
Specification logic input	Based on IEC 61131-2, type 1	
Max. current digital logic outputs	100 mA	
Number of digital logic outputs 24 V DC	2	
Features of digital logic outputs	Configurable Not galvanically isolated	
Switching logic for outputs	NPN (negative switching) PNP (positive switching)	

Technical data IO-Link®

Size	45	60
IO-Link, SIO-Mode support	Yes	
IO-Link, communication mode	COM3 (230.4 kBaud)	
IO-Link, connection technology	Plug	
IO-Link, Port class	A	
IO-Link, Number of ports	1	
IO-Link, Process data length OUT	2 bytes	
IO-Link, Process data content OUT	Move in 1 bit Move out 1 bit Quit Error 1 bit Move intermediate 1 bit	Move in 1 bit Quit Error 1 bit Move out 1 bit Move intermediate 1 bit
IO-Link, Process data length IN	2 bytes	
IO-Link, Process data content IN	State In 1 bit State Out 1 bit State Move 1 bit State Device 1 bit State Intermediate 1 bit	State In 1 bit State Move 1 bit State Device 1 bit State Intermediate 1 bit State Out 1 bit
IO-Link, Service data IN	Speed 32 bit Position 32 bit Force 32 bit	
IO-Link, Min. cycle time	1 ms	
IO-Link, Data storage required	0.5 kB	
IO-Link, Protocol version	Device V 1.1	

Datasheet

Operating and environmental conditions		
Size	45	60
Ambient temperature	0 ... 50°C	
Storage temperature	-20 ... 60°C	
Note on ambient temperature	Power must be reduced by 2% per K at ambient temperatures above 30°C.	
Temperature monitoring	Switch-off for excessive temperature Integrated precise CMOS temperature sensor with analogue output	
Relative air humidity	0 - 90%	
Insulation protection class	B	
Protection class	III	
Degree of protection	IP40	
Duty cycle	100%	
CE mark (see declaration of conformity) ¹⁾	To EU EMC Directive In accordance with EU RoHS Directive	
CE marking (see declaration of conformity) ²⁾	To UK RoHS instructions To UK instructions for EMC	
KC mark	KC-EMV	
Approval	RCM trademark	
Vibration resistance	Transport application test with severity level 1 to FN 942017-4 and EN 60068-2-6	
Shock resistance	Shock test with severity level 1 to FN 942017-5 and EN 60068-2-27	
Maintenance interval	Life-time lubrication

2) More information www.festo.com/catalogue/epce → Support/Downloads.

Weight		
Size	45	60
Basic weight for 0 mm stroke ¹⁾	775 g; 813 g	1,350 g; 1,407 g
Additional weight per 10 mm stroke	29 g	46 g
Moving mass for 0 mm stroke ²⁾	83 g; 87 g	188 g; 197 g
Additional moving mass per 10 mm stroke	4.55 g	9.75 g

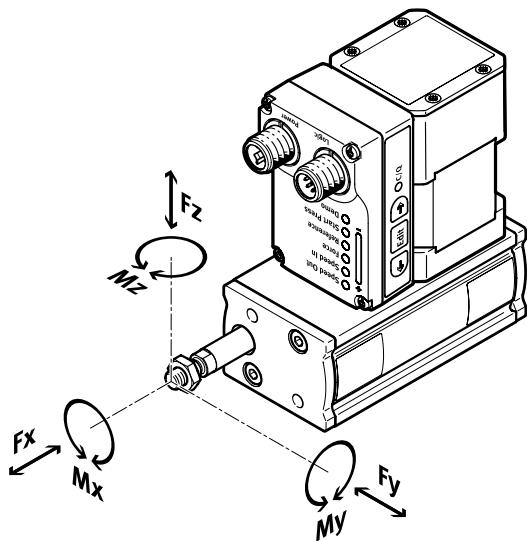

1) EPCE-.../EPCE-...-MF (with cover variant)

2) EPCE-.../EPCE-...-MF (with cover variant)

Materials		
Size	45	60
Material housing	Anodised wrought aluminium alloy	
Material piston rod	High-alloy stainless steel	
Material toothed belt	Polychloroprene with glass fibre	
LABS (PWIS) conformity	VDMA24364 zone III	
Note on materials	RoHS-compliant	

