

Holding brakes DACS

FESTO

Key features

At a glance

Holding brakes are generally used to dynamically brake a movement or to prevent round rods of different lengths from starting up at any position. Attaching a holding brake to a pneumatic cylinder allows the piston to be braked or clamped. During clamping, the round rod or piston rod is securely locked so that the application of external force does not produce any relative motion. A rod can be locked at any position along the stroke, whether in the end positions or the intermediate positions. This provides protection in the event of a pressure failure and secures the round rod or piston rod during intermediate stops for process operations.

- The clamping force is released when compressed air is supplied to the holding brake
- Static holding force up to 17000 N

 Note

The holding brakes DACS-...-S are a safety device as defined in the Machinery Directive 2006/42/EC and have been tested and certified to relevant standards. Additional information is available at www.festo.com/sp → Certificates.
The holding brakes DACS-...-S are suitable for use in ATEX zones in "static holding" mode.

Possible safety functions:

- Holding function: retaining a round rod by clamping with frictional locking
- Emergency braking function: stopping the movement of a round rod by clamping with frictional locking

The safety functions are triggered by switching off the compressed air supply or by the failure of the compressed air supply.

Position sensing

[A] Via proximity switch

- For monitoring the switching status

Certification

[S] Safety device

- To Machinery Directive 2006/42/EC

Corrosion protection

[R3] High corrosion protection

- Protects the holding brake against corrosion

Peripherals overview

Accessories			
	Type/order code	Description	→ Page/Internet
[1]	Foot mounting HNG/HNC/CRHNC	For bearing cap	9
[2]	Flange mounting FNG/FNC/CRFNG	• For bearing cap • Suitable for emergency stop applications/dynamic braking	10/11
[3]	Push-in fitting QS	For connecting tubing with standard outside diameters	qs
[4]	Sensor kit DADG	Inductive sensor kit for status sensing of the clamping function	12

 **Note**

Only flange mounting FNG/FNC/CRFNG is permissible for emergency stop applications/dynamic braking.
Additional accessories for this application are available on request.

Data sheet

Function

-  - Diameter of the round rod to be clamped
16 ... 40 mm
-  - Force
1350 ... 17000 N

General technical data				
For round rod diameter	16	20	25	40
Release connection	G1/8		G3/8	
Position sensing	Via proximity switch			
Type of mounting	Via female thread			
	With accessories			
Type of clamping with active direction	At both ends			
	Clamping via spring force, released via compressed air			
Mounting position	Any			

Operating and environmental conditions					
For round rod diameter		16	20	25	40
Operating pressure	[bar]	3.8 ... 8			
Min. release pressure	[bar]	3.8			
Max. permissible test pressure	[bar]	8			
Operating medium		Compressed air to ISO 8573-1:2010 [7:4:4]			
Requirements on the round rod					
Tolerance		h7 ... f7			
Quality		At least HRC 60 or hard chromium-plated (minimum thickness 20 µm)			
		Surface roughness max. 4 µm			
Lead-in chamfer		3 mm wide 15° chamfer on the end of the round rod			
Ambient temperature ¹⁾	[°C]	−20 ... +80		−10 ... +80	−20 ... +80
Corrosion resistance class CRC ²⁾					
[] Standard		1			
[R3] High corrosion protection		3			

1) Note operating range of proximity switches.

2) Corrosion resistance class CRC 1 to Festo standard FN 940070

Low corrosion stress. Dry internal application or transport and storage protection. Also applies to parts behind covers, in the non-visible interior area, and parts which are covered in the application (e.g. drive trunnions).

Corrosion resistance class CRC 3 to Festo standard FN 940070

High corrosion stress. Outdoor exposure under moderate corrosive conditions. External visible parts with primarily functional surface requirements which are in direct contact with a normal industrial environment.

Safety data				
For round rod diameter	16	20	25	40
Safety function	Holding and stopping a movement			
Performance Level (PL)	Stopping, holding, blocking a movement/category 1, Performance Level c			
Certification	German Technical Control Board (TÜV)			
Certificate issuing authority	TÜV CA 697			
CE marking (see declaration of conformity) ¹⁾	To EU Machinery Directive			
UKCA marking (see declaration of conformity) ¹⁾	To UK instructions for machines

Data sheet

Weights [g]				
For round rod diameter	16	20	25	40
Product weight [g]	1483	3143	12832	34500

Forces [N]				
For round rod diameter	16	20	25	40
Static holding force	1350	3300	8200	17000

Note

The specified holding force refers to a static load. If this value is exceeded, slippage may occur. Dynamic forces occurring during operation must

not exceed the static holding force if slippage is to be avoided. The holding brake is backlash-free in the clamped condition when varying loads are applied to the round rod.

Lateral loads and bending moments on the round rod can impair the function. (Make sure that the load on the round rod is only in the direction of movement.)

Actuation:

The holding brake may only be released when the forces on the round rod are in equilibrium. Otherwise there is a risk of accidents due to the sudden movement of the round rod. Blocking off the compressed air supply at both ends (e.g. with a 5/3-way valve) does not provide any safety.

Materials

Holding brakes	
Spring	High-alloy steel
Housing	
DACS-...	Steel
DACS-...-R3	High-alloy steel
Clamping jaws	Tool steel
Piston	Steel
Seals	NBR
	TPE-U(PU)
PWIS conformity	VDMA24364-B2-L
Note on materials	RoHS-compliant

Accessories

Foot mounting
HNG/HNC/CRHNC

Material:
HNG/HNC: galvanised steel
CRHNC: high-alloy steel
Free of copper and PTFE

 Note

The foot mounting can also be fitted on the side of the end cap. Separate screws are required for this.

Dimensions and ordering data

For diameter	AB ø	AH	AO	AT	AU	E	TR
[mm]							
16	10	36	9	4	28	54	36
