

## Remote I/O system CPX-AP-A

**FESTO**

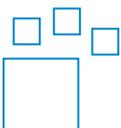

## Key features

### Key features

- Modular and lightweight IO system with IP65/IP67 protection
- Can be adapted to Festo valve terminals
- Highly flexible remote IO system with maximum performance
- Real-time capability, transmission rate of 200 Mbps full duplex
- Parameterisable and scalable
- Up to 15 modules in one remote I/O system CPX-AP-A
- Links are connected using angled fitting
- Complete IO-Link master V1.1 with data storage mechanism including device parameterisation tool
- Dedicated data channel for cyclic data (events, diagnostics, parameters) which will be used for big data (status data for connected peripherals) without influencing the deterministic behaviour of the system.
- Transmission of the cyclic process data independently of the non-time-critical data.
- Easy to integrate into standard host systems
- Extended diagnostics and predictive maintenance information is available, such as valve switching cycle counter and cable quality monitoring
- Presentation of I4.0 features
- Integrated web server
- Festo Automation Suite plug-in for extended engineering and diagnostics
- Easy to mount in any position on any mounting wall using end plates or ITEM profiles and DIN rail. Suitable for motion applications with high G-forces (up to 5 G)
- Suitable for robot applications
- Separate power supply and communications cable for establishing voltage zones (additional supply possible for every module)
- Stable data transfer and sturdy thanks to use of standard cables
- 16 A acceptable current load/ logic at 24 V DC
- Galvanically isolated output channels
- Digital electronic rating plate available
- Commissioning using normal tools from the PLC manufacturer or with the Festo Automation Suite
- High level of EMC
- Flame-retardant, halogen-free material (ideal for welding applications)

### Ordering data – Product options

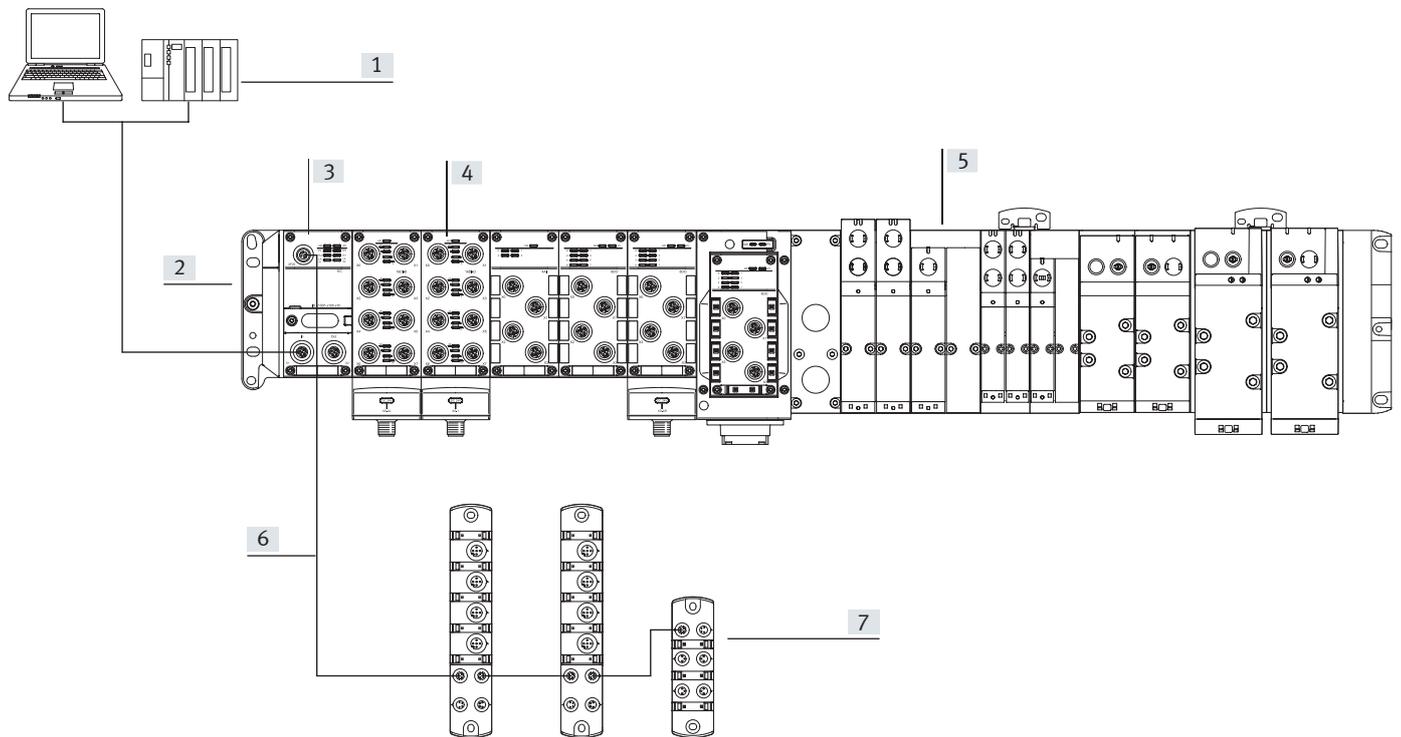

Configurable product  
This product and all its product options can be ordered using the configurator.

The configurator can be found at  
→ [www.festo.com/catalogue/...](http://www.festo.com/catalogue/...)  
Enter the part number or the type.

Part no.	Type
8079933	CPX-AP-A
8000810	VTUX-A-P-APA
8000815	VTUX-A-S-APA
8130719	VTSA-F-FB-AP
8130722	VTSA-F-CB-AP
8130716	VTSA-FB-AP
550808	MPA-FB-AP-VI

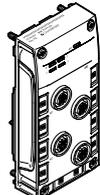

## Key features

## Overview

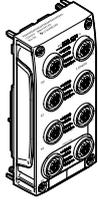

- [1] Higher-order controller
- [2] Remote I/O system CPX-AP-A
- [3] Bus interface for connecting the remote I/O system CPX-AP-A to a higher-order controller via a standard bus protocol such as PROFINET
- [4] Input module, output module or input/output module; allows sensors and actuators to be connected to the remote I/O system CPX-AP-A. Up to 15 modules per terminal possible.
- [5] Valve terminal with pneumatic interface for CPX-AP-A. Behaves like an output module within the remote I/O system CPX-AP-A.
- [6] Connecting cable for communication with further components via AP interface
- [7] Further components with AP interface

## Key features – Mounting

### Mounting

#### Wall mounting

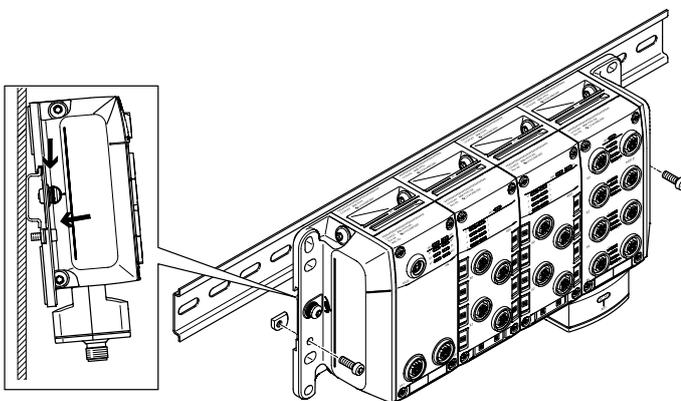

The end plates of the remote I/O system, the valve terminal and the pneumatic interface include mounting holes for wall mounting. Additional mounting brackets for the interlinking blocks of the remote I/O system are available for longer versions.