Datasheet

Max. permissible loads on the piston rod

Size	45	60
Max. feed force Fx	85 N	150 N
Max. moment Mx	0 Nm	
Max. moment My	0.4 Nm	1 Nm
Max. moment Mz	0.4 Nm	1 Nm

Calculation of the load comparison factor

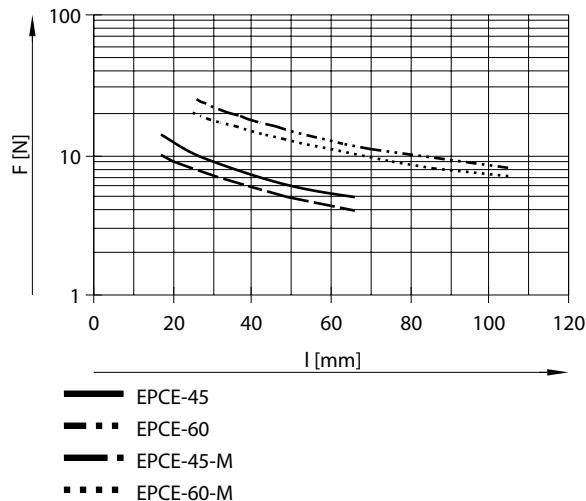

$$f_v = \frac{|F_{y1}|}{F_{y2}} + \frac{|F_{z1}|}{F_{z2}} + \frac{|M_{x1}|}{M_{x2}} + \frac{|M_{y1}|}{M_{y2}} + \frac{|M_{z1}|}{M_{z2}} \leq 1$$

If the piston rod is subjected to two or more of the indicated forces and torques simultaneously, the following equation must be satisfied in addition to the indicated maximum loads.

F1 / M1 = dynamic value

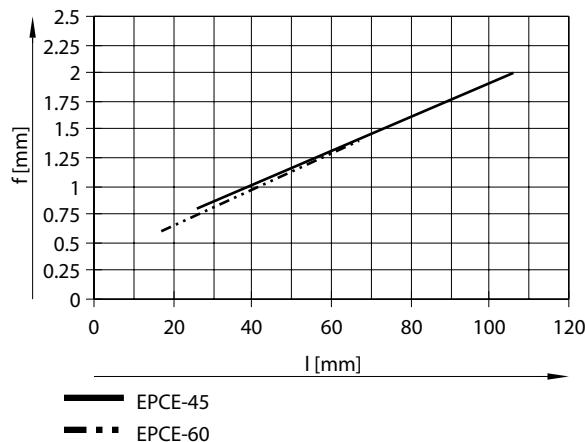

F2 / M2 = maximum value

Max. permissible transverse forces F on the piston rod as a function of projection l

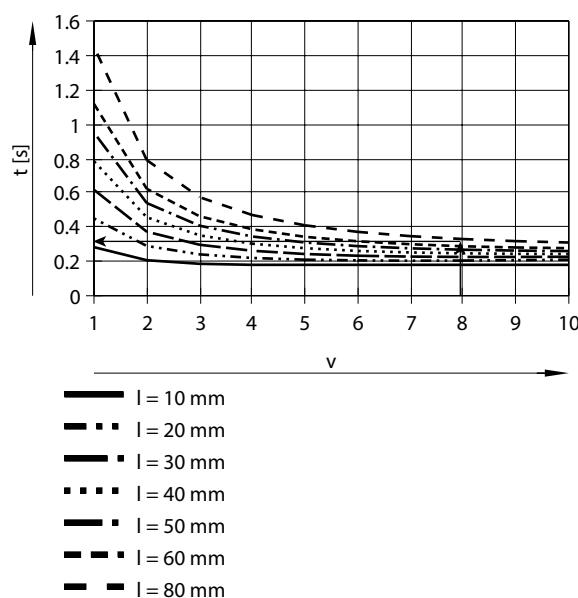

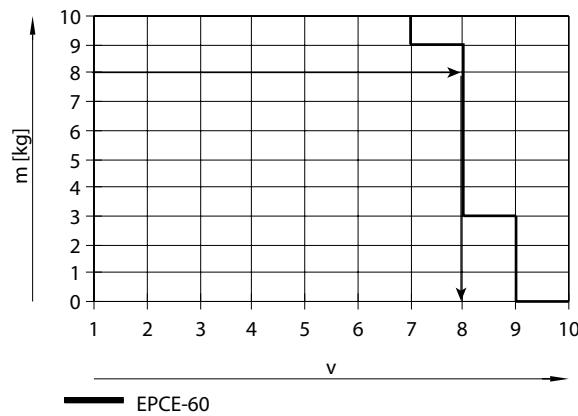

Datasheet

Piston rod deflection f as a function of projection A

Sizing example

Application data:

