## Datasheet

### Static load values at the gripper jaws

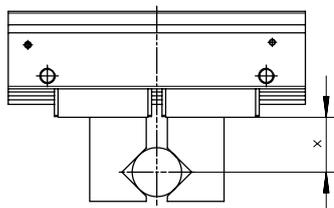

The indicated permissible forces and torques refer to one gripper jaw. The indicated values include the lever arm, additional applied loads due to the workpiece or external gripper fingers and acceleration forces occurring during movement. The zero coordinate line (gripper jaw guide) must be taken into account when calculating the torques.

Note: A collision of the slides must be avoided. In the event of a collision, the slides can get damaged.

### Gripping force $F_{Gr}$ per gripper jaw as a function of the operating pressure and lever arm $x$

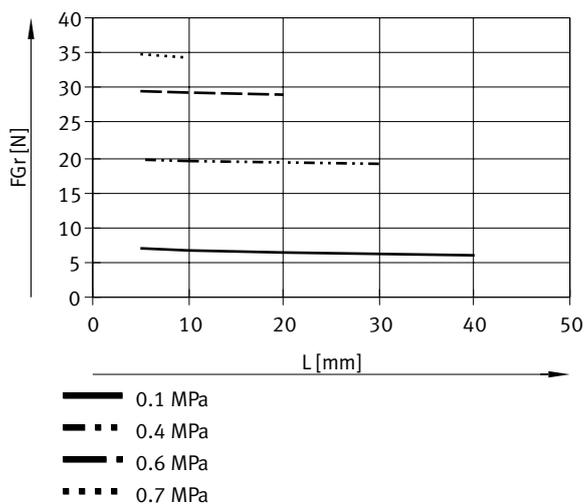

The gripping forces as a function of operating pressure and lever arm can be determined from the following graphs.

The gripping torque is not constant across the opening angle.

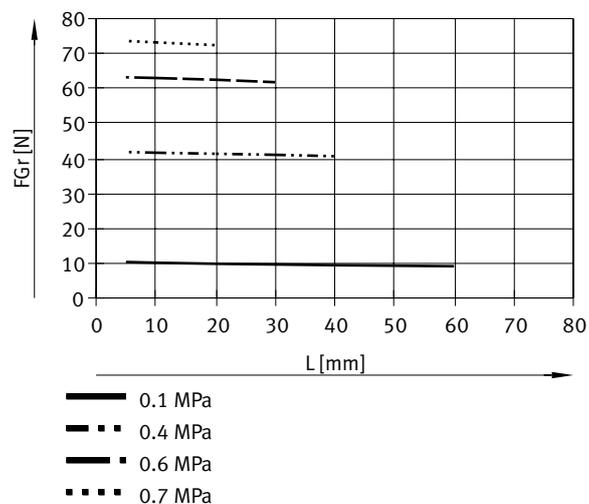

Sizing software for gripper selection → <https://www.festo.com/x/topic/eng>

### Gripping force $F_{Gr}$ per gripper jaw as a function of operating pressure and lever arm $x$ – external gripping (closing), double-acting – HPPF-8

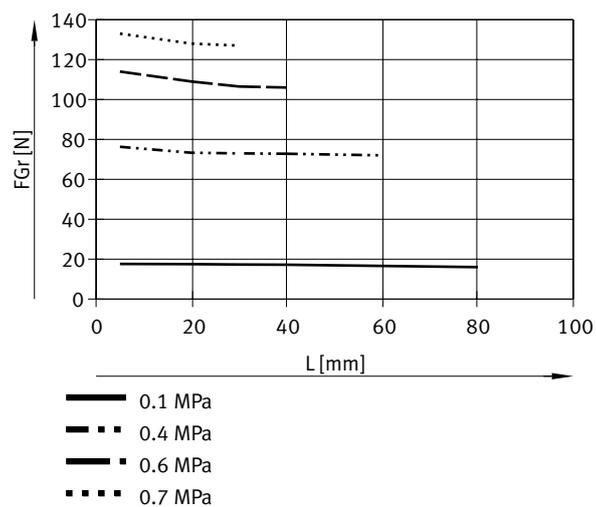

## Datasheet

### Gripping force $F_{Gr}$ per gripper jaw as a function of operating pressure and lever arm $x$ – external gripping (closing), double-acting – HPPF-12

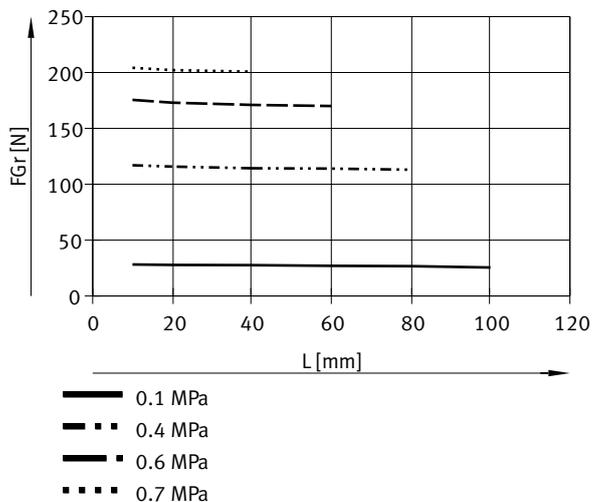

### Gripping force $F_{Gr}$ per gripper jaw as a function of operating pressure and lever arm $x$ – external gripping (closing), double-acting – HPPF-16