With more than 7 interlinking blocks, a mounting bracket is required every 15 cm (corresponds to 3 interlinking blocks).

The mounting brackets can be attached to one interlinking block or between two interlinking blocks.

#### DIN rail mounting

The DIN rail mounting is part of the rear profile of the interlinking blocks, the end plates and the pneumatic interface. The remote I/O system can be attached to the DIN rail using the DIN rail mounting kit.

The remote I/O system is first hooked onto the DIN rail,

then swivelled onto the DIN rail and secured in place with the clamping piece.

#### Mounting on support system with valve terminal VTSA/VTSA-F/VTSA-F-CB

When mounting on a support system, only the mounting holes in the end plates of the remote I/O system, the valve terminal and in the pneumatic interface are available.

There is no option to use mounting brackets here, and the maximum number of interlinking blocks is limited to 6 (30 cm).

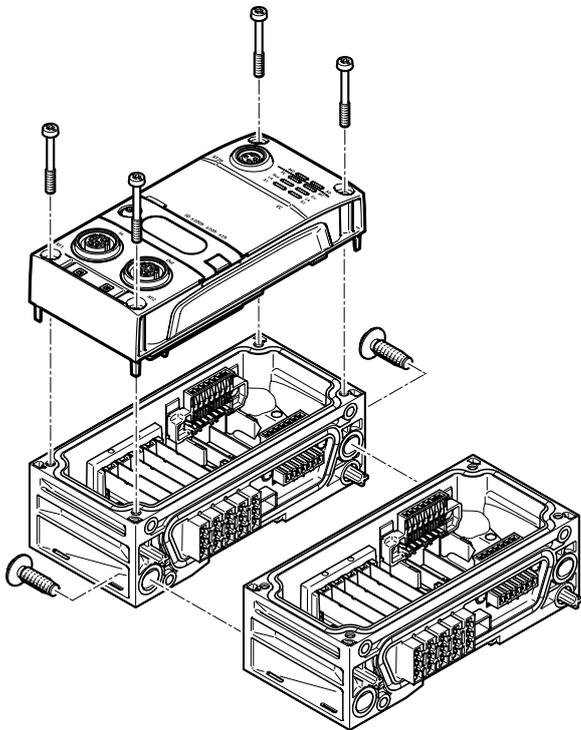

The corresponding mounting kit is required for the left end plate.

Mounting on a support system without valve terminal is not envisaged.

## Key features – Mounting

### Mounting

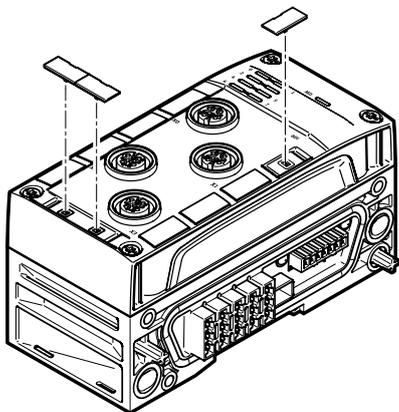

#### Assembly

The interlinking blocks are mechanically connected using an angled fitting. The CPX terminal can thus be expanded at any time.

The advantages of polymer (low weight) and metal (sturdy, high EMC compatibility) are perfectly combined by using high-quality polymer materials.

### Labelling

All modules are supplied with the same, clip-on inscription labels. The inscription label is made up of two parts and can be divided into two smaller sections if required.

Labelling templates can be downloaded from the Support Portal:  
→ Internet: CPX-AP-A  
In the “Software” area.

## Key features – Power supply

### Power supply concept

In principle, the remote I/O system CPX-AP-A has two separate electrical circuits:

- For the module electronics and the power supply for connected sensors
- For connected outputs and valves

Interlinking blocks represent the backbone of the remote I/O system with all supply cables.

They provide the power supply for the modules used on them as well as their bus connections.

The interlinking blocks provide either an easy-to-install central power supply for the entire remote I/O system or galvanically isolated, all-pin disconnectable potential groups/voltage segments or power transmission.

Choice of connection technology:

- M18
- 7/8"
- M12x1, L-coded
- Push-pull to IEC 61076-3-126

### System performance

#### Diagnostics

Detailed diagnostic functions are needed in order to quickly locate the causes of errors in the electrical installation and therefore reduce downtimes in the production plant.

A basic distinction is made between on-the-spot diagnostics using LEDs and diagnostics using a bus interface.

The remote I/O system CPX-AP-A supports on-the-spot diagnostics using LED indicators on each module. This is separate from the connection area and therefore provides an easy and good visual view of status and diagnostic information.

Module and channel-specific diagnostics are supported, for example:

- Undervoltage detection
- Short-circuit detection

The diagnostic messages can be read out via the bus interface in the higher-order controller and visualised for the central recording and evaluation of error causes. This is done using the individual bus-specific channels.

#### Indicator lights

Each module has a row of module-specific LEDs for indicating the operating status of the module and of the connected sensors or actuators.

#### Parameterisation

Various parameters are available for reading out information about the modules in the remote I/O system CPX-AP-A and for configuring the modules to the application.

The parameters are typically accessed via the higher-order controller.

## Key features – Addressing

### Addressing

The various modules of the CPX-AP-A occupy a different number of addresses within the CPX-AP-A system. The maximum address space for the bus interface depends on the performance of the fieldbus systems.

Maximum system configuration:

- 80 modules per AP string
- 1 bus interface
- 14 input and/or input/output modules and/or pneumatic interface per CPX-AP-A terminal

The maximum system configuration can be limited in individual cases by exceeding the address space or limitations of the higher-order controller.

Addresses are allocated automatically. The bus interface is assigned the address "1", all other modules are assigned an address in increasing value from left to right, viewed from the bus interface.

#### Note

Please refer to the detailed description of the configuration/ addressing rules in the technical data for the CPX-AP-A bus interface.

### Overview – Address space for CPX-AP-A bus interface

	Protocol	Max. total Inputs	Outputs
CPX-AP-A-PN-M12	PROFINET	1024 bytes	1024 bytes
CPX-AP-A-PN-CU	PROFINET	1024 bytes	1024 bytes
CPX-AP-A-PN-FO	PROFINET	1024 bytes	1024 bytes
CPX-AP-A-EC-M12	EtherCAT®	1024 bytes	1024 bytes
CPX-AP-A-EP-M12	EtherNet/IP	4096 bytes	4096 bytes

#### Note

The bandwidth of the bus interface can be restricted by the choice of module and the maximum number of modules.

