

Mini slides DGSL

FESTO

Festo Core Range

Solves the majority of your automation tasks

Worldwide:
Simply good:
Fast:

Quickest delivery – wherever, whenever
Expected high Festo quality
Easy and fast to select

With the Festo Core Range, we have selected the most important products and functions from our broad product catalogue, and added the quickest delivery.

The Core Range offers you the best value for your automation tasks.

Just look
for the
star!

Key features

General

- Double-acting drives
- Wide range of mounting options
- System product for handling and assembly technology

- Highly flexible thanks to versatile assembly and mounting options on:
 - Drive body, slide, yoke plate

The technology in detail

[1] Cushioning

- Choice of five cushioning types:
 - Elastic cushioning without metal end position (P)
 - Elastic cushioning without metal end position, short design (E)
 - Elastic cushioning with metal end position (P1)
 - Shock absorber (Y3)
 - Shock absorber with reducing sleeve (Y11)
- Alternatives:
 - Without cushioning (N)

[2] Cover

→ Page 47

- The cover stops foreign parts or dirt getting into the guide
- The cover comes in different lengths and can be shortened as required by the customer

[3] Rough stroke adjustment

→ Page 10

- The end stop for the advanced end position can be adjusted mechanically, for example to shorten the stroke

[4] Clamping unit

→ Page 40

- Mechanical clamping for fixing the slide in any position; frictional locking (C)

[4] End-position locking

→ Page 40

- Mechanical locking when the end position is reached, for fixing the slide in the unpressurised, retracted state; positive locking (E3)

[5] Innovative guide unit

- Wide roller track, providing extremely high rigidity
- High load capacity
- High precision
- Housing and steel slide form a guide, there are no accumulative tolerances

[6] Position sensing

- Proximity sensors can be integrated, so there are no projecting parts
- Two slots for mounting
- Clearly visible from the side and from above

[7] Supply ports

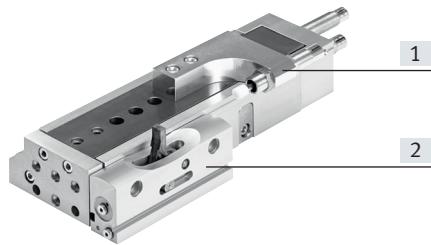

- Choice of two sides:
 - On the front
 - On the side

System example

The technology in detail

Intermediate-position module

→ Page 48

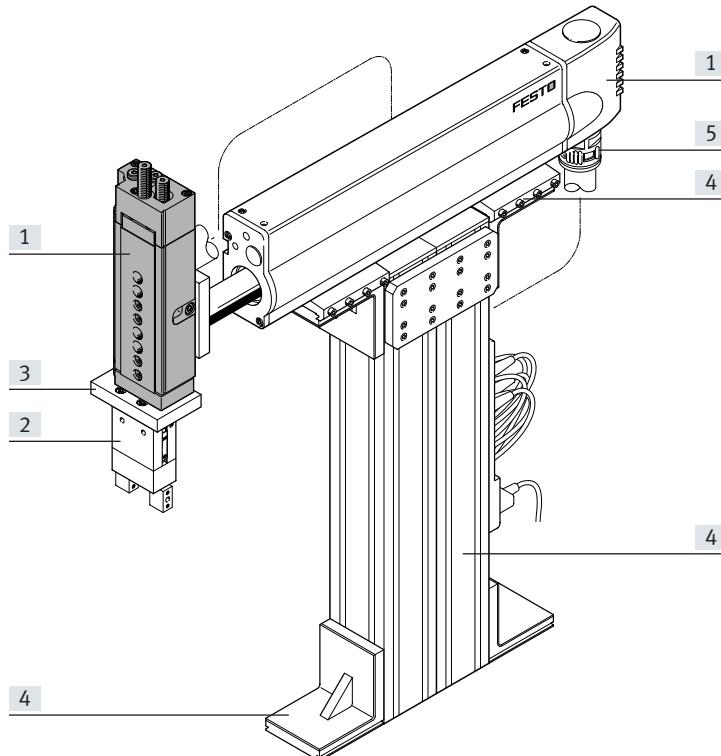

The intermediate-position module enables an additional adjustable position within the stroke range.

- [1] Shock absorber retainer
- [2] Intermediate-position module

- The symmetrical design means that the intermediate position can be approached when advancing or retracting, depending on the assembly
- Can be travelled through from the end position
- Possible to continue on directly from the intermediate position
- Easy to assemble
- Sensing of the stop lever position is possible

