

Bellows gripper DHEB

FESTO

Characteristics

At a glance

[Link](#) [dheb](#)

An internal piston moves when the compressed air connection is pressurised. A mechanism transfers the movement of the piston to the bellows. This causes the bellows to deform outwards. The increase in the bellows diameter enables it to grasp payloads using their inner contour. When the gripper is exhausted, the return force of the bellows pushes the piston back to its initial position.

General information:

- Single-acting internal gripper
- Optionally with internal through-hole
- Max. payload: 5.1 kg
- Working range: diameter 8 ... 85 mm

There is a choice of two actuating directions for the bellows:

- Downwards
- Upwards

Choice of two bellows materials:

- Ethylene propylene rubber (EPDM)
- Silicone

Two compressed air connection positions can be selected:

- In direction of travel (overhead)
- Perpendicular to the direction of movement (lateral)

These grippers are not designed for the following or similar application examples:

- Machining
- Aggressive media
- Grinding dust
- Welding spatter

Characteristics

Bellows material

[E] EPDM

- Higher friction coefficient than silicone material
- Minimal marking on high-gloss parts

[S] Silicone

- Very good temperature resistance (wider range)
- Food-safe
- Longer service life than EPDM material

Connection position

[L] In the direction of motion

[P] Perpendicular to direction of movement

Application example

- Gentle internal gripping of fragile workpieces (e.g. glass or ceramics)
- Transporting and packaging of glasses, cups and bottles, for example
- The internal through-hole [1] (optional) enables the workpiece to be cooled, cleaned, checked for leaks or disinfected during the handling process

Only use the gripper for cylindrically shaped workpieces.

Opening and closing times

The indicated opening and closing times [ms] were measured at room temperature, an operating pressure of 0.6 MPa (6 bar, 87 psi) and with the gripper installed vertically. The times refer to the unloaded gripper. Depending on the design variant, the expansion of the bellows is declared as the opening time and the reset as the closing time.

Minimum distance L to be maintained between the grippers

When using the proximity switches, ferrite parts (e.g. retaining screws) can cause interference. The minimum distance L between the grippers must therefore be maintained:

- DHEB-27/33: 20 mm
- DHEB-41: 30 mm
- DHEB-51/63: 15 mm