- Payload: 8 kg
- Mounting position: horizontal
- Stroke: 60 mm
- Max. permissible positioning time: 0.5 s (one direction)

Step 1:

Smallest possible size from the table “Mechanical data”: EPCE-TB-60

Step 2:

Selecting the max. speed level v for payload m (see diagram on the left)

Step 3:

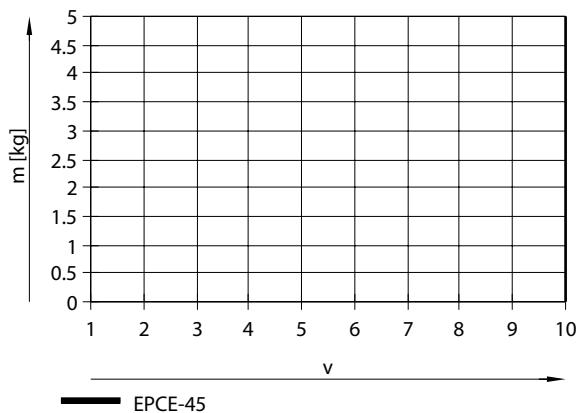

Reading off the min. positioning time t for stroke l (see diagram on the left)

Result: the application can be realised using EPCE-TB-60-60. A minimum positioning time (one direction) of 0.3 s is achieved.

Longer positioning times can be selected at any time using a lower speed level.

Datasheet

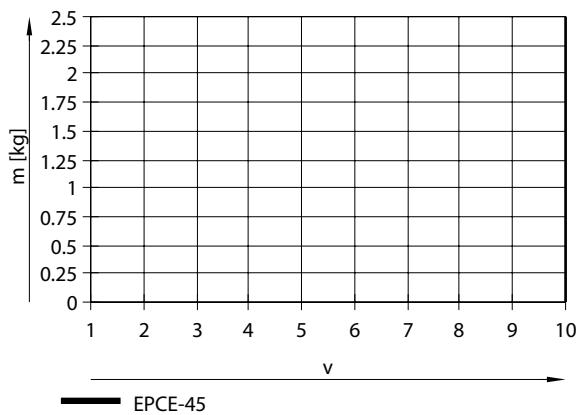

Mass m as a function of speed level v, horizontal mounting position for EPCE-45

Note:

The lines represent the maximum values. The lower speed levels can be set at any time.

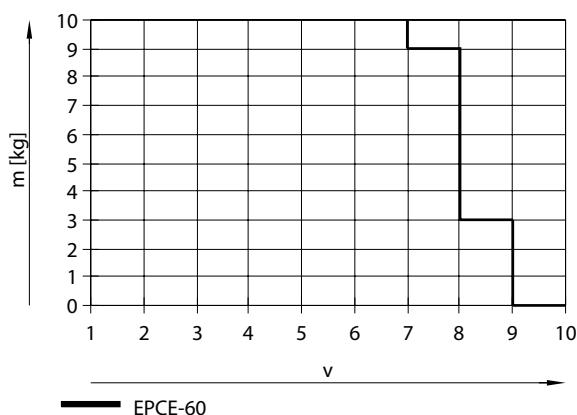

Mass m as a function of speed level v, vertical mounting position for EPCE-45

Note:

The lines represent the maximum values. The lower speed levels can be set at any time.