## Key features – Addressing

Overview – Allocated addresses for CPX-AP-A modules		Inputs [bytes]	Outputs [bytes]

Fieldbus interface, number of pins/cores	4; 8
Fieldbus interface, galvanic isolation	Yes
Power supply, function	Incoming electronics/sensors and load and functional earth
Power supply, connection type	Plug
Power supply, connection technology	7/8" to NFPA/T3.5.29 M12x1, L-coded to EN 61076-2-111 M18x1 Push-pull to IEC 61076-3-126
Power supply, number of pins/cores	4; 5

## Datasheet – Remote I/O system

**Technical data – Electrical remote I/O system**

Nominal operating voltage DC for electronics/sensors	24 V
Nominal operating voltage DC load	24 V
Permissible voltage fluctuations, electronics/sensors	± 25%
Permissible voltage fluctuations, load	± 25%
Note on the operating voltage	SELV/PELV power supply units required; note voltage drop
Note on nominal operating voltage DC	Protected extra-low voltage to IEC 60204-1
Power failure buffering	10 ms
Max. power supply	8 ... 16 A
Typ. intrinsic current consumption at nominal operating voltage for electronic system/sensors	0.040 ... 10.000 A
Typ. intrinsic current consumption at nominal operating voltage, load	0.003 ... 10.000 A
Galvanic isolation between the supply voltages electronics/sensors and load/valves	Yes
Protection class	III
Overvoltage category	II
Protection against direct and indirect contact	SELV/PELV power supply units required
Pollution degree	2

**Technical data – Mechanical remote I/O system**

Type of mounting	Direct mounting via through-hole On DIN rail with accessories On mounting frame Screw-clamped With through-hole for M5 screw with accessories With through-hole for M6 screw with accessories With through-hole for M5 screw With through-hole for M6 screw
Product weight	450 ... 5200 g
Dimensions W x L x H	Depending on the configuration
Grid dimension	50.1 mm

**Materials – Remote I/O system**

Note on materials	RoHS-compliant; free of halogen; free of phosphoric acid ester
LABS (PWIS) conformity	VDMA24364-B2-L

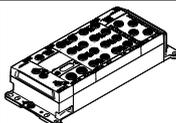

## Datasheet – Remote I/O system

Operating and environmental conditions – Remote I/O system	
Ambient temperature	-20 ... 50 °C
Note on ambient temperature	Note ambient temperature derating to IEC 61131-2:2017
Storage temperature	-20 ... 70 °C
Corrosion resistance class CRC <sup>1)</sup>	1 - Low corrosion stress
Relative humidity	5 - 95%, non-condensing
Nominal operating altitude	<= 2000 m ASL (> 79.5 kPa)
Max. setup altitude	3500 m
Note on max. setup altitude	> 2000 m ASL (< 79.5 kPa) Note ambient temperature derating to IEC 61131-2:2017
Vibration resistant	Transport application test with severity level 2 to FN 942017-4 and EN 60068-2-6
Note on vibration resistance	SG1 on DIN rail SG2 on direct mounting Transport application test with severity level 1 to FN 942017-4 and EN 60068-2-6
Shock resistance	Shock test with severity level 2 to FN 942017-5 and EN 60068-2-27
Note on shock resistance	30 g/11 ms to EN 60068-2-27 SG1 on DIN rail SG2 on direct mounting Shock test with severity level 1 to FN 942017-5 and EN 60068-2-27
CE marking (see declaration of conformity) <sup>2)</sup>	To EU EMC Directive, to EU-RoHS Directive
UKCA marking (see declaration of conformity) <sup>3)</sup>	To UK EMC regulations; to UK RoHS regulations
KC marking	KC EMC
Certification	RCM mark; c UL us - Listed (OL)
Certificate-issuing authority	UL E239998
Degree of protection	IP65; IP67
Note on degree of protection	Unused connections sealed

Configurable product This product and all its product options can be ordered using the configurator.			

## Datasheet – PROFINET interface

Interface for operating the remote I/O system CPX-AP-A on PROFINET. Data is transferred on the basis of the Ethernet standard and TCP/IP technology for communication in an industrial environment.

### Bus connection

Communication with a higher-order controller takes place via PROFINET with real-time protocol (real time RT or isochronous real time IRT).

The bus connection is provided via two equivalent interfaces which meet Ethernet requirements.

The integrated switch supports star and line topology and enables the network to be divided into segments.

### PROFINET implementation

The interface supports the PROFINET protocol on the basis of the Ethernet standard and TCP/IP technology to IEEE802.3. This guarantees a data exchange with a high data transmission rate, for example I/O data from sensors, actuators or robot controllers, PLCs or process equipment.

In addition, non-real-time critical information such as diagnostic information, configuration information, etc. can be transmitted. The Ethernet bandwidth is sufficient to transfer both data types (real-time and non-real-time) in parallel.

The interfaces support the PROFInergy profile for energy management. This makes it possible to switch off specific consumers that are not required in order to reduce energy demand.

The crossover detection function (Auto-MDI/MDI-X) is also supported. This means either patch cables or crossover cables can be used.

### General technical data – PROFINET interface

Fieldbus interface, connection technology	M12x1, D-coded to EN 61076-2-101	RJ45 to IEC 61076-3-117 (V14)	SCRJ as per IEC 61754-24-21
Max. number of modules	80		
Max. address volume for inputs	1,024 bytes		
Max. address volume for outputs	1,024 bytes		
Configuration support	GSDML file		
Module parameters	Configuration of voltage monitoring load supply PL		
Diagnostics via LED	Diagnostics per module; PROFINET communication; power supply electronics/sensors; power supply load; system diagnostics; maintenance required		
Diagnostics via bus	APDD invalid; switch-off load supply; communication error; overvoltage electronics/sensors; overvoltage load; undervoltage electronics/sensors; undervoltage load		
Internal cycle time	< 1 ms		
Reverse polarity protection	Yes		
Max. cable length	100 m PROFINET		50 m PROFINET
Mounting position	Any		

## Datasheet – PROFINET interface

Technical data – Electrical, PROFINET interface			
Fieldbus interface, connection technology	M12x1, D-coded to EN 61076-2-101	RJ45 to IEC 61076-3-117 (V14)	SCRJ as per IEC 61754-24-21
Nominal operating voltage DC for electronics/sensors	24 V		
Nominal operating voltage DC load	24 V		
Permissible voltage fluctuations, electronics/sensors	± 25%		
Permissible voltage fluctuations, load	± 25%		
Note on the operating voltage	SELV/PELV power supply units required; note voltage drop		
Note on nominal operating voltage DC	Protected extra-low voltage to IEC 60204-1		
Power failure buffering	10 ms		
Intrinsic current consumption at nominal operating voltage, electronics/sensors	Typical 80 mA	Typical 115 mA	
Intrinsic current consumption at nominal operating voltage, load	Typical 4 mA		
Galvanic isolation between the supply voltages electronics/sensors and load/valves	Yes		
Protection class	III		
Overvoltage category	II		
Pollution degree	2		

Technical data – Fieldbus interface, PROFINET interface			
Fieldbus interface, connection technology	M12x1, D-coded to EN 61076-2-101	RJ45 to IEC 61076-3-117 (V14)	SCRJ as per IEC 61754-24-21
Fieldbus interface, protocol	LLDP; MRP, MRPD (ring redundancy); PROFINET FSU; PROFINET I&MO .. 3; PROFINET IRT; PROFINET RT; PROFINET shared device; S2 system redundancy; SNMP		
Fieldbus interface, function	Bus connection incoming/outgoing		
Fieldbus interface, transmission rate	100 Mbps		
Fieldbus interface, note on transmission rate	100 Mb, switched Fast Ethernet		
Fieldbus interface, type	Ethernet		
Fieldbus interface, type of connection	2x socket		
Fieldbus interface, number of pins/cores	4	8	2
Fieldbus interface, galvanic isolation	Yes		