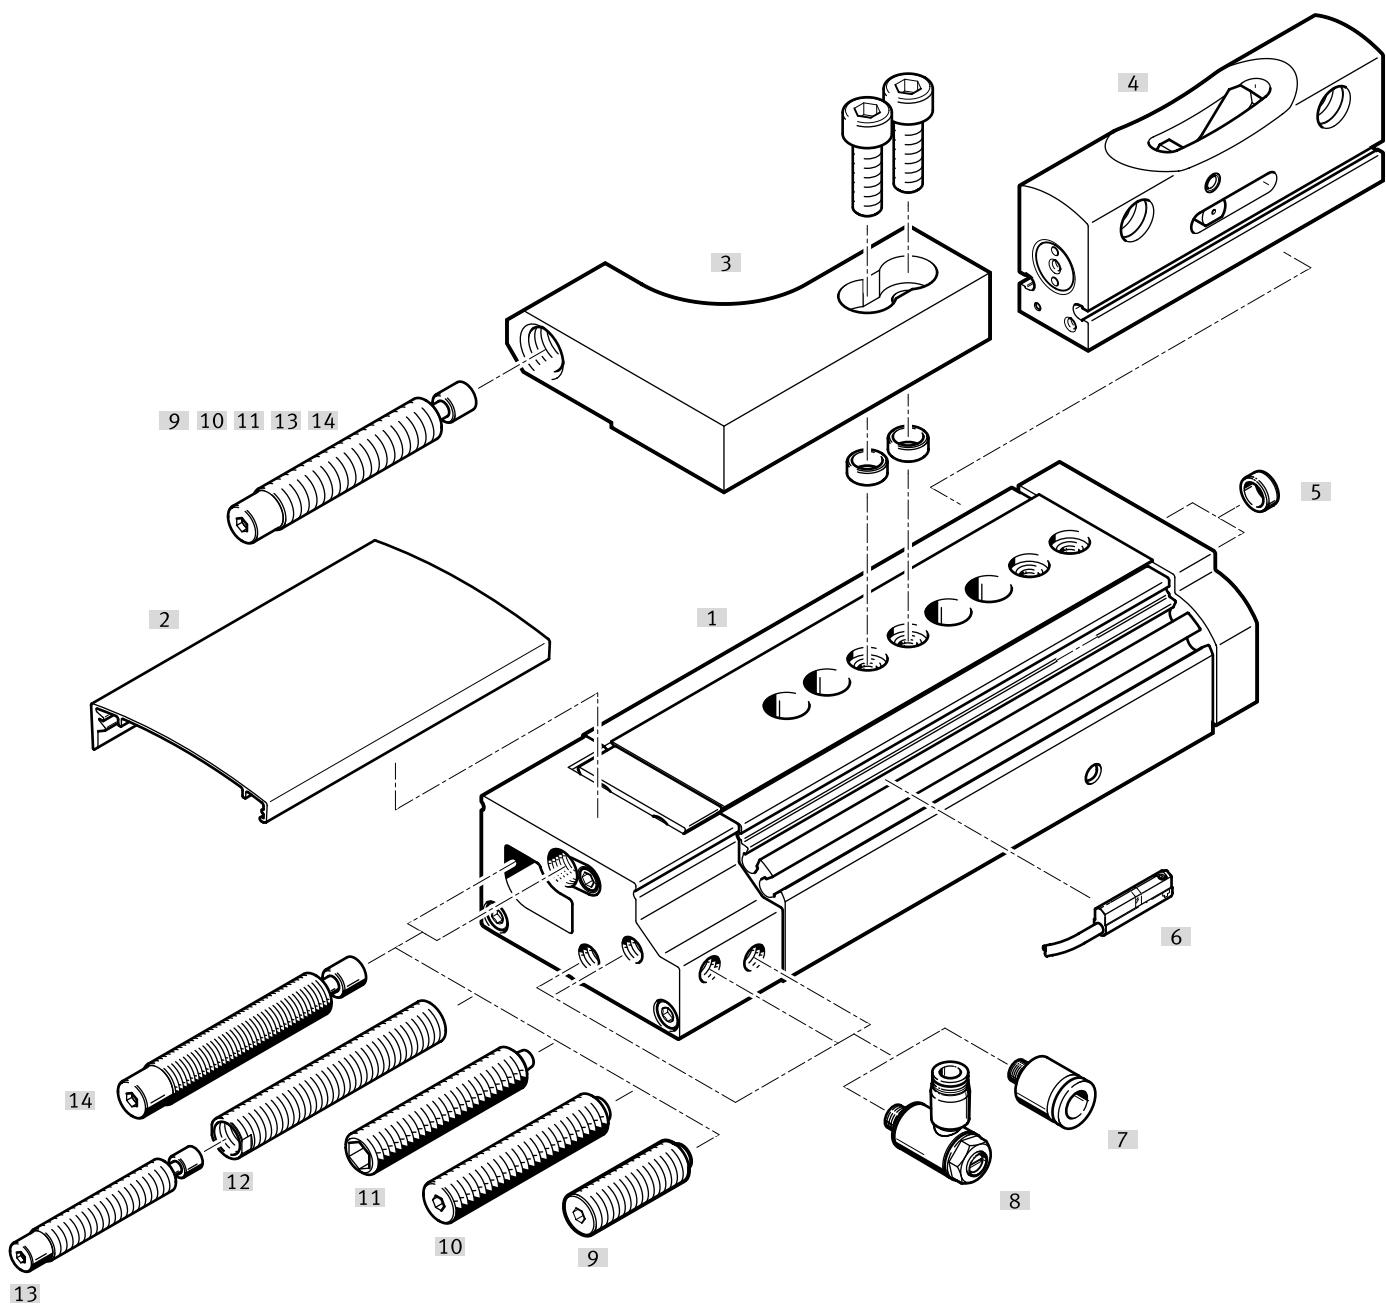

System product for handling and assembly technology

System components and accessories

	Description	→ Page/Internet
[1] Drives	Wide range of combinations possible within handling and assembly systems	drive
[2] Gripper	Wide range of variations possible within handling and assembly technology	gripper
[3] Adapter	For drive/drive connections For drive/gripper connections	54 adapter kit
[4] Basic components	Profiles and profile connections as well as profile/drive connections	basic component
[5] Installation elements	For a clear, safe layout of electrical cables and tubes	installation component
- Axes	Wide range of combinations possible within handling and assembly systems	axis
- Motors	Servo and stepper motors, with or without gear unit	motor

Peripherals overview

 - **Note**
Operation without cushioning components is not permitted.

Datasheet

Parallelism [mm]

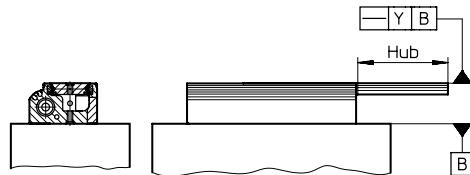

The term parallelism refers to the accuracy of alignment between the mounting surface and the slide surface.

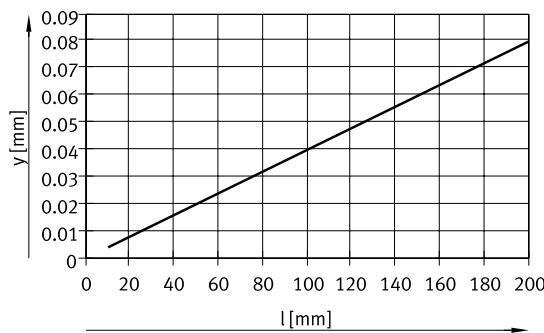

Size	Stroke [mm]	4	6	8	10	12	16	20	25
Parallelism X	10	0.02	0.02	0.02	0.02	0.02	0.02	0.02	0.02
	20	0.02	0.02	0.02	0.02	0.025	0.025	0.025	0.025
	30	0.025	0.025	0.025	0.025	0.025	0.025	0.03	0.03
	40	—	0.025	0.025	0.025	0.03	0.03	0.035	0.035
	50	—	0.03	0.03	0.03	0.035	0.035	0.04	0.04
