- Not suitable

Method of measurement

Flow-relevant bending radius Rd

The tube is bent in the direction of its own curve until the tubing outer diameter is flattened by 5%. Rd is then calculated mathematically. The flow rate is not reduced until Rd is reached.

Cross section flattened by bending the tube.
d = non-deformed tubing O.D.
d1 = deformed tubing O.D.

Technical data

Plastic tubing PU

Highly flexible fibre-reinforced plastic tubing distinguished by its great resistance to abrasion and to kinks.