Technical data – Communication interface, PROFINET interface	
Communication interface, protocol	AP
Communication interface, function	System communication XF20 OUT
Communication interface, connection type	Socket
Communication interface, connection technology	M8x1, D-coded to EN 61076-2-114
Communication interface, number of pins/cores	4
Communication interface, shielding	Yes

Technical data – Mechanical, PROFINET interface			
Fieldbus interface, connection technology	M12x1, D-coded to EN 61076-2-101	RJ45 to IEC 61076-3-117 (V14)	SCRJ as per IEC 61754-24-21
Type of mounting	Screw-clamped		
Product weight	108 g	167 g	182 g
Dimensions W x L x H	(incl. interlinking block); 50.1 mm × 107.3 mm × 57.5 mm	(incl. interlinking block); 50.1 mm × 107.3 mm × 94.2 mm	
Grid dimension	50.1 mm		

## Datasheet – PROFINET interface

### Materials – PROFINET interface

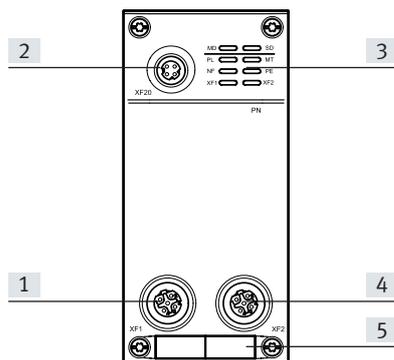

Fieldbus interface, connection technology	M12x1, D-coded to EN 61076-2-101	RJ45 to IEC 61076-3-117 (V14)	SCRJ as per IEC 61754-24-21
Housing material	PC		
Cover material	Reinforced PBT		
O-ring material	FPM		
Sealing material	–	NBR	
Flange material	–	Nickel-plated die-cast zinc	
Threaded sleeve material	High-alloy stainless steel		
Screw material	Nickel-plated steel		
Note on materials	RoHS-compliant; free of halogen; free of phosphoric acid ester		
LABS (PWIS) conformity	VDMA24364-B2-L		

### Operating and environmental conditions – PROFINET interface

Ambient temperature	-20 ... 50 °C
Storage temperature	-20 ... 70 °C
Corrosion resistance class CRC 1)	1 - Low corrosion stress
Relative humidity	5 - 95%, non-condensing
Nominal operating altitude	<= 2000 m ASL (> 79.5 kPa)
Note on ambient temperature	Note ambient temperature derating to IEC 61131-2:2017
Max. setup altitude	3,500 m
Note on max. setup altitude	> 2000 m ASL (< 79.5 kPa) Note ambient temperature derating to IEC 61131-2:2017
Vibration resistant	Transport application test with severity level 2 to FN 942017-4 and EN 60068-2-6
Note on vibration resistance	SG1 on DIN rail SG2 on direct mounting Transport application test with severity level 1 to FN 942017-4 and EN 60068-2-6
Shock resistance	Shock test with severity level 2 to FN 942017-5 and EN 60068-2-27
Note on shock resistance	30 g/11 ms to EN 60068-2-27 SG1 on DIN rail SG2 on direct mounting Shock test with severity level 1 to FN 942017-5 and EN 60068-2-27
Material fire-tested	UL94 V-0 (housing)

## Datasheet – EtherCAT® interface

Interface for operating the remote I/O system CPX-AP-A on EtherCAT®. Data is transferred on the basis of the Ethernet standard for communication in an industrial environment.

### EtherCAT® implementation

The interface supports the EtherCAT® protocol based on the Ethernet standard and TCP/IP technology to IEEE802.3.

This guarantees a data exchange with a high data transmission rate, for example I/O data from sensors or actuators.

The integrated web server provides read and write access to the most important parameters and diagnostics functions of the remote I/O system CPX-AP.

The supported "Distributed Clocks" function, for precise synchronisation of stations in an EtherCAT® network, enables applications that require simultaneously coordinated actions.

The crossover detection function (Auto-MDI/MDI-X) is also supported. This means either patch cables or crossover cables can be used.

### General technical data – EtherCAT® interface

Max. number of modules	80
Max. address volume for inputs	1024 bytes
Max. address volume for outputs	1024 bytes
Configuration support	ESI file
Module parameters	Configuration of voltage monitoring load supply PL
Diagnostics via LED	Diagnostics per module; EtherCAT RUN; power supply electronics/sensors; power supply load; system diagnostics; maintenance required
Diagnostics via bus	APDD invalid; switch-off load supply; communication error; overvoltage electronics/sensors; overvoltage load; undervoltage electronics/sensors; undervoltage load
Internal cycle time	< 1 ms
Reverse polarity protection	Yes
Max. cable length	100 m EtherCAT®
Mounting position	Any

### Technical data – Electrical, EtherCAT® interface

## Datasheet – EtherNet/IP interface

### EtherNet/IP™

Interface for operating the remote I/O system CPX-AP-A in an Ethernet network using the protocols EtherNet/IP or Modbus/TCP. Data is transmitted on the basis of Industrial Ethernet.

#### Implementation

EtherNet/IP and Modbus/TCP use the Ethernet standard and TCP/IP technology to IEEE802.3.

This guarantees a data exchange with a high data transmission rate, for example data from sensors, actuators or robot controllers, PLCs or process equipment.

In addition, non-real-time critical information such as diagnostic information, configuration information, etc. can be transmitted.

The Ethernet bandwidth is sufficient to transfer both data types (real-time and non-real-time) in parallel.

#### General technical data – EtherNet/IP interface

Max. number of modules	80
Max. address volume for inputs	4096 bytes
Note on inputs	EP: 488 bytes; Modbus: 4096 bytes
Max. address volume for outputs	4096 bytes
Note on outputs	EP: 496 bytes; Modbus: 4096 bytes
Configuration support	EDS file
Module parameters	Configuration of voltage monitoring load supply PL
Diagnostics via LED	Diagnostics per module; Ethernet/IP communication; power supply electronics/sensors; power supply load; system diagnostics; maintenance required
Diagnostics via bus	APDD invalid; switch-off load supply; communication error; overvoltage electronics/sensors; overvoltage load; undervoltage electronics/sensors; undervoltage load
Internal cycle time	< 1 ms
Reverse polarity protection	Yes
Max. cable length	100 m Ethernet/IP
Mounting position	Any

#### Technical data – Electrical, EtherNet/IP interface

Nominal operating voltage DC for electronics/sensors	24 V
Nominal operating voltage DC load	24 V
Permissible voltage fluctuations, electronics/sensors	± 25%
Permissible voltage fluctuations, load	± 25%
Note on the operating voltage	SELV/PELV power supply units required; note voltage drop

## Datasheet – IO-Link master

### Function

The IO-Link master has 4 IO-Link® connections Class B (type B), which enable any IO-Link® components to be linked up to the remote I/O system CPX-AP-A.

- IO-Link master
- Connection M12x1, 5-pin
- Status and error indication via LED

### Description

The IO-Link® communication system is used to exchange serial data from decentralised function modules (devices) at the field level.