	80	—	—	0.035	0.035	0.04	0.04	0.045	0.045
	100	—	—	—	0.045	0.05	0.05	0.055	0.055
	150	—	—	—	—	0.075	0.075	0.08	0.08
	200	—	—	—	—	—	—	0.08	0.08

Linearity [mm]

The term linearity refers to the accuracy of alignment between the mounting surface and the slide surface as a function of the stroke.

Linear travel accuracy y as a function of stroke length l

Datasheet

Adjustable end-position range

Rough adjustment of the front end position

With the mini slide DGSL, the advanced fixed stop can be relocated by swapping it with the cover.

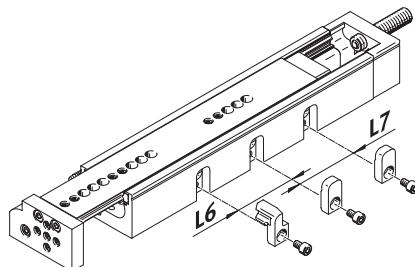

This permits a stroke reduction down to the next but one smaller standard stroke through a combination of rough and precision adjustments.

Advantages:

- Can be flexibly adapted to the application
- Integrated, which means reduced conversion effort and costs
- Large setting range

Note
Removal of the fixed stops can severely damage the mini slide DGSL.

Size Stroke [mm]	4		6		8		10		12		16		20		25	
	L6	L7														
10	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—
20	10	—	14	—	10	—	—	—	—	—	—	—	—	—	—	—
30	10	—	14	—	16	—	—	—	—	—	—	—	—	—	—	—
40	—	—	14	—	16	—	—	—	—	—	—	—	—	—	—	—
50	—	—	14	14	16	—	—	—	—	—	—	—	—	—	—	—
80	—	—	—	—	16	16	24	—	29	—	35	—	—	—	55	—
100	—	—	—	—	—	—	24	24	29	—	35	—	44	—	55	—
150	—	—	—	—	—	—	—	—	29	29	35	—	44	—	55	—
200	—	—	—	—	—	—	—	—	—	—	—	—	44	44	55	—

Example:

DGSL-12-150-...