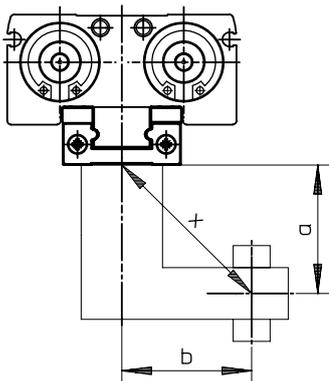

## Datasheet

### Gripping force $F_{Gr}$ per gripper jaw as a function of operating pressure and lever arm $x$ – external gripping (closing), double-acting – HPPF-20

### Gripping force $F_{Gr}$ per gripper jaw at 0.6 MPa (6 bar, 87 psi) as a function of lever arm $x$ and eccentricity $a$ and $b$

### Gripping force $F_{Gr}$ per gripper jaw at 0.6 MPa (6 bar, 87 psi) as a function of lever arm $x$ and eccentricity $a$ and $b$

$$x = \sqrt{a^2 + b^2} = \sqrt{20^2 + 25^2} = 32 \text{ mm}$$

The formula (on the left) must be used to calculate the lever arm  $x$  with eccentric gripping.

The gripping force  $F_{Gr}$  can then be read from the graphs using the calculated value  $x$ .

Calculation example:

Where:

Distance  $a = 20 \text{ mm}$

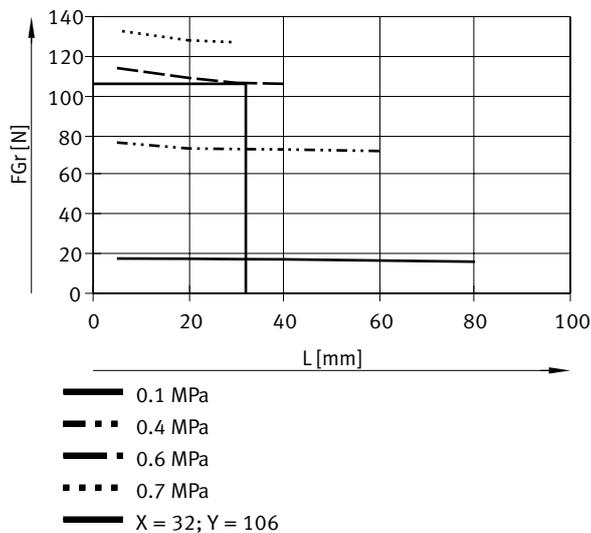

Distance  $b = 25 \text{ mm}$

To be determined:

The gripping force at 0.6 MPa (6 bar, 87 psi), with an HPPF-16, used as an external gripper.

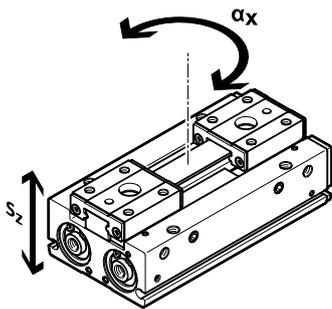

## Datasheet

### Gripping force $F_{Gr}$ per gripper jaw at 0.6 MPa (6 bar, 87 psi) as a function of lever arm $x$ and eccentricity $a$ and $b$

The graph gives a value of  $F_{Gr} = 106$  N for the gripping force.

### Gripper jaw backlash

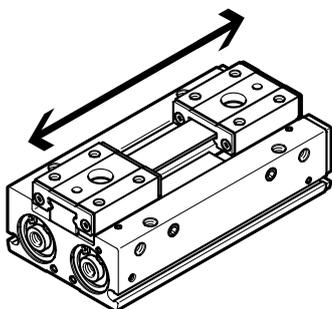

The gripper has a ball guide, which eliminates any possible backlash between the gripper jaws and the housing. The backlash values listed in the table have been calculated based on the traditional accumulative tolerance method.

Size <sup>1)</sup>	8	12	16	20
Max. gripper jaw backlash $S_z$	0 mm			
Max. angular gripper jaw backlash $\alpha_x, \alpha_y$	0 deg			

<sup>1)</sup> The values only apply when the gripper is open.

### Opening and closing times – HPPF-8 ... 12

The specified opening and closing times [ms] were measured at room temperature and with the gripper installed horizontally without additional gripper fingers. The grippers must be throttled for higher masses [g]. Opening and closing times must then be adjusted accordingly.