The IO-Link master provides four external IO-Link® interfaces, at each of which a device can be connected.

The connection type corresponds to a star topology, which means that only one device can be connected to each port.

The address space, master port and connected devices can be parameterised with the aid of the Festo Automation Suite.

The Festo Automation Suite can be downloaded from the Festo website.

### General technical data – IO-Link master

Protocol	IO-Link®
Communication interface, protocol	AP
Max. address volume for inputs	33 bytes
Max. address volume for outputs	33 bytes
Configuration support	IODD file
Module parameters	Configuration of voltage monitoring load supply PL
Channel parameter	Diagnostics activated for IO-Link® device lost; port mode; target deviceID; target vendorID; target cycle time
Diagnostics via LED	Diagnostics per channel; diagnostics per module; power supply load; status per channel; status per module
Diagnostics via internal communication	IO-Link® event; sensor supply shortcut/overload; overvoltage electronics/sensors; overvoltage load; undervoltage electronics/sensors; undervoltage load
Internal cycle time	< 1 ms
Reverse polarity protection	Yes
Max. cable length	20 m with IO-Link® operation
Mounting position	Any

### Technical data – IO-Link® interface, IO-Link master

IO-Link®, protocol version	Master V 1.1
IO-Link®, communication mode	Configurable via software; SIO, COM1 (4.8 kBaud), COM2 (38.4 kBaud), COM3 (230.4 kBaud)
IO-Link®, SIO mode support	Yes
IO-Link®, port class	B
IO-Link®, number of ports	4
IO-Link®, process data width OUT	Can be parameterised 8 - 128 bytes
IO-Link®, process data width IN	Can be parameterised 12 - 132 bytes
IO-Link®, communication	C/Q LED green
IO-Link®, minimum cycle time	Depending on minimally supported cycle time of connected IO-Link® device
Electrical connection for IO-Link®, connection type	4x socket
Electrical connection for IO-Link®, connection technology	M12x1, A-coded to EN 61076-2-101
Electrical connection for IO-Link®, number of pins/cores	5

## Datasheet – IO-Link master

Technical data – Electrical, IO-Link® master	
Nominal operating voltage DC for electronics/sensors	24 V
Nominal operating voltage DC load	24 V
Permissible voltage fluctuations, electronics/sensors	± 25%
Permissible voltage fluctuations, load	± 25%
Note on the operating voltage	SELV/PELV power supply units required; note voltage drop
Note on nominal operating voltage DC	Protected extra-low voltage to IEC 60204-1
Power failure buffering	10 ms
Intrinsic current consumption at nominal operating voltage, electronics/sensors	Typical 40 mA
Intrinsic current consumption at nominal operating voltage, load	Typical 4 mA
Max. power supply per channel	2.1 A (50 W lamp load), per channel pair
Max. total current of inputs per module	2
Max. total current outputs per module	4
Galvanic isolation between the supply voltages electronics/sensors and load/valves	Yes
Electrical isolation of outputs between channel - internal communication	Yes
Fuse protection inputs (short circuit)	Internal electronic fuse per module
Protection class	III
Overvoltage category	II
Pollution degree	2

Technical data – Mechanical, IO-Link master	
Type of mounting	Screw-clamped
Product weight	90 g
Dimensions W x L x H	(incl. interlinking block); 50.1 mm x 107.3 mm x 57.5 mm
Grid dimension	50.1 mm

Materials – IO-Link master	
Housing material	PC
Cover material	Reinforced PBT
O-ring material	FPM
Screw material	Nickel-plated steel
Note on materials	RoHS-compliant; free of halogen; free of phosphoric acid ester
LABS (PWIS) conformity	VDMA24364-B2-L

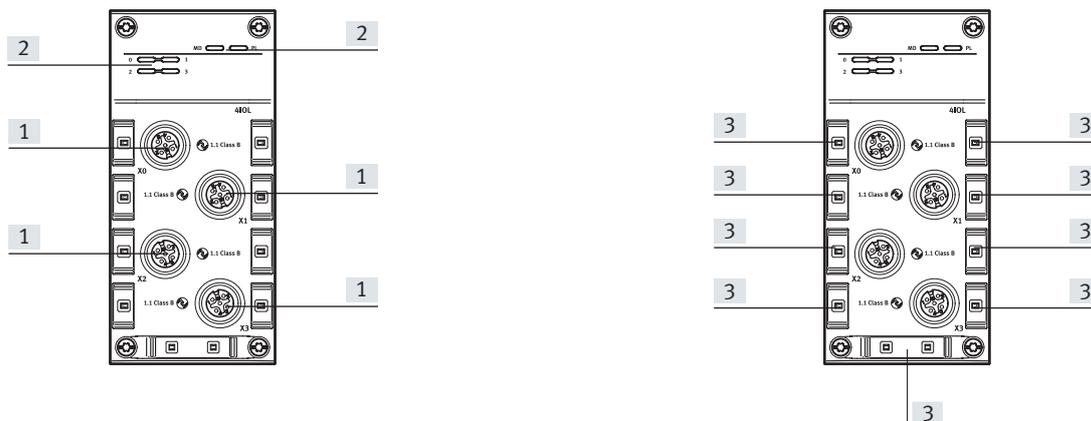

## Datasheet – IO-Link master

### Operating and environmental conditions – IO-Link master

Ambient temperature	-20 ... 50 °C
Note on ambient temperature	Note ambient temperature derating to IEC 61131-2:2017
Storage temperature	-20 ... 70 °C
Corrosion resistance class CRC <sup>1)</sup>	1 - Low corrosion stress
Relative humidity	5 - 95%, non-condensing
Nominal operating altitude	<= 2000 m ASL (> 79.5 kPa)
Max. setup altitude	3500 m
Note on max. setup altitude	> 2000 m ASL (< 79.5 kPa) Note ambient temperature derating to IEC 61131-2:2017
Vibration resistant	Transport application test with severity level 2 to FN 942017-4 and EN 60068-2-6
Note on vibration resistance	SG1 on DIN rail SG2 on direct mounting Transport application test with severity level 1 to FN 942017-4 and EN 60068-2-6
Shock resistance	Shock test with severity level 2 to FN 942017-5 and EN 60068-2-27
Note on shock resistance	30 g/11 ms to EN 60068-2-27 SG1 on DIN rail SG2 on direct mounting Shock test with severity level 1 to FN 942017-5 and EN 60068-2-27
Material fire-tested	UL94 V-0 (housing)

## Datasheet – Digital input modules

### Function

Digital input modules allow electric sensors to be connected according to IEC 61131-2 type 3 (inductive, capacitive) with an operating voltage of 24 V DC.

- Input modules for 24 V DC operating voltage
- Connection M8x1, 3-pin
- Connection M12x1, 5-pin
- Spring-loaded terminal connection
- Status and error indication via LED
- Electronic fuse per channel

### General technical data – Input modules

Electrical connection, input, connection type	8x socket M8x1, A-coded	4x socket M12x1, A-coded	8x terminal strip	8x socket M12x1, A-coded
Communication interface, protocol	AP			
Number of inputs	8	8	8	16
Max. address volume for inputs	1 bytes	1 bytes	1 bytes	2 bytes
Channel parameter	Input debounce time

## Datasheet – Analogue input modules

### Function

Analogue input modules enable different analogue sensors to be connected to the remote I/O system CPX-AP-A. The input module can be parameterised for detecting different data (voltage, current, resistance, temperature).