Max. stroke = 150 mm

By repositioning the fixed stop by the dimension L6:
Stroke = 150 - 29 = 121 mm

By repositioning the fixed stop by the dimension L6 and L7:
Stroke = 150 - 29 - 29 = 92 mm

In addition, the stroke can be reduced through a precision adjustment:
Stroke = 150 - 29 - 29 - 29
= 63 mm

Precision adjustment of the advanced and retracted end position → page 11

Datasheet

Adjustable end-position range

Precision adjustment of the advanced and retracted end position

Precision adjustment of the required stroke reduction is possible using the cushioning components (on the slide and in the end cap).

Advantages:

- Precision adjustment is accurately fixed by the clamping component
- No readjustment required, position is fully retained under lock and load

- Quick and easy adjustment, only one tool required

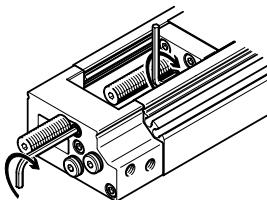

Step 1:
Loosen the clamping component

Step 2:
Position the slide by hand in the required end position

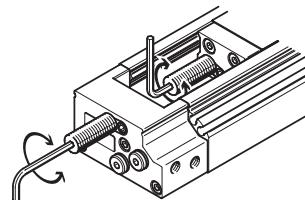

Step 3:
Turn the stop element with an Allen key until the end position is reached.

Step 4:
Tighten the clamping component

Step 1

Step 2 ... 4

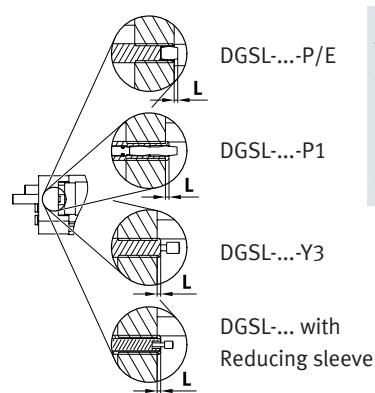

Adjustable end position range [mm] per end position / stroke reduction

Size	4	6	8	10	12	16	20	25

	E	-3.5	-3.5	-3.5	-5.5	-5.5	-5.5	-5.5	-5.5
	P1	-13.5	-15	-18.5	-20	-25.5	-39.5	-49.5	-49
	Y3	-	-	-14	-15	-25.5	-38.5	-42	-51.5
	1)	-	-	-	-15	-25.5	-38.5	-42	-51.5

1) With reducing sleeve and next smaller shock absorber.

Note
The distance L of the cushioning element (→ operating manual) must be maintained at all times (factory setting).

Note
The setting range of the advanced and retracted end position is restricted when using the cushioning type "E".

Datasheet

Shock absorber selection

Payload load m as a function of impact velocity v

With the mini slide DGSL, shock absorbers can be replaced and the cushioning behaviour can thus be influenced (depending on the payload).

This is done by removing the existing shock absorbers on the DGSL and replacing them with a smaller shock absorber as appropriate to the application.
→ description below)

Graphs

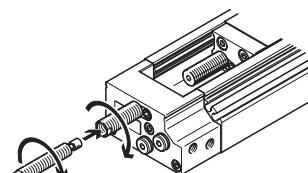

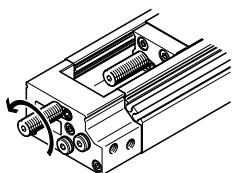

For selecting a suitable shock absorber as a function of the mounting position of the mini slide
→ from page 13

Ordering data

Shock absorbers DYSW, DYEF and reducing sleeve DAYH
→ Page 51

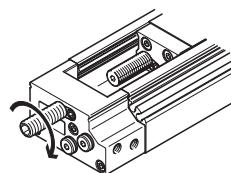

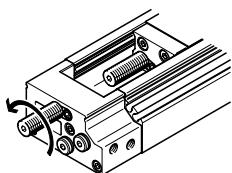

For smaller loads:

The next smaller shock absorber DYSW can be installed with the help of the reducing sleeve DAYH.

For very small loads:

The shock absorber DYEF can be installed.

Selection example:

Current drive:

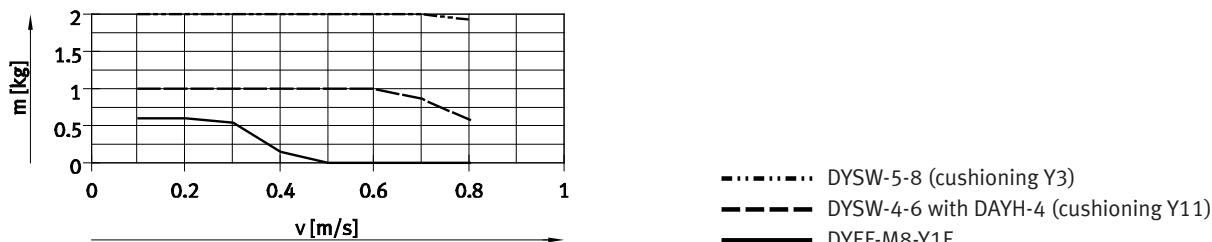

Mini slide: DGSL-10-...-Y3-A

Assuming:

Payload: 500 g

Impact velocity: 0.4 m/s

Mounting position: horizontal

Results:

The first cushioning curve, which is located above the intersection point, is the most suitable for this case.