Mass m as a function of speed level v, horizontal mounting position for EPCE-60

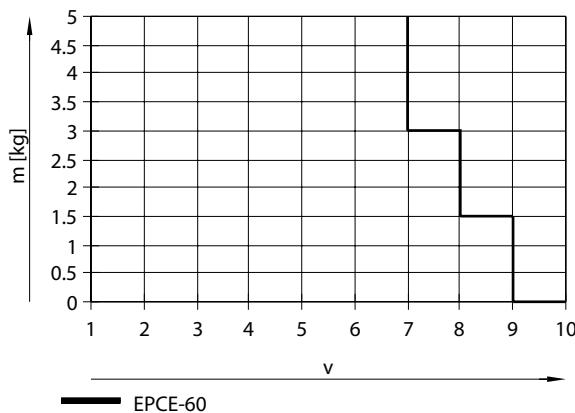

Note:

The lines represent the maximum values. The lower speed levels can be set at any time.

Datasheet

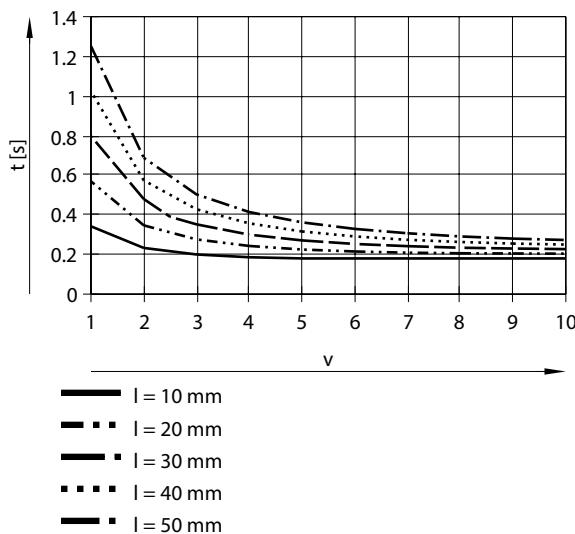

Mass m as a function of speed level v, vertical mounting position for EPCE-60

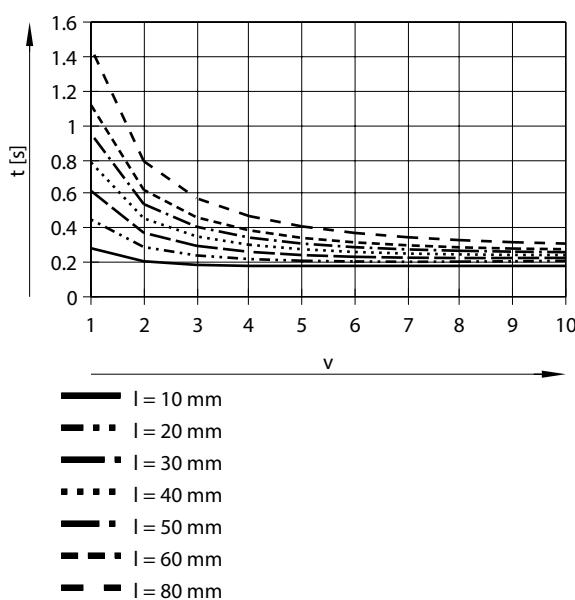

Note:

The lines represent the maximum values. The lower speed levels can be set at any time.