- Input modules for 24 V DC operating voltage
- Connection M12x1, 5-pin
- Status and error indication via LED
- Electronic fuse per channel

### General technical data – Input modules

Communication interface, protocol	AP
Number of inputs	4
Max. address volume for inputs	8 bytes
Channel parameter	Measured value smoothing; signal range; lower/upper limit value; activation of linear scaling; unit for temperature measurement; hysteresis for measured value monitoring
Diagnostics via LED	Diagnostics per module; status per channel
Diagnostics via internal communication	Wire break; communication errors; short circuit/overload; parameter error; parameterisation error; overload analogue inputs; upper limit value not observed; overvoltage electronics/sensors; underflow/overflow; lower limit value not observed; undervoltage electronics/sensors
Reverse polarity protection	Yes
Max. cable length	30 m inputs
Mounting position	Any

### Technical data – Interfaces, input modules

Measured variable	Voltage; current; temperature; resistance
Electrical connection, input, function	Digital input
Electrical connection, input, connection technology	M12x1 A-coded to EN 61076-2-101
Electrical connection, input, connection type	4x socket
Electrical connection, input, number of pins/cores	5
Data format	15 bit + prefix; linear scaling
Signal range	-10 - 10 V -5 - 5 V 0 - 10 V 0 - 20 mA 0 - 500 Ohm 1 - 5 V 4 - 20 mA
Repetition accuracy	±0.025% at 25 °C
Basic error limit at 25 °C	±0.1% for voltage ±0.1% for current ±0.2% for resistor ±0.4% for temperature
Operating error limit related to the ambient temperature range	±0.15% for voltage ±0.15% for current ±0.35% for resistor ±0.9% for temperature

## Datasheet – Digital output modules

### Function

Digital output modules allow electrical consumers to be connected according to IEC 61131-2 type 0.5 or IEC 61131-2 type 2 (valves, contactors or display components) with an operating voltage of 24 V DC.

- Output modules for 24 V DC operating voltage
- Connection M8x1, 3-pin
- Connection M12x1, 5-pin
- Spring-loaded terminal connection
- Status and error indication via LED
- Electronic fuse protection against short circuit or overload with automatic resetting
- Slow response; possible short-term increase in current requirement

### General technical data – Output modules

Communication interface, protocol	AP
Number of outputs	8
Max. address volume for outputs	1 bytes
Module parameters	Configuration of voltage monitoring of load supply PL; behaviour after short circuit/overload at output
Diagnostics via LED	Diagnostics per channel; diagnostics per module; power supply load; status per channel
Diagnostics via internal communication	Switch-off load supply; communication error; short circuit/overload output signal; overvoltage electronics/sensors; overvoltage load; undervoltage electronics/sensors; undervoltage load
Reverse polarity protection	Yes
Max. cable length	30 m outputs
Mounting position	Any

## Datasheet – Digital input/output modules

### Function

Digital input/output modules allow electric sensors to be connected according to IEC 61131-2 type 3 (inductive, capacitive) and electrical consumers to IEC 61131-2 type 0.5 with an operating voltage of 24 V DC.

- Input/output modules for 24 V DC operating voltage
- Connection M8x1, 4-pin
- Connection M12x1, 5-pin
- Spring-loaded terminal connection
- Status and error indication via LED
- Electronic fuse protection against short circuit or overload with automatic resetting
- Slow response; possible short-term increase in current requirement

### General technical data – Input/output modules

Communication interface, protocol	AP
Number of inputs	12
Number of outputs	4
Max. address volume for inputs	2 bytes
Max. address volume for outputs	1 bytes
Module parameters	Configuration of voltage monitoring of load supply PL; behaviour after short circuit/overload, analogue output
Channel parameter	Input debounce time
Diagnostics via LED	(Outputs) Diagnostics per channel; (outputs) power supply load; (inputs-outputs) diagnostics per module; (inputs-outputs) status per channel
Diagnostics via internal communication	Switch-off load supply; communication error; short circuit/overload output signal; sensor supply, short circuit/overload; overvoltage electronics/sensors; overvoltage load; undervoltage electronics/sensors; undervoltage load
Reverse polarity protection	Yes
Max. cable length	30 m outputs; 30 m inputs
Mounting position	Any

## Datasheet – Digital input/output modules

Technical data – Interfaces, input/output modules			
Electrical connection, connection type	8x socket M8x1, A-coded	8x socket M12x1, A-coded	8x terminal strip
Electrical connection, input, function	Digital input		
Electrical connection, input, connection type	6x socket		8x terminal strip
Electrical connection, input, connection technology	M8x1, A-coded to EN 61076-2-104	M12x1 A-coded to EN 61076-2-101	Spring terminal
Electrical connection, input, number of pins/cores	4	5	4
Electrical connection for input, conductor cross-section	–	–	0.25 ... 1.5 mm <sup>2</sup>
Electrical connection for input, AWG conductor cross-section	–	–	AWG24 ... AWG16
Electrical connection for input, note on conductor cross-section	–	–	0.25 ... 1.5 mm <sup>2</sup> for flexible conductor with wire ferrules and rigid conductors 0.13 ... 1.5 mm <sup>2</sup> for flexible conductors without wire ferrules
Electrical connection, output, function	Digital output		
Electrical connection, output, connection type	2x socket		8x terminal strip
Electrical connection, output, connection technology	M8x1, A-coded to EN 61076-2-104	M12x1 A-coded to EN 61076-2-101	Spring terminal
Electrical connection, output, number of pins/cores	4	5	4
Electrical connection for output, conductor cross-section	–	–	0.25 ... 1.5 mm <sup>2</sup>
Electrical connection for output, conductor cross-section AWG	–	–	AWG24 ... AWG16
Electrical connection for output, note on conductor cross-section	–	–	0.13 ... 1.5 mm <sup>2</sup> for flexible conductors without wire ferrules
Switching logic, inputs	PNP (positive switching) 2-wire sensors to IEC 61131-2 3-wire sensors to IEC 61131-2		
Switching logic, outputs	PNP (positive switching)		
Input characteristics	To IEC 61131-2, type 3		
Characteristic curve of outputs	To IEC 61131-2, type 0.5		
Switching level	Signal 0: ≤ 5 V Signal 1: ≥ 11 V		
Input debounce time	0.1 ms; 3 ms (standard); 10 ms; 20 ms		
Output delay with resistive load	Signal change 0->1: < 200 µs Signal change 1->0: < 200 µs		

## Datasheet – Digital input/output modules

Technical data – Electrical, input/output modules	
Nominal operating voltage DC for electronics/sensors	24 V
Nominal operating voltage DC load	24 V
Permissible voltage fluctuations, electronics/sensors	± 25%
Permissible voltage fluctuations, load	± 25%
Note on the operating voltage	SELV/PELV power supply units required; note voltage drop
Note on nominal operating voltage DC	Protected extra-low voltage to IEC 60204-1
Power failure buffering	10 ms
Intrinsic current consumption at nominal operating voltage, electronics/sensors	Typical 40 mA
Intrinsic current consumption at nominal operating voltage, load	Typical 5 mA
Max. power supply per channel	0.5 A
Max. total current of inputs per module	1.8 A
Max. total current outputs per module	2 A
Galvanic isolation between the supply voltages electronics/sensors and load/valves	Yes
Electrical isolation of inputs between channels	No
Electrical isolation of inputs between channel - internal communication	Yes
Electrical isolation of outputs between channels	No
Electrical isolation of outputs between channel - internal communication	Yes
Fuse protection inputs (short circuit)	Internal electronic fuse per module
Behaviour after end of overload of the sensor supply	Automatic return
Fuse protection outputs (short circuit)	Internal electronic fuse per channel
Behaviour after end of overload of the outputs	No automatic return
Protection class	III
Overvoltage category	II
Pollution degree	2