Due to the low payload of less than one kilogram, the cushioning characteristics are greatly improved by replacing the shock absorber DYSW-5-8 integrated in the mini slide with the reducing sleeve DAYH-4 and the next smaller shock absorber DYSW-4-6.

Fundamentally, shock absorbers must be loaded.

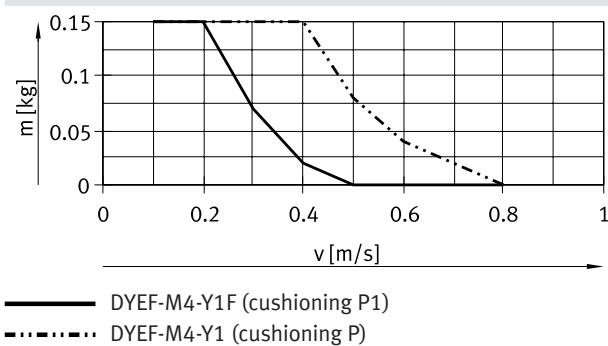

Since the shock absorber DYSW-4-6 is more fully utilised in this case, both the service life of the shock absorber and the cushioning characteristics are improved.

Vertical mounting position

The travel times for a vertical mounting position are calculated by multiplying the data for a horizontal mounting position by a correction factor ka (advancing) and ke (retracting), see adjacent table.

Assuming:
Stroke = 200 mm
Size = 20
Payload = 3 kg
Calculated travel time th (horizontal),
see graph:

- Advancing = 500 ms
- Retracting = 600 ms

Calculated travel time tv (vertical):

- Advancing: $tv = th \times ka$
 $ts = 500 \text{ ms} \times 0.9 = 450 \text{ ms}$
- Retracting: $tv = th \times ke$
 $ts = 600 \text{ ms} \times 1.1 = 660 \text{ ms}$

Stroke [mm]	Size	Advancing (ka) ¹⁾	Retracting (kr)
10	4, 6, 8, 10	0.95	1.1
	12, 16, 20, 25	0.95	1.2

Shock absorber selection

Travel time t as a function of payload m and cushioning P1 – horizontal mounting position

The values in the graphs are determined by calculation.

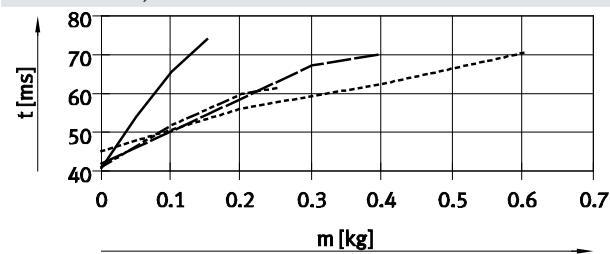

The travel time as a function of payload must not be reduced below the values shown, because the kinetic impact or residual energy in the end positions can result in damage to the drive.

Vertical mounting position

The travel times for a vertical mounting position are calculated by multiplying the data for a horizontal mounting position by a correction factor ka (advancing) and ke (retracting), see adjacent table.

Assuming:
Stroke = 200 mm
Size = 20
Payload = 2 kg
Calculated travel time th (horizontal),
see graph:
– Advancing = 640 ms
– Retracting = 780 ms
Calculated travel time tv (vertical):

- Advancing: $tv = th \times ka$
 $ts = 640 \text{ ms} \times 0.9 = 576 \text{ ms}$
- Retracting: $tv = th \times ke$
 $ts = 780 \text{ ms} \times 1.1 = 858 \text{ ms}$

Vertical mounting position

The travel times for a vertical mounting position are calculated by multiplying the data for a horizontal mounting position by a correction factor ka (advancing) and ke (retracting), see adjacent table.

Assuming:
Stroke = 200 mm
Size = 20
Payload = 10 kg
Calculated travel time th (horizontal),
see graph:
– Advancing = 405 ms
– Retracting = 490 ms

Calculated travel time tv (vertical):
– Advancing: $tv = th \times ka$
 $ts = 405 \text{ ms} \times 0.9 = 365 \text{ ms}$
– Retracting: $tv = th \times ke$
 $ts = 490 \text{ ms} \times 1.5 = 735 \text{ ms}$

Stroke [mm]	Size	Advancing (ka) ¹⁾	Retracting (kr)

Datasheet

Dynamic load values

The indicated torques refer to the centre of the guide.

These values must not be exceeded during dynamic operation.

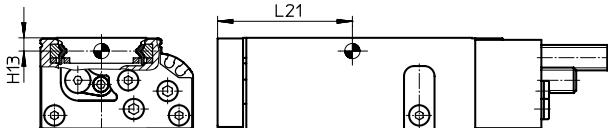

Special attention must be paid to the deceleration phase.