Positioning time t as a function of speed level v and stroke l EPCE-45

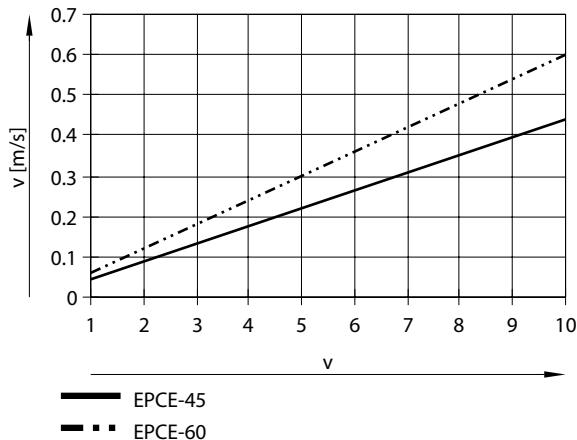

Positioning time t as a function of speed level v and stroke l EPCE-60

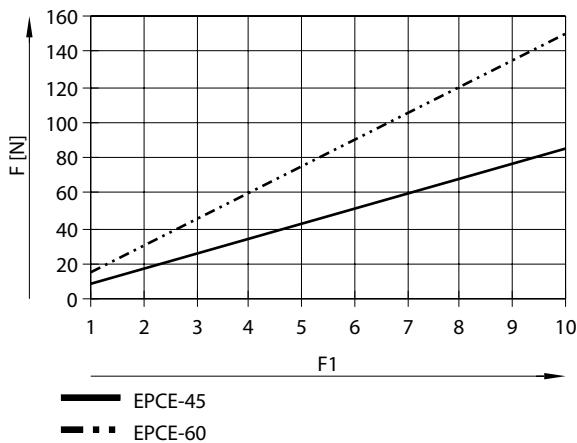

Datasheet

Speed v as a function of speed level v

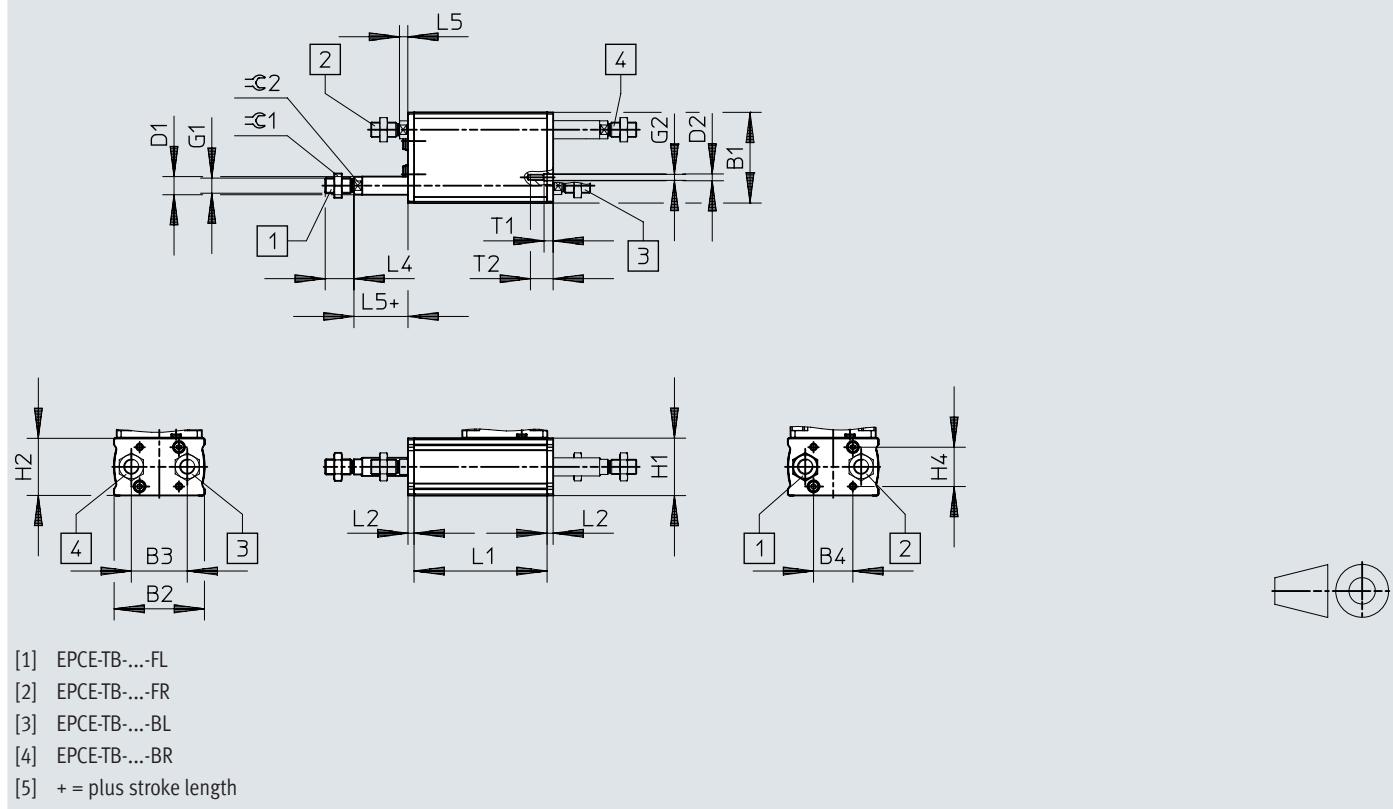

Feed force F as a function of force level F1