Technical data – Mechanical, input/output modules			
Electrical connection, connection type	8x socket M8x1, A-coded	8x socket M12x1, A-coded	8x terminal strip
Type of mounting	Screw-clamped		
Product weight	88 g	98 g	97 g
Dimensions W x L x H	(incl. interlinking block); 50.1 mm x 107.3 mm x 57.5 mm		
Grid dimension	50.1 mm		

Materials – Input/output modules	
Housing material	PC
Cover material	Reinforced PBT
O-ring material	FPM
Screw material	Nickel-plated steel
Note on materials	RoHS-compliant; free of halogen; free of phosphoric acid ester
LABS (PWIS) conformity	VDMA24364-B2-L

## Datasheet – End plates

### Function

The end plates form the lateral end of the remote I/O system CPX-AP-A and provide mounting holes for mounting on wall, DIN rail or support system.

### General technical data – End plates

Mounting position	Any, on DIN rail: horizontal
-------------------	------------------------------

### Technical data – Electrical, end plates

Protection class	III
Overvoltage category	II

### Technical data – Mechanical, end plates

	Left end plate	Right end plate
Type of mounting	Direct mounting via through-hole; on DIN rail with accessories; on mounting frame; with through-hole for screw M5; with through-hole for screw M6	
Product weight	120 g	116 g
Dimensions W x L x H	(Installation dimensions); 30.4 mm x 117.2 mm x 53.6 mm	
Grid dimension	50.1 mm	

### Materials – End plates

	Left end plate	Right end plate
End plate material	Coated die-cast aluminium	Coated die-cast aluminium
Sealing material	–	Polyurethane foam
Screw material	Nickel-plated steel; galvanised steel	Nickel-plated steel
Note on materials	RoHS-compliant; free of halogen; free of phosphoric acid ester	RoHS-compliant; free of halogen; free of phosphoric acid ester
LABS (PWIS) conformity	VDMA24364-B2-L	VDMA24364-B2-L

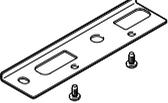

### Operating and environmental conditions – End plates

Ambient temperature	-20 ... 50 °C
Note on ambient temperature	Note ambient temperature derating to IEC 61131-2:2017
Storage temperature	-20 ... 70 °C
Corrosion resistance class CRC <sup>1)</sup>	1 - Low corrosion stress
Relative humidity	5 - 95%, non-condensing
Nominal operating altitude	<= 2000 m ASL (> 79.5 kPa)
Max. setup altitude	3500 m
Note on max. setup altitude	> 2000 m ASL (< 79.5 kPa) Note ambient temperature derating to IEC 61131-2:2017
Vibration resistant	Transport application test with severity level 2 to FN 942017-4 and EN 60068-2-6
Note on vibration resistance	SG1 on DIN rail SG2 on direct mounting Transport application test with severity level 1 to FN 942017-4 and EN 60068-2-6
Shock resistance	Shock test with severity level 2 to FN 942017-5 and EN 60068-2-27
Note on shock resistance	30 g/11 ms to EN 60068-2-27 SG1 on DIN rail SG2 on direct mounting Shock test with severity level 1 to FN 942017-5 and EN 60068-2-27

## Datasheet – End plates

Ordering data		Part no.	Type
	Left end plate	<b>8112476</b>	<b>CPX-AP-A-EPL</b>
	Right end plate	<b>8112477</b>	<b>CPX-AP-A-EPR</b>

Ordering data – Accessories				
	Description	Pack size	Part no.	Type
<b>Mounting</b>				
	For DIN rail mounting	–	<b>8159824</b>	<b>CAFM-X5-H</b>
	For mounting on support system with valve terminal VTSA/VTSA-F/VTSA-F-CB	–	<b>8130845</b>	<b>CAFM-X5-K</b>

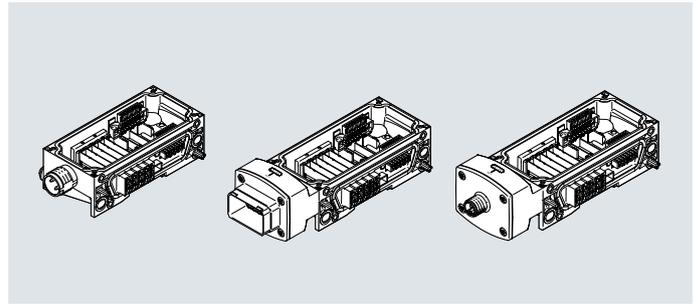

## Datasheet – Interlinking block with system supply

### Function

Interlinking blocks ensure the electrical supply of all other CPX-AP-A modules. They have contact rails, from which the other CPX components on the interlinking modules are supplied with power. The internal division of the power supply allows specific areas of the sensors and actuators to be switched off individually.

### Application area

- 24 V DC supply voltage for the electronics of the remote I/O system CPX-AP-A
- 24 V DC supply voltage for inputs
- 24 V DC supply voltage for valves
- 24 V DC supply voltage for outputs

### General technical data – System supply for interlinking blocks

Mounting position	Any, on DIN rail: horizontal
-------------------	------------------------------

### Technical data – Interfaces, system supply for interlinking blocks

Power supply, connection technology	7/8" to NFPA/T3.5.29	M12x1, L-coded to EN 61076-2-111	M18x1	Push-pull to IEC 61076-3-126
Power supply, function	Incoming electronics/sensors and load and functional earth			
Power supply, connection type	Plug			
Power supply, number of pins/cores	5		4	5
Power supply, conductor cross-section	1.5 mm <sup>2</sup>	2.5 mm <sup>2</sup>

## Datasheet – Interlinking module

### Function

Interlinking blocks ensure the electrical supply of all other CPX-AP-A modules. They have contact rails, from which the other CPX components on the interlinking modules are supplied with power. The internal division of the power supply allows specific areas of the sensors and actuators to be switched off individually.

### Application area

- All voltages are fed through to the next module by means of the interlinking blocks without supply.
- The connected electronics module for inputs/outputs or bus node taps off the required voltage.