If the drive is simultaneously subjected to several of the forces and torques indicated below, the following equation must be satisfied in addition to the indicated maximum loads:

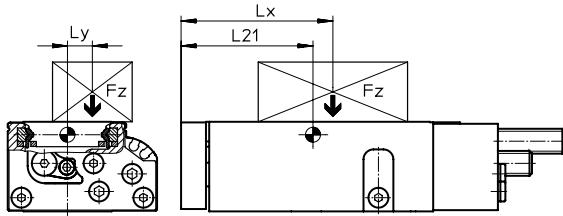

$$+ \frac{7,848 \text{ N}}{1200 \text{ N}} + \frac{0,236 \text{ Nm}}{18 \text{ Nm}} + \frac{0,886 \text{ Nm}}{12 \text{ Nm}} + 0 \leq 1$$

Position of the guide centre

Calculation example

Assuming:

Solution:

L21 = 83 mm from table

$F_y = 0 \text{ N}$

$F_z = m \times g$
 $= 0.8 \text{ kg} \times 9.81 \text{ m/s}^2 = 7.848 \text{ N}$

$M_x = m \times g \times L_y$
 $= 0.8 \text{ kg} \times 9.81 \text{ m/s}^2 \times 30 \text{ mm} = 0.236 \text{ Nm}$

$M_y = m \times g \times [(L21+\text{stroke}) - L_x]$
 $= 0.8 \text{ kg} \times 9.81 \text{ m/s}^2 \times [(83 \text{ mm} + 80 \text{ mm}) - 50 \text{ mm}] = 0.886 \text{ Nm}$

$M_z = 0 \text{ Nm}$

Mini slide = DGSL-10

Stroke length = 80 mm

Lever arm $L_x = 50 \text{ mm}$

Lever arm $L_y = 30 \text{ mm}$

Mass $F_z = 0.8 \text{ kg}$

Acceleration $a = 0 \text{ m/s}^2$

To be determined:

F_y, F_z, M_x, M_y, M_z

and

Verification of operation with combined load

Combined load:

$$+ \frac{7,848 \text{ N}}{1200 \text{ N}} + \frac{0,236 \text{ Nm}}{18 \text{ Nm}} + \frac{0,886 \text{ Nm}}{12 \text{ Nm}} + 0 \leq 1$$

$$0 + \frac{7,848 \text{ N}}{1200 \text{ N}} + \frac{0,236 \text{ Nm}}{18 \text{ Nm}} + \frac{0,886 \text{ Nm}}{12 \text{ Nm}} + 0 \leq 1$$

Datasheet**Function**

C – Clamping unit

E3 – End-position locking

- Ø - Size
6 ... 25

Sets of wearing parts
→ Page 45

- ⚡ - **Note**

Additional measures are required for use in safety-related applications; in Europe, for example, the standards listed under the EC Machinery Directive must be observed. Without additional measures in accordance with legally specified minimum requirements, the product is not suitable as a safety-related component in control systems.

General technical data – Clamping unit

Size	6	8	10	12	16	20	25
Function	• Mechanical clamping • For fixing the slide in any position • Frictional locking						
Type of clamping with effective direction	At both ends Clamping via spring force, release via compressed air						
Pneumatic connection	M5						
Mounting position	Any						
Static holding force [N]	80	80	180	180	350	350	600
Product weight [g]	10	10	15	15	50	50	50

Operating and environmental conditions – Clamping unit

Operating medium	Compressed air to ISO 8573-1:2010 [7:4:4]						
Note on the operating/pilot medium	Lubricated operation possible (in which case lubricated operation will always be required)						
Min. release pressure							
	[MPa]	0.3					
	[bar]	3					
Max. operating pressure							
	[MPa]	≤ 1					
	[bar]	≤ 10					

General technical data – End-position locking

Size	6	8	10	12	16	20	25
Function	• Mechanical locking when the end position is reached • For fixing the slide in the unpressurised, retracted state • Form-fitting						
Type of clamping with effective direction	At both ends Clamping via spring force, unlocked via compressed air						
Pneumatic connection	M5						
Mounting position	Any						
Static holding force [N]	60	60	160	160	250	380	640
Product weight [g]	13	13	26	26	64	64	65

Operating and environmental conditions – End-position locking

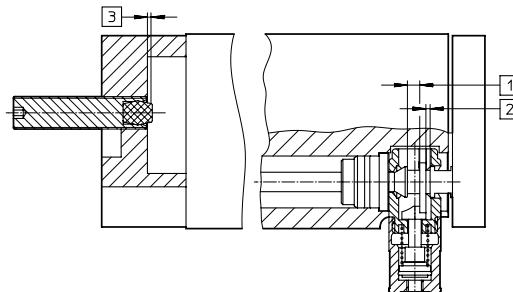

Operating medium	Compressed air to ISO 8573-1:2010 [7:4:4]						
Note on the operating/pilot medium	Lubricated operation possible (in which case lubricated operation will always be required)						
Operating pressure							
	[MPa]	0.3 ... 0.8					
	[bar]	3 ... 8					

Datasheet

Adjustable end-position range

When using end-position locking (E3), the adjustable end-position range, the retracted end position, is reduced by the following values.

