

Standards-based cylinder DSBF-C, to ISO 15552, clean design

FESTO

Key features

At a glance

- Standards-based cylinders to ISO15552 (corresponds to the withdrawn standards ISO 6431, DIN ISO 6431, VDMA24562, NFE49003.1 and UNI 10290)
- The standards-based cylinder is used wherever hygiene, ease of cleaning and resistance are important, predominantly in dry and splash zones in the food and packaging industry.
- For hygiene reasons, the threads on the cylinder caps should be sealed with suitable plug screws (available as accessories → page 33)
- Resistant to conventional cleaning agents
- Increased corrosion protection
- Three types of cushioning available:
 - P cushioning: elastic cushioning rings/plates at both ends
 - PPS cushioning: pneumatic cushioning, self-adjusting at both ends
 - PPV cushioning: pneumatic cushioning, adjustable at both ends
- The variants can be configured according to individual needs using a modular product system
- Excellent flexibility thanks to a wide range of variants
- Comprehensive range of mounting accessories for just about every type of installation
- Contactless position sensing via proximity switches

The technology in detail

- [1] Hygienic and self-adjusting PPS cushioning
- [2] Easy-to-clean cylinder profile without corners and recesses
- [3] Corrosion-resistant cylinder surface
- [4] Standard dimensions and mounting accessories to ISO 15552
- [5] NSF-H1 lubricant and special wiper (characteristic A3) suitable for contact in the food area. Long service life even with insufficient lubrication due to frequent cleaning processes

Longer service life with bellows kit DADB

The bellows protects the piston rod, the seal and the bearing from the effects of a wide range of media, which has a positive impact on the service life of these components.

The bellows kit is a leak-free system. To prevent unwanted media from being drawn in, the supply and exhaust air for the kit must be ducted via a pressure compensation hole in the connection part [1].

The kit protects the piston rod, seal and bearing against a wide variety of media, for example:

- Dust
- Chippings
- Oil
- Grease
- Petrol

Key features

Variants from the modular product system		
Symbol	Key features	Description
	L Low friction	• Break-away pressure: high • Dynamic response: very fast • Resistance: minimal resistance during movement, maximum stick-slip Application example: belt tensioner • Suitable for applications that require dynamic movement • Efficient at speeds above 50 mm/s
	U Constant, slow movement	• Break-away pressure: low • Dynamic response: slow and constant • Resistance: strong resistance during movement, minimal stick-slip Application example: slow feed motion • Suitable for slow movements at a constant speed over the stroke range
	T Through piston rod	For working at both ends with the same force in the forward and return stroke, for attaching external stops
	F Female thread on the piston rod	–
	T1 Heat-resistant seals	Temperature range 0 ... +120°C
	T3 Low temperature	Temperature range –40 ... +80 °C
	T4 Heat-resistant seals	Temperature range 0 ... +150°C
	A1 Wiper variant	Increased chemical resistance: for longer service life, e.g. when using cooling lubricants.
	A2 Wiper variant	Hard wiper: The cylinder has a hard-chrome-plated piston rod and a hard wiper, which protects against dry, dusty media
	A3 Wiper variant	Unlubricated operation: Cleaning processes degrease the piston rod. A special piston rod seal designed for unlubricated operation permits a longer service life compared to the standard seal
	...E Extended piston rod	–
	...L Extended piston rod thread	–

1) Corrosion resistance class CRC 4 to Festo standard FN 940070

Particularly high corrosion stress. Outdoor exposure under extreme corrosive conditions. Parts exposed to aggressive media, e.g. in the chemical or food industries. Such applications may need to be safeguarded by special testing (→ also FN 940082) using appropriate media.

2) Suitable for ATEX

Flange mounting CRFNG

Material:
High-alloy steel
Free of copper and PTFE

Cannot be used on the bearing cap in combination with protective bellows kit DADB.

Accessories

Travel speed *v* as a function of tubing length *l*

The bellows kit is a leak-free system.
To prevent unwanted media from being drawn in, the supply and exhaust air for the kit must be ducted via a pressure

compensation hole in the connection part [1].
The pressure generated in the bellows kit by the positioning motion is primarily defined by the travel speed and tubing length.

The recommended tubing length in relation to the travel speed of the drive can be read from the graph.

... $\varnothing 80/100$

Retracting

--- $\varnothing 50/63$
..... $\varnothing 80/100$

 Note

The push-in fittings in the adjacent table must be used for the pressure compensation hole.
Silencers can be used as an alternative. This reduces the travel speed slightly.

Ordering data – Bellows kit

An extended piston rod (order code ...E) → page 21 is absolutely essential when using a bellows kit.

The following table specifies the required dimension for E as a function of piston diameter and stroke of the cylinder as well as the associated bellows kit:

Order example:

Selected standards-based cylinder:

DSBF-C-32-320-PPV-A-N3-...E-R

The dimension for the corresponding E value (see table):
112 mm

Complete order reference for standards-based cylinder:

1) Corrosion resistance class CRC 3 to Festo standard FN 940070

High corrosion stress. Outdoor exposure under moderate corrosive conditions. External visible parts with primarily functional surface requirements that are in direct contact with a normal industrial environment.