### General technical data – Interlinking module for interlinking blocks

Mounting position	Any, on DIN rail: horizontal
-------------------	------------------------------

### General technical data – Electrical, interlinking module for interlinking blocks

Nominal operating voltage DC for electronics/sensors	24 V
Nominal operating voltage DC load	24 V
Note on nominal operating voltage DC	Protected extra-low voltage to IEC 60204-1
Protection class	III
Overvoltage category	II

### General technical data – Mechanical, forwarding supply for interlinking blocks

Type of mounting	On DIN rail with accessories; with through-hole for M5 screw with accessories; with through-hole for screw M6 with accessories
Product weight	97 g
Dimensions W x L x H	(Installation dimensions); 50.1 mm x 107.3 mm x 35 mm
Grid dimension	50.1 mm

### Materials – Forwarding supply for interlinking blocks

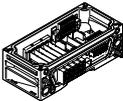

Housing material	Reinforced PA
Sealing material	Polyurethane foam
Screw material	Nickel-plated steel
Note on materials	RoHS-compliant; free of halogen; free of phosphoric acid ester
LABS (PWIS) conformity	VDMA24364-B2-L

## Datasheet – Interlinking module

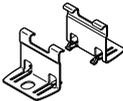

**Operating and environmental conditions – Interlinking module for interlinking blocks**

Ambient temperature	-20 ... 50 °C
Note on ambient temperature	Note ambient temperature derating to IEC 61131-2:2017
Storage temperature	-20 ... 70 °C
Corrosion resistance class CRC <sup>1)</sup>	1 - Low corrosion stress
Relative humidity	5 - 95%, non-condensing
Nominal operating altitude	<= 2000 m ASL (> 79.5 kPa)
Max. setup altitude	3500 m
Note on max. setup altitude	> 2000 m ASL (< 79.5 kPa) Note ambient temperature derating to IEC 61131-2:2017
Vibration resistant	Transport application test with severity level 2 to FN 942017-4 and EN 60068-2-6
Note on vibration resistance	SG1 on DIN rail SG2 on direct mounting Transport application test with severity level 1 to FN 942017-4 and EN 60068-2-6
Shock resistance	Shock test with severity level 2 to FN 942017-5 and EN 60068-2-27
Note on shock resistance	30 g/11 ms to EN 60068-2-27 SG1 on DIN rail SG2 on direct mounting Shock test with severity level 1 to FN 942017-5 and EN 60068-2-27
Material fire-tested	UL94 V-0 (housing)

## Datasheet – Pneumatic interface for valve terminals VTUX

### Function

With the pneumatic interface for VTUX, a valve terminal VTUX can be operated as part of the remote I/O system CPX-AP-A.

- Indication of power supply and module diagnostics via LED indicators
- Up to 128 solenoid coils
- Short circuit shutdown, short circuit diagnostics and switching cycle counter

### General technical data – Pneumatic interface for VTUX

Compatible with	Valve terminal VTUX-A-P	Valve terminal VTUX-A-S
Size	1 2	
Valve terminal design	Valve sizes can be mixed	
Communication interface, protocol	AP	
Max. address volume for outputs	4 bytes	
Max. no. of solenoid coils	32	128
Module parameters	Configuration of voltage monitoring load supply PL; behaviour in error state	
Diagnostics via LED	Diagnostics per module; power supply load	
Diagnostics via internal communication	Switch-off load supply; overvoltage electronics/sensors; undervoltage electronics/sensors	Load supply undervoltage PL; logic supply undervoltage PS
Undervoltage load/valves (diagnostic message)	≤21.1 V	
Reverse polarity protection	Yes	

### Technical data – Electrical, pneumatic interface for VTUX

Nominal operating voltage DC for electronics/sensors	24 V
Nominal operating voltage DC load	24 V
Permissible voltage fluctuations, electronics/sensors	± 25%
Permissible voltage fluctuations, load	± 10%
Note on the operating voltage	SELV/PELV power supply units required; note voltage drop
Power failure buffering	10 ms
Intrinsic current consumption at nominal operating voltage, electronics/sensors	Typical 27 mA
Intrinsic current consumption at nominal operating voltage, load	typ. 13 mA
Power consumption at 24 VDC	650 mW
Power supply, function	Incoming electronics/sensors and load
Power transmission, function	Outgoing electronics/sensors and load
Electrical isolation of outputs between channel - internal communication	Yes
Fuse protection (short circuit)	Internal electronic fuse per channel
Inductive protective circuit	Integrated
Overvoltage category	II
Protection against direct and indirect contact	PELV, SELV
Pollution degree	2

## Datasheet – Pneumatic interface for valve terminals VTUX

**Technical data – Mechanical, pneumatic interface for VTUX**

Compatible with	Valve terminal VTUX-A-P	Valve terminal VTUX-A-S
Type of mounting	With through-hole for M5 screw	
Type of mounting sub-base	Via through-hole	
Product weight	126.7 g	120.7 g
Dimensions W x L x H	35.2 mm x 117.2 mm x 56.1 mm	
Max. tightening torque for wall mounting	6 Nm	
Connection position	On the side	
Pneumatic connection 1	For 15 mm cartridge	
Pneumatic connection 5	For 15 mm cartridge	

**Materials – Pneumatic interface for VTUX**

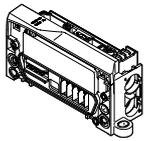

Compatible with	Valve terminal VTUX-A-P	Valve terminal VTUX-A-S
Sub-base material	Reinforced PA	
Cover material	Reinforced PA	Reinforced PBT
Sealing material	NBR	
Clamp material	High-alloy stainless steel	
Sleeve material	High-alloy stainless steel	
Nut material	High-alloy stainless steel	
Note on materials	RoHS-compliant	
LABS (PWIS) conformity	VDMA24364-B1/B2-L	

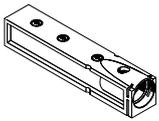

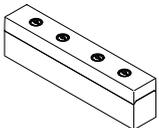

**Operating and environmental conditions – Pneumatic interface for VTUX**

Compatible with	Valve terminal VTUX-A-P	Valve terminal VTUX-A-S
Ambient temperature	-20 ... 50 °C	-5 ... 50 °C
Storage temperature	-20 ... 70 °C	
Corrosion resistance class CRC <sup>1)</sup>	2 - Moderate corrosion stress	
Relative humidity	5 - 95%	
Nominal operating altitude	≤ 2000 m above sea level	
Max. setup altitude	3,500 m	
Vibration resistant	Transport application test with severity level 2 to FN 942017-4 and EN 60068-2-6	
Shock resistance	Shock test with severity level 2 to FN 942017-5 and EN 60068-2-27	
CE marking (see declaration of conformity) <sup>2)</sup>	To EU EMC Directive, to EU-RoHS Directive	
UKCA marking (see declaration of conformity)	To UK EMC regulations; to UK RoHS regulations	
KC marking	KC EMC	
Certification	RCM	
Degree of protection	IP65

## Datasheet – Pneumatic interface for valve terminals VTSA

### Function

With the pneumatic interface, a valve terminal VTSA can be operated as part of the remote I/O system CPX-AP-A.

- Indication of status and error messages via LED indicators
- Up to 32 valve positions with up to 32 solenoid coils
- Voltage supply and forwarding possible
- Short circuit shutdown, short circuit diagnostics and switching cycle counter

### Implementation

Pneumatic interface for valve terminals VSTA, like an interlinking module, have a module slot for a CPX-AP-A module.

All CPX-AP-A modules can be mounted in this slot, e.g. bus interface and input/output modules.

The pneumatic connection includes mounting options for wall, DIN rail and carrier system mounting.

### General technical data – Pneumatic interface for VTSA

Module code (hex/dec)	0x3040/12352d	0x3041/12353d	0x3042/12354d	0x3044/12356d	0x3045/12357d