- [1] Axial setting range
- [2] Max. cushioning stroke
- [3] Adjustable end-position range

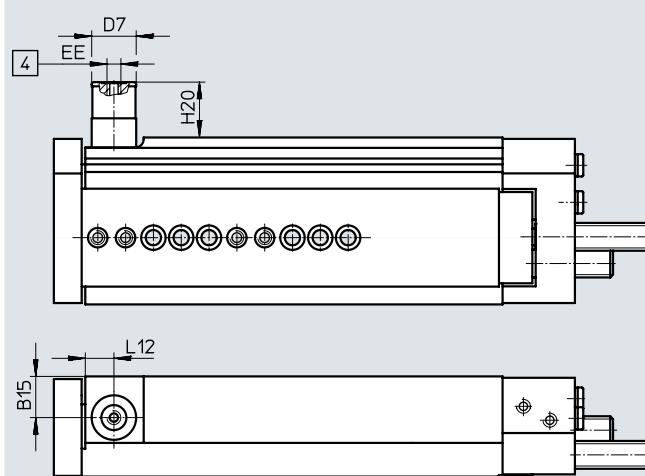

Size	[3]
6, 8	Max. 1.5 mm
10, 12	Max. 2.3 mm
16, 20, 25	Max. 2.7 mm

Note

With the 500 mm covers, the mounting hole must be made by the customer.

The cover can be shortened as required by the customer.

Accessories

Intermediate-position module

DADM

- The intermediate-position module enables an additional adjustable position within the stroke range. The module is attached separately, directly next to the mini slide. It can be mounted anywhere along the mini slide.
- The associated shock absorber retainer → page 50 can be attached at several points on the slide. The position can be precisely set with the help of the shock absorber.
- The stop lever positions can be sensed using proximity switches SME/SMT → page 53
- Push-in fittings are not included in the scope of delivery

Material:

Housing:

Wrought aluminium alloy

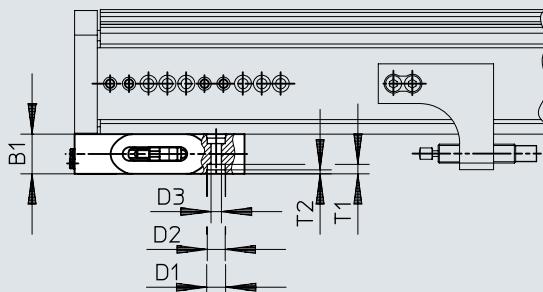

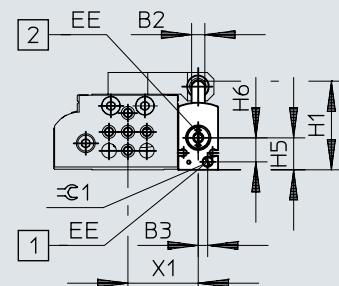

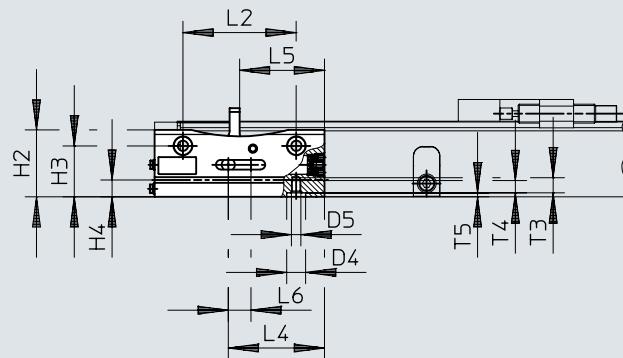

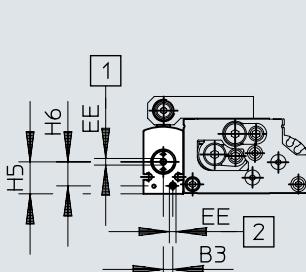

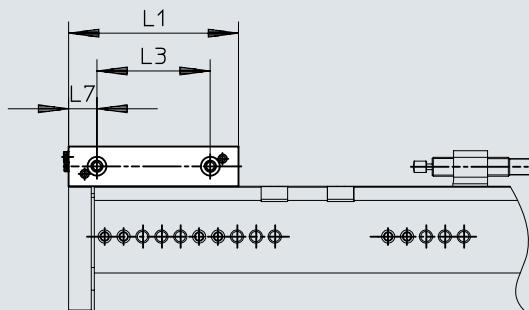

Lever:

High-alloy stainless steel

RoHS-compliant

1) Packaging unit

Mounting

To ensure that the shock absorber strikes the stop lever in the centre, we recommended mounting the intermediate-position module directly next to the mini slide (without a gap). It is fastened on the mounting surface using 2 screws and centring sleeves. The shock absorber retainer is then attached to the slide of the mini slide, also using 2 screws and centring sleeves.

Precision adjustment:

The position can be precisely adjusted via the screw-in depth of the shock absorber. The shock absorber must protrude by at least 1.5 mm.

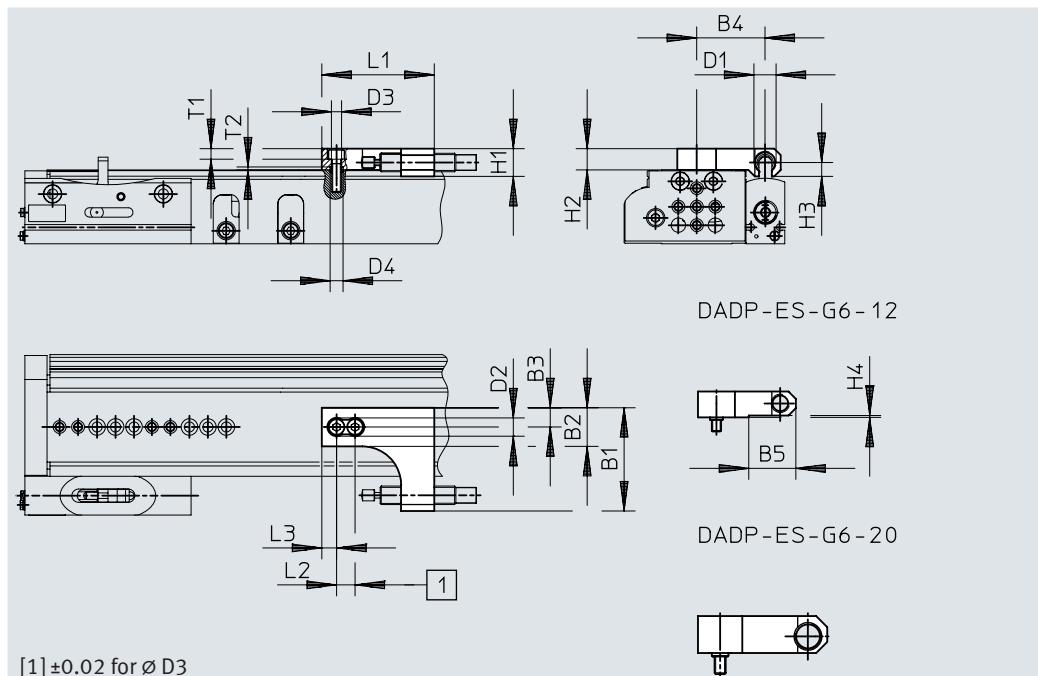

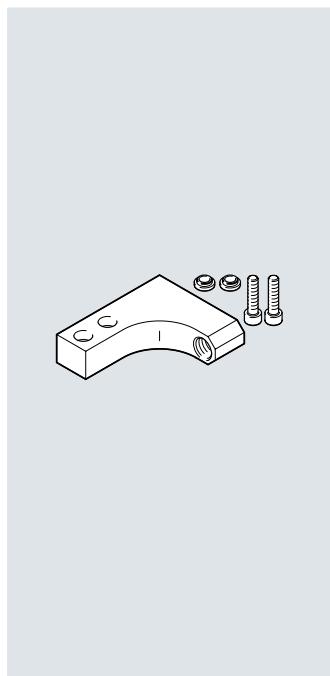

Accessories

Shock absorber retainer DADP

1) Packaging unit

Note

- A shock absorber retainer DADP-ES is additionally required when using an intermediate-position module

- Operation without cushioning components is not permitted
- Cushioning components are not included in the scope of delivery

- The size of the shock absorbers for the mini slides and for the relevant shock absorber retainer are identical. Shock absorber selection → page 51

- The same cushioning component as is used in the end positions of the mini slide is used for cushioning the intermediate position

Accessories

Adapter kit

Material:

Wrought aluminium alloy
RoHS-compliant

The kit includes the individual mounting interface as well as the necessary mounting material.

Permissible drive/drive combinations with adapter kit					Download CAD data → www.festo.com		
Combination	[1] Drive Size	[2] Drive Size	Adapter kit CRC ¹⁾	Part no.	Type	Quantity required	PU ²⁾

1) Corrosion resistance class CRC 2 to Festo standard FN 940070

Moderate corrosion stress. Indoor applications in which condensation can occur. External visible parts with primarily decorative surface requirements that are in direct contact with a normal industrial environment.

2) Packaging unit.

3) The screws listed are not included in the scope of delivery of the drives.

4) The centring sleeves are included in the scope of delivery of the drives.

Accessories

Adapter kit
HAPS, HMSV

Material:
 Wrought aluminium alloy
 RoHS-compliant

The kit includes the individual mounting interface as well as the necessary mounting material.
